Radioactivity And Health A History:

Radioactivity and Health, 1988 This book is designed to be primarily a history of research facts measurements and ideas and the people who developed them Research is defined very broadly to include from bench top laboratory experiments to worldwide environmental investigations The book is not a monograph or a critical review The findings and conclusions are presented largely as the investigators saw and reported them Frequently the discussion utilizes the terminology and units of the time unless they are truly antiquated or potentially unclear It is only when the work being reported is markedly iconoclastic or obviously wrong that I chose to make special note of it or to correct it Nevertheless except for direct quotations the language is mine and I take full responsibility for it The working materials for this volume included published papers in scientific journals books published conferences and symposia personal interviews with over 100 individuals some of them more than once see Appendix A and particularly for the 1940 1950 decade and for the large government supported laboratories to the present day in house reports These reports frequently represent the only comprehensive archive of what was done and why Unfortunately this source is drying up because of storage problems and must be retrieved by ever more complex and inconvenient means For this reason special efforts have been taken to review and document these sources though even now some sections of the field are partially inaccessible Nevertheless the volume of all materials available for this review was surprisingly large and the quality much better than might have been expected for so complex and disparate a fields approached under conditions of considerable urgency
