Ordinary Cities Jennifer Robinson, 2013-07-04 With the urbanization of the world's population

proceeding apace and the equally rapid urbanization of poverty urban theory has an urgent challenge to meet if it is to remain relevant to the majority of cities and their populations many of which are outside the West This groundbreaking book establishes a new framework for urban development It makes the argument that all cities are best understood as ordinary and crosses the longstanding divide in urban scholarship and urban policy between Western and other cities especially those labelled Third World It considers the two framing axes of urban modernity and development and argues that if cities are to be imagined in equitable and creative ways urban theory must overcome these axes with their Western bias and that resources must become at least as cosmopolitan as cities themselves Tracking paths across previously separate literatures and debates this innovative book a postcolonial critique of urban studies traces the outlines of a cosmopolitan approach to cities drawing on evidence from Rio Johannesburg Lusaka and Kuala Lumpur Key urban scholars and debates from Simmel Benjamin and the Chicago School to Global and World Cities theories are explored together with anthropological and developmentalist accounts of poorer cities Offering an alternative approach Ordinary Cities skilfully brings together theories of urban development for students and researchers of urban studies geography and development

Jungles Hide Cities

Glen Earthsong, 2025-03-21 What if vast undiscovered cities lie hidden beneath the seemingly impenetrable rainforests of our planet Jungles Hide Cities unveils the groundbreaking discoveries made possible by LiDAR Light Detection and Ranging technology and presents compelling evidence of extensive previously unknown ancient ruins buried beneath dense jungle canopies This interdisciplinary work bridges the gap between history earth sciences and geography revealing a new understanding of human civilization and its interaction with the environment The book argues that the application of advanced remote sensing techniques specifically LiDAR is revolutionizing our comprehension of past civilizations It challenges long held assumptions about the limitations of ancient societies and their ability to thrive in challenging environments We explore the significance of these findings emphasizing how they reshape our understanding of human history technological advancement and the impact of past societies on the environment We will provide the reader with a fundamental background in remote sensing technologies specifically focusing on how LiDAR works and its advantages over traditional archaeological methods in dense environments A basic understanding of archaeological survey techniques geographical information systems GIS and climate science will prove beneficial but is not essential as we explain these clearly The central argument posits that rainforests often perceived as barriers to civilization were in fact home to sophisticated densely populated societies that significantly altered their landscapes These societies contrary to popular belief possessed advanced knowledge of resource management engineering and urban planning This viewpoint compels us to reconsider the narrative of human progress appreciating the ingenuity and adaptability of past civilizations in diverse ecological settings The book is structured systematically It begins by introducing the core concepts of LiDAR technology and its application in archaeological research The initial chapters present case studies from various regions detailing the

discovery and analysis of hidden urban centers We then shift to exploring the societal structures economic systems and environmental practices of these rediscovered civilizations The penultimate section explores the implications of these discoveries for our understanding of human history technological development and environmental adaptation Finally we conclude with a discussion of the ethical considerations involved in researching and preserving these sites along with potential applications for sustainable development and heritage management The evidence presented will largely consist of LiDAR derived maps archaeological data from limited excavations and comparative analyses of known historical sites We analyze the LiDAR data and compare it with surface level archaeological findings historical records and environmental data to provide a holistic view of these ancient societies Jungles Hide Cities draws connections between archaeology remote sensing climate science and historical anthropology The integration of these disciplines provides a more comprehensive understanding of the interplay between human activity and the environment The book offers a fresh perspective by utilizing cutting edge technology to challenge established historical narratives It moves beyond traditional ground based archaeology to reveal a hidden history of human ingenuity and adaptation We present a shift from conventional archaeological methods by focusing on a non invasive methodology to identify large scale environmental and structural changes The approach is factual and evidence based presented in a clear and accessible style suitable for a broad audience While maintaining academic rigor the book avoids jargon and employs narrative techniques to engage the reader and make complex information understandable The target audience includes anyone interested in archaeology history geography environmental studies and technological innovation The book will appeal to readers curious about the past and interested in the potential of technology to reshape our understanding of human history and our planet As a work of non fiction in the history earth sciences and geography genres Jungles Hide Cities adheres to the principles of accuracy objectivity and clear communication The book focuses primarily on the application of LiDAR technology to uncover hidden urban centers in rainforest environments The scope is limited to regions where LiDAR data has been extensively collected and analyzed While the book will reference other archaeological sites and historical periods for comparative purposes the primary focus remains on the discoveries made through LiDAR technology in rainforest regions The insights gained from this research can be applied to a variety of real world situations The knowledge of sustainable land management practices employed by ancient rainforest civilizations can inform modern conservation efforts Understanding how past societies adapted to environmental change can help us in addressing current climate challenges The book will touch on debates surrounding the role of human activity in shaping rainforest ecosystems The extent of human impact on the environment during ancient times will be explored potentially challenging prevailing narratives about pristine landscapes

The Oxford Handbook of Cities in World History Peter Clark, 2013-02-14 In 2008 for the first time the majority of the planet's inhabitants lived in cities and towns Becoming globally urban has been one of mankind's greatest collective achievements over time Written by leading scholar this is the first

detailed survey of the world's cities and towns from ancient times to the present day **Ecology of Tropical Cities, Volume I** Fabio Angeoletto, Piotr Tryjanowski, Mark D. E. Fellowes, 2025-04-15 This contributed volume addresses the global scale of urbanization and its impacts on biodiversity. By adding human capital, cities are incubators for new ideas and technologies creating the possibility for socially and environmentally sensitive growth, but this is rarely seen. Urban ecology, an essential field that supports planning based on environmental perspectives, is a new science in tropical countries. This book discusses the social inequity embedded in tropical cities and explores how this inequity also materializes in biodiversity with poor neighborhoods of tropical cities lacking sufficient access to green space and therefore reduced access to the benefits of nature and poor support for biodiversity. With the current biodiversity crisis, the traditional approach to protecting pristine areas is insufficient. The chapters in this volume illustrate how tropical cities can act as spaces for biological conservation. Ecological literacy can help cities reconcile the needs of both people and of nature. This book compiles studies by experts from more than 100 institutions and 29 countries on the ecology and biodiversity of tropical cities at multiple scales and applies their studies to urban planning and management. The audience for this book includes researchers, students, and professionals working on environmental, social, economic, cultural, political, architectural, and development projects in urban areas, offering a deep and timely discussion of their influence on the fauna and flora of tropical cities. *Developing Living Cities*, 2010 This is an important and timely book. With half of humanity living in cities, our future will depend on how well we manage our cities. This book poses six inter-generational challenges to cities. If a city deals successfully with them, it will become a living, thriving, prosperous, and delightful place to live, work, and visit. Prof. Tommy Koh, Chairman, Governing Council, Asia Pacific Water Forum **Water and Sanitation in the World's Cities** UN-Habitat, 2013-06-17 This is surely the most impressive and important publication to come out of the UN system for many years. Peter Adamson, founder, New Internationalist and author and researcher of UNICEF's *The State of the World's Children* from 1980 to 1995. The world's governments agreed at the Millennium Summit to halve by 2015 the number of people who lack access to safe water. With rapidly growing urban populations, the challenge is immense. *Water and Sanitation in the World's Cities* is a comprehensive and authoritative assessment of the problems and how they can be addressed. This influential publication by the United Nations Human Settlements Programme (UN HABITAT) sets out in detail the scale of inadequate provision of water and sanitation. It describes the impacts on health and economic performance, showing the potential gains of remedial action; it analyses the proximate and underlying causes of poor provision and identifies information gaps affecting resource allocation; it outlines the consequences of further deterioration and explains how resources and institutional capacities (public, private, and community) can be used to deliver proper services through integrated water resource management. **Water and Sanitation in the World's Cities** United Nations Human Settlements Programme, 2003 This is surely the most impressive and important publication to come out of the UN system for many years. author and researcher of UNICEF's *The State of the World's Children* from 1980 to 1995. The world's governments agreed at the Millennium Summit to halve by 2015 the number of people who lack access to safe water. With rapidly growing urban populations, the challenge is immense. *Water and Sanitation in the World's Cities* is a comprehensive and authoritative assessment of the problems and how they can be addressed. This influential publication by **Developing Frontier Cities** Harvey Lithwick and Yehuda Gradus, 2013-04-17. The Unique Nature of Frontier Cities and their Development Challenge. Harvey Lithwick and Yehuda Gradus. The advent of government downsizing and globalization has led to enormous competitive pressures as well as the opening of new opportunities. How cities in remote frontier areas might cope with what for them might appear to be a devastating challenge is the subject of this book. Our concern is with frontier cities in particular. In our earlier study *Frontiers in Regional Development* Rowman and Littlefield 1996 we examined the distinction between frontiers and peripheries. The terms are often used interchangeably but we believe that in fact both in scholarly works and in popular usage very different connotations are conveyed by these concepts. Frontiers evoke a strong positive image of sparsely settled territories offering challenges, adventure, unspoiled natural landscapes and a different and for many an attractive life style. Frontiers are lands of opportunity. Peripheries conjure up negative images of inaccessibility, inadequate services and political and economic marginality. They are places to escape from rather than frontiers which is where people escape to. Peripheries are places of and for losers. *Tales of the Vibrant Cities of South America* MD Sharr, 2011-01-01. *Tales of the Vibrant Cities of South America* is a vivid journey through the continent's diverse and dynamic urban centers where tradition and modernity blend seamlessly. The book explores cities like São Paulo, Mendoza, Quito and Buenos Aires, each with a unique story shaped by geography, history and people. It captures the spirit of these cities not just as places but as living entities filled with character, resilience and culture. From the Andes to the Amazon, the natural landscape plays a vital role in shaping urban life. The book examines how cities evolve while maintaining their identity, balancing heritage with innovation. It doesn't shy away from modern challenges such as urbanization and inequality, offering a balanced portrayal. Through the voices and stories of local people, it celebrates the soul of South America's cities. More than travel writing, it's an invitation to feel, explore and connect with the continent's rich urban tapestry. **The Routledge Handbook of Sustainable Cities and Landscapes in the Pacific Rim** Yizhao Yang, Anne Taufen, 2022-03-17. This handbook addresses a growing list of challenges faced by regions and cities in the Pacific Rim, drawing connections around the what, why and how questions that are fundamental to sustainable development policies and planning practices. These include the connection between cities and surrounding landscapes across different boundaries and scales, the persistence of environmental and development inequities and the growing impacts of global climate change, including how physical conditions and social implications are being anticipated and addressed. Building upon localized knowledge and contextualized experiences, this edited collection brings attention to place-based approaches across the Pacific Rim and makes an important contribution to the scholarly and practical understanding

of sustainable urban development models that have mostly emerged out of the Western experiences. Nine sections each grounded in research dialogue and collaboration with practical examples and analysis focus on a theme or dimension that carries critical impacts on a holistic vision of city landscape development such as resilient communities, ecosystem services and biodiversity, energy, water, health and planning and engagement. This international edited collection will appeal to academics and students engaged in research involving landscape architecture, architecture, planning, public policy, law, urban studies, geography, environmental science and area studies. It also informs policy makers, professionals and advocates of actionable knowledge and adoptable ideas by connecting those issues with the Sustainable Development Goals (SDGs) of the United Nations. The collection of writings presented in this book speaks to multiyear collaboration of scholars through the APRU Sustainable Cities and Landscapes (SCL) Program and its global network facilitated by SCL Annual Conferences and involving more than 100 contributors from more than 30 institutions. Creating Regenerative Cities Herbert Girardet, 2014-09-19 Large modern cities have effectively declared their independence from nature But while they take up only three percent of the world's land

surface their ecological footprints actually cover the entire globe Humanity is building an urban future yet urban resource use is threatening the future of humanity and the natural world To meet the aspirations of city people in both developing and developed countries bold new initiatives are needed Modern cities are an astonishing human achievement As centres of innovation they are humanity's cultural playgrounds Their communication and transport systems have developed a global reach They are attractive to investors because they can offer a vast variety of services at comparatively low per capita costs But are they viable as ecological systems The planning of new cities as well as the retrofit of existing cities needs to undergo a profound paradigm shift Mere sustainable development is not enough To be compatible with natural systems cities need to move away from linear systems of resource use and learn to operate as closed loop circular systems To ensure their long term future they need to develop an environmentally enhancing restorative relationship between themselves and the natural systems on which they still depend Creating Regenerative Cities is a concise solution oriented manual for creating regenerative urbanisation A wide range of technical management and policy solutions already exist but implementation has been too slow and too little in large part because the kinds of holistic approaches needed are still unfamiliar to fragmented and process driven urban policy making and governance Herbert Girardet's 30 years experience as an ecologist thinker film maker and consultant working around the world has created this unique combination of tried and tested best practices and policies which outlines the fundamental shifts needed in the way we think about our cities
