Living in a Dynamic Tropical Forest Landscape Nigel Stork, Stephen M. Turton, 2009-01-26 This book brings together a wealth of scientific findings and ecological knowledge to survey what we have learned about the Wet Tropics rainforests of North Queensland Australia This interdisciplinary text is the first book to provide such a holistic view of any tropical forest environment including the social and economic dimensions The most thorough assessment of a tropical forest landscape to date Explores significant scientific breakthroughs in areas including conservation genetics vegetation modeling agroforestry and revegetation techniques biodiversity assessment and modeling impacts of climate change and the integration of science in natural resource management Research achieved in part due to the Cooperative Research Centre for Tropical Rainforest Ecology and Management the Rainforest CRC Written by a number of distinguished international experts contains chapter summaries and section commentaries

Creature Corridors Billie Rooney, 2025 Creatures are on the move Wild animals often travel to find food shelter or a place to breed But this is becoming more difficult and dangerous as construction and land clearing are affecting their habitat Creature Corridors follows kangaroos koalas birds fish crabs cassowaries and lizards through wildlife corridors that exist across forests rivers and seas These corridors provide paths and spaces for them to move around safely Discover how we can share our world with animals in this delightful and engaging story

Governing the Rainforest Eve Z. Bratman, 2019-09-24 Sustainable development is often thought of as a product that can be obtained by following a prescribed course of interventions Rather than conceptualizing it as a sweet spot of economic ecological and social balance sustainable development is an ongoing process of embroilments requiring constant negotiation of often competing aims Sustainable development politics yield highly uneven results among different members of society and different geographic areas As this book argues such imbalances mean that sustainable development processes often prioritize economic over environmental goals perpetuating and reinforcing economic and political inequalities Governing the Rainforest looks at development and conservation efforts in the Brazilian Amazon where the government and corporate interests bump up against those of environmentalists and local populations This book asks why sustainable development continues to be such a powerful and influential idea in the region and what impact it has had on various political and economic interests and geographic areas In other words as Eve Z Bratman argues sustainable development is a political practice in itself This book offers detailed case study analysis including of the creation of vast conservation corridors the construction of one of the largest hydroelectric plants in the world and new forms of land settlement projects Based on a decade of Bratman's ethnographic fieldwork throughout Brazil and particularly along the Trans Amazonian Highway Governing the Rainforest offers a fresh take on sustainable development within a multi level analysis of actors discourses and practices

**Rain Forests** HaiSong Harvey, 2002 Rain forests contain the greatest variety of animal and plant life on earth

and they are being destroyed more rapidly than any other type of wild habitat Many environmentalists and scientists believe that almost all the rain forests will be eliminated in less than thirty years Others continue to believe that the threat of their destruction is exaggerated This anthology debates the threats to the rain forests and measures designed to ensure their continued existence     **Forests and Insects** Allan D. Watt,Nigel E. Stork,Mark D. Hunter,1997-09-30 This book covers the full breadth of forest entomology It combines the work of forest entomologists working on the impact and management of forest pests with those involved in diversity assessment and conservation of insects in forests Forests and Insects demonstrates that both these disciplines demand an understanding of population and community biology The book covers such topics as colonization of trees by insects population dynamics of forest insects insect natural enemies the effects of climate change and pollution on forest pests spatial variation in the abundance of insects the mineralization of carbon by termites the impact of herbivorous insects and the conservation of forest insect diversity including the effects of forest fragmentation and deforestation This Royal Entomological Society Symposium volume will be of great interest to all agricultural and forest entomologists population and community biologists pest management specialists and anyone concerned with the conservation of forest biodiversity     **Corridor Ecology** Jodi A. Hilty,William Z. Lidicker Jr.,Adina M. Merenlender,2012-02-13 Corridor Ecology presents guidelines that combine conservation science and practical experience for maintaining enhancing and creating connectivity between natural areas with an overarching goal of conserving biodiversity It offers an objective carefully interpreted review of the issues and is a one of a kind resource for scientists landscape architects planners land managers decision makers and all those working to protect and restore landscapes and species diversity     **Rainforest Restoration Manual for South-eastern Australia** Bill Peel,2010 East Gippsland Catchment Management Authority     **The regional travel guide for Tshopo (Democratic Republic of the Congo)** ,2025-09-24

**Agroforestry and Biodiversity Conservation in Tropical Landscapes** Götz Schroth,Gustavo A. B. da Fonseca,Celia A. Harvey,Claude Gascon,Heraldo L. Vasconcelos,Anne-Marie N. Izac,2013-03-22 Agroforestry the practice of integrating trees and other large woody perennials on farms and throughout the agricultural landscape is increasingly recognized as a useful and promising strategy that diversifies production for greater social economic and environmental benefits Agroforestry and Biodiversity Conservation in Tropical Landscapes brings together 46 scientists and practitioners from 13 countries with decades of field experience in tropical regions to explore how agroforestry practices can help promote biodiversity conservation in human dominated landscapes to synthesize the current state of knowledge in the field and to identify areas where further research is needed Agroforestry and Biodiversity Conservation in Tropical Landscapes is the first comprehensive synthesis of the role of agroforestry systems in conserving biodiversity in tropical landscapes and contains in depth review chapters of most agroforestry systems with examples from many different countries It is a valuable source of information for scientists researchers professors and students in the fields of conservation biology resource management

tropical ecology rural development agroforestry and agroecology      Corridor Ecology, Second Edition Jodi A. Hilty, Annika T.H. Keeley, William Z. Lidicker Jr., Adina M. Merenlender, 2019-04-23 Migrating wildlife species across the globe face a dire predicament as their traditional migratory routes are cut off by human encroachment. Forced into smaller and smaller patches of habitat, they must compete more aggressively for dwindling food resources and territory. This is more than just an unfortunate side effect of human progress. As key species populations dwindle, ecosystems are losing resilience and face collapse, and along with them the ecosystem services we depend on. Healthy ecosystems need healthy wildlife populations. One possible answer: Wildlife corridors that connect fragmented landscapes. This new and expanded second edition of Corridor Ecology: Linking Landscapes for Biodiversity Conservation and Climate Adaptation captures the many advances in the field over the past ten years. It builds on concepts presented in the first edition on the importance and practical details of maintaining and restoring land connectivity. New to this edition is a guest edited chapter on ecological connectivity in oceans, including a detailed discussion on pelagic marine corridors and how coastal corridors can provide critical connectivity between marine protected areas. Another new chapter considers the effects of climate change on habitat and offers recommendations on designing effective corridors as landscapes change with shifting climate conditions. The book also includes a discussion of corridors in the air for migrating flying species, from birds to bats, butterflies, and even plant propagules, a concept so new that a term to describe it has yet to be coined. All chapters are thoroughly revised and updated. Practitioners as well as serious scholars of landscape ecology and the science of protecting biodiversity will find this new edition of corridor ecology science an indispensable resource.      Landscape Approaches in Mammalian Ecology and Conservation William Z. Lidicker, 1995 This book explores the latest ideas about landscapes as they apply to mammalian ecology and conservation. The contributors examine mammalian field studies and experimental model systems to landscape ecology and then present data on the use of such experimental protocols. With its international perspective and incisive coverage, this volume will be an essential resource for anyone concerned with mammalian and landscape ecology.

*Linkages in the Landscape* Andrew F. Bennett, 2003 The loss and fragmentation of natural habitats is one of the major issues in wildlife management and conservation. Habitat corridors are sometimes proposed as an important element within a conservation strategy. Examples are given of corridors both as pathways and as habitats in their own right. Includes detailed reviews of principles relevant to the design and management of corridors, their place in regional approaches to conservation planning, and recommendations for research and management.      The Secrets of the Rainforest Pasquale De Marco, 2025-03-02 In the heart of our planet where nature's secrets unfold lies a realm of wonder and mystery: the rainforest. Within its lush depths, an intricate symphony of life plays out where towering trees reach for the sky and a kaleidoscope of colors dances in the dappled sunlight. **Biodiversity and Environmental Change** Emma Burns,David Lindenmayer,Andrew Lowe,Nicole Thurgate,2014-02-06 Annotation Long term ecological data are critical for informing long term trends in biodiversity and trends in environmental change The Terrestrial Ecosystem Research Network TERN is a major initiative of the Australian Government and one of its key areas of investment is to provide funding for a network of long term ecological research plots around Australia LTERN This book highlights some of the temporal changes in the environment and or in biodiversity that have occurred in different ecosystems ranging from tropical rainforests wet eucalypt forests and alpine regions through to rangelands and deserts Many important trends and changes are documented and they often provide new insights that were previously poorly understood or unknown These data are precisely the kinds of data so desperately needed to better quantify the temporal trajectories in the environment and biodiversity in Australia **British Columbia's Inland Rainforest** Susan Stevenson,2011-07 The vast temperate rainforests of coastal British Columbia are world renowned but much less is known about the other rainforest located 500 kilometres inland along the western slopes of the interior mountains The unique integration of continentality and humidity in this region favours the development of lush rainforest communities that

incorporate both coastal and boreal elements In British Columbia s Inland Rainforest scientists bring together for the first time a broad spectrum of information about this distinctive ecosystem They also consider the ecological consequences of human activities in the rainforest and present strategies for its management and conservation Controlling Tropical Deforestation Alan Grainger,2013-11-05 Tropical rain forest is being cleared so rapidly and on such a scale that it is a major global environmental problem threatening the survival of half of the world s plant and animal species and contributing to global climate change through the greenhouse effect But despite widespread concern for over twenty years only limited progress has been made in controlling deforestation and improving forest management in the humid tropics In this book Alan Grainger offers afresh analysis of the causes of deforestation and presents an integrated strategy for controlling it His strategy embraces agriculture forestry and conservation and stresses the need for changes in government policies if land use is to be made more sustainable and the underlying causes of the problem are to be addressed Controlling Tropical Deforestation is essential reading for policy makers agronomists foresters conservationists and development professionals To general readers and students on introductory courses at schools and universities it also offers the first concise but comprehensive overview of the causes scale and consequences of deforestation Alan Grainger is a lecturer in geography at the University of Leeds He is author of The Threatening Desert Controlling Desertification also published by Earthscan Originally published in 1992 The Economics of Ecosystems and Biodiversity in National and International Policy Making Patrick ten Brink,2012-09-10 The Economics of Ecosystems and Biodiversity TEEB study is a major international initiative drawing attention to local national and global economic benefits of biodiversity to highlight the growing costs of biodiversity loss and ecosystem degradation the benefits of investing in natural capital and to draw together expertise from the fields of science economics and policy to enable practical actions Drawing on a team of more than one hundred authors and reviewers this book demonstrates the value of ecosystems and biodiversity to the economy society and individuals It underlines the urgency of strategic policy making and action at national and international levels and presents a rich evidence base of policies and instruments in use around the world and a wide range of innovative solutions It highlights the need for new public policy to reflect the appreciation that public goods and social benefits are often overlooked and that we need a transition to decision making which integrates the many values of nature across policy sectors It explores the range of instruments to reward those offering ecosystem service benefits such as water provision and climate regulation It looks at fiscal and regulatory instruments to reduce the incentives of those running down our natural capital and at reforming subsidies such that they respond to current and future priorities The authors also consider two major areas of investment in natural capital protected areas and investment in restoration Overall the book underlines the needs and ways to transform our approach to natural capital and demonstrates how we can practically take into account the value of ecosystems and biodiversity in policy decisions at national and international levels to promote the protection of our environment and

contribute to a sustainable economy and to the wellbeing of societies      Conservation and Environmental Management in Madagascar Ivan R. Scales, 2014-03-14 Madagascar is one of the most biologically diverse places on the planet the result of 160 million years of isolation from the African mainland More than 80% of its species are not found anywhere else on Earth However this highly diverse flora and fauna is threatened by habitat loss and fragmentation and the island has been classified as one of the world's highest conservation priorities Drawing on insights from geography anthropology sustainable development political science and ecology this book provides a comprehensive assessment of the status of conservation and environmental management in Madagascar It describes how conservation organisations have been experimenting with new forms of protected areas community based resource management ecotourism and payments for ecosystem services But the country must also deal with pressing human needs The problems of poverty development environmental justice natural resource use and biodiversity conservation are shown to be interlinked in complex ways Authors address key questions such as who are the winners and losers in attempts to conserve biodiversity And what are the implications of new forms of conservation for rural livelihoods and environmental justice
