Expert Evidence and Scientific Proof in Criminal Trials Paul Roberts,2017-07-05 Forensic science evidence and expert witness testimony play an increasingly prominent role in modern criminal proceedings Science produces powerful evidence of criminal offending but has also courted controversy and sometimes contributed towards miscarriages of justice The twenty six articles and essays reproduced in this volume explore the theoretical foundations of modern scientific proof and critically consider the practical issues to which expert evidence gives rise in contemporary criminal trials The essays are prefaced by a substantial new introduction which provides an overview and incisive commentary contextualising the key debates The volume begins by placing forensic science in interdisciplinary focus with contributions from historical sociological Science and Technology Studies STS philosophical and jurisprudential perspectives This is followed by closer examination of the role of forensic science and other expert evidence in criminal proceedings exposing enduring tensions and addressing recent controversies in the relationship between science and criminal law A third set of contributions considers the practical challenges of interpreting and communicating forensic science evidence This perennial battle continues to be fought at the intersection between the logic of scientific inference and the psychology of the fact finder's common sense reasoning Finally the volume's fourth group of essays evaluates the limited success of existing procedural reforms aimed at improving the reception of expert testimony in criminal adjudication and considers future prospects for institutional renewal with a keen eye to comparative law models and experiences success stories and cautionary tales **Brave new words** Jeff Prucher,

Anti-Ageing Medicines Dr. Marios Kyriazis,2012-01-01 An in depth analysis of the benefits limitations and side effects of the most commonly used anti ageing medicines **Elizabeth Blackburn and the Story of Telomeres**

Catherine Brady,2009-02-13 The story of molecular biologist Elizabeth Blackburn and her groundbreaking research on telomeres and what it reveals about the resourceful opportunism that characterizes the best scientific thinking Molecular biologist Elizabeth Blackburn one of Time magazine's 100 Most Influential People in the World in 2007 made headlines in 2004 when she was dismissed from the President's Council on Bioethics after objecting to the council's call for a moratorium on stem cell research and protesting the suppression of relevant scientific evidence in its final report But it is Blackburn's groundbreaking work on telomeric DNA which launched the field of telomere research that will have the more profound and long lasting effect on science and society In this compelling biography Catherine Brady tells the story of Elizabeth Blackburn's life and work and the emergence of a new field of scientific research on the specialized ends of chromosomes and the enzyme telomerase that extends them In the early stages of telomere research telomerase heralded as a potential cure for cancer and diseases related to aging attracted the voracious interest of biotech companies The surrounding hype succeeded in confusing the role of telomerase in extending the life of a cell with a mechanism that might extend the lifespan of an entire

organism In Brady's hands Blackburn's story reveals much about the tension between pure and applied science the politicking that makes research science such a competitive field and the resourceful opportunism that characterizes the best scientific thinking Brady describes the science accessibly and compellingly She explores Blackburn's struggle to break down barriers in an elite male dominated profession her role as a mentor to other women scientists many of whom have made their mark in telomere research and the collaborative nature of scientific work This book gives us a vivid portrait of an exceptional woman and a new understanding of the combination of curiosity imaginative speculation and aesthetic delight that powers scientific discovery
