Revolution in the earth sciences - advances in past half century S.J. BOARDMAN, The Advance of Science in the Last Half-century Thomas Henry Huxley, 1898 **Surge Tectonics: A New Hypothesis of Global Geodynamics** Arthur A. Meyerhoff, I. Taner, A.E.L. Morris, W.B. Agocs, M. Kamen-Kaye, Mohammad I. Bhat, N. Christian Smoot, Dong R. Choi, 2012-12-06 TECTONICS AND PHYSICS Geology although rooted in the laws of physics rarely has been taught in a manner designed to stress the relations between the laws and theorems of physics and the postulates of geology The same is true of geophysics whose specialties seismology gravimetry magnetism magnetotellurics deal only with the laws that govern them and not with those that govern geology's postulates The branch of geology and geophysics called tectonophysics is not a formalized discipline or subdiscipline and therefore has no formal laws or theorems of its own Although many recent books claim to be textbooks in tectonophysics they are not they are books designed to explain one hypothesis just as the present book is designed to explain one hypothesis The textbook that comes closest to being a textbook of tectonophysics is Peter 1 Wyllie's 1971 book *The Dynamic Earth* Teachers students and practitioners of geology since the very beginning of earth science teaching have avoided the development of a rigorous but not rigid scientific approach to tectonics largely because we earth scientists have not fully understood the origin of the features with which we are dealing This fact is not at all surprising when one considers that the database for hypotheses and theories of tectonics particularly before 1960 has been limited to a small part of the exposed land area on the Earth's surface **New Publications of the U.S. Geological Survey**, 1984 **Publications of the Geological Survey** Geological Survey (U.S.), 1984 **Revolution in the Earth Sciences** Shelby J. Boardman, 1983 **U.S. Geological Survey Professional Paper**, 1984 Assessing the Geochemical Fate of Deep-well-injected Hazardous Waste Russell Boulding, 1990 Geological Survey of Canada, Open File 2167,

Submarine Fans and Related Turbidite Systems Arnold H. Bouma, W.R. Normark, N.E. Barnes, 2012-12-06 Exchange of information in the field of earth sciences is increasingly needed to stay informed about advances However the continuous increase in the number of journal articles and books is very noticeable while the available time to keep up is decreasing Such a large flow of information commonly necessitates professionals to search selectively for material and special publications in one's sub discipline that have more specific coverage In addition to surveying research needs earth scientists working in a pure or applied research environment collect and produce information that often is of interest to the much larger group of industry employed geologists and geophysicists to professionals employed by agencies and to students To accommodate this exchange of needed information Springer Verlag is launching a monograph series entitled *Frontiers in Sedimentary Geology* This series will cover a number of subjects related to sediments and sedimentary rocks in a manner that both the researcher and the industrially oriented earth scientist can use constructively Publications in this monograph series may fit one or more of the following main categories Topical A topical subject will cover either the different aspects of a selected environment of

deposition or present a world tour of a particular depositional environment to demonstrate its variability and its commonalities. The author(s) or editor(s) accepts the responsibility to guide the reader as to the state of knowledge rather than providing a set of independent chapters.
