then rule This means that the programmer of software have to direct every action of the computer programs in response to various inputs There inherently is a limitation of complexity because we human have a limited capacity for managing complex systems Actually many bugs mistakes of programming exist in computer software and it is quite difficult to extinguish them The parts of computer programs where computer viruses attack are also a kind of programming mistakes called security hole Of course human body or nervous system is not perfect No creator or director however exists for us The function of our brain is equipped by learning self organization natural selection and etc resulting in adaptive and flexible information system Brain inspired information technology is aiming to realize such nature made information processing system by using present computer system or specific hardware To do so researchers in various research fields are getting together to inspire each other and challenge cooperatively for the same goal
