Smith,2008 In this technothriller a Japanese detective stumbles onto deployment of military robots With cutting edge technology I Robot is a fast read Future Robots Domenico Parisi,2014-06-15 This book is for both robot builders and scientists who study human behaviour and human societies Scientists do not only collect empirical data but they also formulate theories to explain the data Theories of human behaviour and human societies are traditionally expressed in words but today with the advent of the computer they can also be expressed by constructing computer based artefacts If the artefacts do what human beings do the theory blueprint that has been used to construct the artefacts explains human behaviour and human societies Since human beings are primarily bodies the artefacts must be robots and human robots must progressively reproduce all we know about human beings and their societies And although they are purely scientific tools they can have one very important practical application helping human beings to better understand the many difficult problems they face today and will face in the future and perhaps to find solutions for these problems *Robotics* United States. Congress. House. Committee on Science and Technology. Subcommittee on Investigations and Oversight,1983 Research Objects in their Technological Setting Bernadette Bensaude Vincent,Sacha Loeve,Alfred Nordmann,Astrid Schwarz,2017-02-24 What kind of stuff is the world made of What is the nature or substance of things These are ontological questions and they are usually answered with respect to the objects of science The objects of technoscience tell a different story that concerns the power promise and potential of

things not what they are but what they can be Seventeen scholars from history and philosophy of science epistemology social anthropology cultural studies and ethics each explore a research object in its technological setting ranging from carbon to cardboard from arctic ice cores to nuclear waste from wetlands to GMO seeds from fuel cells to the great Pacific garbage patch Together they offer fascinating stories and novel analytic concepts all the while opening up a space for reflecting on the specific character of technoscientific objects With their promise of sustainable innovation and a technologically transformed future these objects are highly charged with values and design expectations By clarifying their mode of existence we are learning to come to terms more generally with the furniture of the technoscientific world where for example the dead matter of classical physics is becoming the smart material of emerging and converging technologies

Drones and Responsibility Ezio Di Nucci, Filippo Santoni de Sio, 2016-07-01 How does the use of military drones affect the legal political and moral responsibility of different actors involved in their deployment and design This volume offers a fresh contribution to the ethics of drone warfare by providing for the first time a systematic interdisciplinary discussion of different responsibility issues raised by military drones The book discusses four main sets of questions First from a legal point of view we analyse the ways in which the use of drones makes the attribution of criminal responsibility to individuals for war crimes more complicated and what adjustments may be required in international criminal law and in military practices to avoid responsibility gaps in warfare From a moral and political perspective the volume looks at the conditions under which the use of military drones by states is impermissible permissible or even obligatory and what the responsibilities of a state in the use of drones towards both its citizens and potential targets are From a socio technical perspective what kind of new human machine interaction might and should drones bring and which new kinds of shared agency and responsibility Finally we ask how the use of drones changes our conception of agency and responsibility The book will be of interest to scholars and students in military ethics and to those in law politics and the military involved in the design deployment and evaluation of military drones Stabilization, Safety, and Security of Distributed Systems Taisuke Izumi, Petr Kuznetsov, 2018-10-25 This book constitutes the refereed proceedings of the 20th International Symposium on Stabilization Safety and Security of Distributed Systems SSS 2018 held in Tokyo Japan in November 2018 The 24 revised full papers presented were carefully reviewed and selected from 55 submissions The papers are organized into three tracks reflecting major trends related to distributed systems theoretical and practical aspects of stabilizing systems distributed networks and concurrency and safety in malicious environments **Assistive Technology: Shaping a Sustainable and Inclusive World** D.
