Radionuclide Imaging In Drug Research:

Radionuclide Imaging in Drug Research Clive G. Wilson, 2012-12-06 The use of gamma emitting radionuclides for diagnostic imaging in nuclear medicine has been established for many years Sophisticated gamma ray detecting camera systems and computer links enable the clinical investigator to image different regions of the body and to quantify organ function Parallel developments have also occurred in the field of radiopharmaceuticals and today a wide range of products is available that will exhibit specific uptake within target tissues following parenteral administration For example radioiodide is taken up by the thyroid and iodinated fatty acids can be used to image the myocardium Labelled antibodies have been used with success to target certain tumours The concept of targeting has also been considered by pharmaceutical scientists who wish to deliver drugs rather than radionuclides to specific sites in the body The systems that have been employed are often physically similar to those used as radiopharmaceuticals for example colloids aerosols and liposomes Furthermore pioneering work by Digenis and others in the United States States and by Alpsten and co workers 1976 in Sweden had demonstrated the potential of gamma scintigraphy for investigating the fate of tablets and capsules in the gastrointestinal tract of man in a non invasive way In 1979 the Biopharmaceutics Research Group at Nottingham together with academic pharmacists from Manchester held a one day symposium at Nottingham University to discuss how radio nuclides could be used in drug formulation studies to provide better approaches for the delivery of drugs to their sites of action *Nuclear Imaging in Drug Discovery, Development, and Approval* BURNS, 2012-12-06 It is the purpose and business of the pharmaceutical industry to discover develop and make available drugs for the care of the sick The purpose of universities and national laboratories is to provide people and scientific knowledge that can help in the process This book presents the combined efforts of scientists from the drug industry academic laboratories and national laboratories to describe advances in radiotracer technology in studies on experimental animals and living human beings The authors believe that the technology is now ready for widespread application in the pharmaceutical industry The goal of this book is to help bring this about The field of Nuclear Medicine is based on the concept that if treatment of disease is chemical the patient's diagnosis should be chemical Anatomy and histopathology have been the principle basis for making a diagnosis Histopathologic data suffer from being descriptive subjective not quantifiable and based on the study of dead tissue The era of histopathology as the dominant concept in medical practice is coming to an end Histopathologic findings are often heterogeneous and a single biopsy will at times not reveal the true nature of the disease such as the grading of malignancy Far greater accuracy of staging of disease and in the planning of treatment is possible through chemistry as well as by making possible a more suitable selection of a histological biopsy site **Nuclear Imaging in Drug Discovery, Development, and Approval** Hugh Donald Burns, 1993 **Nuclear Imaging in Drug Discovery, Development and Approval** , 1991 **Nuclear Imaging in Drug Discovery, Development, and Approval** 3 Island Press, 1993-01-01 *Nuclear Medicine in Pharmaceutical Research* M. Anderson,Sung Wan Kim,2012-12-06 The evident rapid expansion of scientific work and intense interest in both experimental and clinical aspects of new drug delivery systems provided strong motivation for planning this symposium In designing the program speakers were identified for their particular expertise in a wide range of topics such as dermal delivery systems pro drugs oral prolonged release rate controlled drug delivery the pharmacokinetics of drug release systems the synthesis of polymeric drug carriers and the refinement of drug delivery pumps Because of the considerable involvement of diverse scientists from laboratories around the world where investigations relevant to the topic are now being pursued a deliberate effort was made to invite international leaders in the field to share their knowledge and experimental outcomes Thus plenary papers and panel discussions were offered by organic chemists bioengineers pathologists material scientists physical chemists and pharmacokineticists from academic and industrial laboratories in some dozen countries This book which records the presentations offered at the symposium covers a broad array of topics ranging from general overviews of the physicochemical concepts and analytical methodology which underpin the refinement of drug delivery systems and the tissue responses associated with the use of such systems through detailed discussions of a variety of current approaches employed in the development of new systems **Current Catalog** National Library of Medicine (U.S.),1982 First multi year cumulation covers six years 1965 70 Research in Progress United States.
