

Radiation therapy planning with pet

- Radiation therapy planning with PET (Positron Emission Tomography) enhances precision in targeting cancer cells
- PET helps to visualize the metabolic activity of tumors, aiding in distinguishing between healthy and malignant tissues
- This accuracy improves treatment efficacy and minimizes damage to surrounding healthy tissue
- Integrating PET scans into radiation therapy plans optimizes dosages and positioning, leading to potentially better patient outcomes

Practical example: Hospitals

- In hospitals, radiation therapy planning often utilizes PET (Positron Emission Tomography) scans to treat cancer more effectively
- PET scans create detailed 3D images of the body, identifying both the location and the metabolism of cancer cells
- This precision allows doctors to tailor radiation doses precisely to the tumor's size and position, minimizing damage to surrounding healthy tissues
- Consequently, this targeted approach enhances the effectiveness of the treatment and reduces side effects

Tumor Response

Monitoring and Treatment Planning A. Heuck, P. Lukas, P. Kneschaurek, M. Mayr, 2013-12-11 Medical imaging progressed to a standard undreamt of not very many years ago The advances are due to continuous development of radiological techniques and the introduction of magnetic resonance imaging With the improved and new methods three dimensional target volumes for radiation therapy can be defined with hitherto unknown precision This leads to an improvement in irradiation techniques and as a consequence to a higher likelihood of tumor control and a lower risk of normal tissue complications Besides the

improvement in irradiation techniques the new imaging methods may enable great strides in tumor response monitoring not only in the detection of morphological alterations but also by showing physiological changes in the tumor during and after treatment by means of MRI and PET This not only leads to better prognostic information but may also allow early evaluation of the response to treatment It may then be possible to individualize the radiation dose but also the alternative treatment for non responders This is certainly a future direction for radiation oncology
