The Science of Synthesis Debora Hammond, 2011-05-18 Debora Hammond's *The Science of Synthesis* explores the development of general systems theory and the individuals who gathered together around that idea to form the Society for General Systems Research In examining the life and work of the SGSR's five founding members Ludwig von Bertalanffy Kenneth Boulding Ralph Gerard James Grier Miller and Anatol Rapoport Hammond traces the emergence of systems ideas across a broad range of disciplines in the mid twentieth century Both metaphor and framework the systems concept as articulated by its earliest proponents highlights relationship and interconnectedness among the biological ecological social psychological and technological dimensions of our increasingly complex lives Seeking to transcend the reductionism and mechanism of classical science which they saw as limited by its focus on the discrete component parts of reality the general systems community hoped to complement this analytic approach with a more holistic orientation As one of many systems traditions the general systems group was specifically interested in fostering collaboration and integration among different disciplinary perspectives with an emphasis on nurturing more participatory and truly democratic forms of social organization *The Science of Synthesis* documents a unique episode in the history of modern thought one that remains relevant today This book will be of interest to historians of science system thinkers scholars and practitioners in the social sciences management organization development and related fields as well as the general reader interested in the history of ideas that have shaped critical developments in the second half of the twentieth century

Traditions of Systems Theory Darrell

Arnold, 2013-12-17 The term systems theory is used to characterize a set of disparate yet related approaches to fields as varied as information theory cybernetics biology sociology history literature and philosophy What unites each of these traditions of systems theory is a shared focus on general features of systems and their fundamental importance for diverse areas of life Yet there are considerable differences among these traditions and each tradition has developed its own methodologies journals and forms of analysis This book explores this terrain and provides an overview of and guide to the traditions of systems theory in their considerable variety The book draws attention to the traditions of systems theory in their historical development especially as related to the humanities and social sciences and shows how from these traditions

various contemporary developments have ensued It provides a guide for strains of thought that are key to understanding 20th century intellectual life in many areas The Universal Kabbalah Leonora Leet,2004-09-29 Presents a new understanding of the laws of cosmic manifestation through the sacred geometry of the Sabbath Star diagram Explores three higher levels of consciousness above the four worlds of the classical Kabbalah Reveals the mathematical code of the laws of all cosmic manifestation This landmark work by an innovative modern Kabbalist develops a scientific model for kabbalistic cosmology and soul psychology derived from the kabbalistic diagram of the Tree of Life and the author s own Sabbath Star diagram a configuration of seven Star of David hexagrams This geometric model begins with the four worlds of the classical Kabbalah which bring us to the present time and birthright level of the soul and is then expanded to three higher enclosing worlds or levels of evolving consciousness The Sabbath Star diagram therefore accommodates both the emanationist cosmology of the earlier Zoharic Kabbalah and the future orientation of the later Kabbalah of Isaac Luria The hexagram elements that construct each expansion of the Sabbath Star diagram configure the cosmic stages of each of its worlds The matrix that is produced by these construction elements configures the level of the multi dimensional soul that is correlated with each cosmic world In its final stage this model unites the finite and infinite halves of the Sabbatical world in a way that exemplifies the secret doctrine of the Kabbalah Not only does this work offer a new inclusive model for the Kabbalah but it also provides a basis for complexity theory with its final extrapolation to infinity The universality of this model is further shown by its applicability to such other domains as physics sociology linguistics and human history This universal model encodes the laws of all cosmic manifestation in terms that are particularly coherent with the formulations of the Kabbalah giving a mathematical basis to many aspects of this mystical tradition and providing a new synthesis of science and spirituality for our time that may well write a new chapter to the Kabbalah The Austrian Mind William M.

Models of Man J.J. Dagenais, 2012-12-06 This essay is first a theoretical and historical study of some classical scientific ways of studying human being in the world The more readily accessible and more commonly discussed models of being human were chosen for review here but structuralism is included because I believe it will have the same impact in America as it has had in France and I hope that American readers might be forewarned about what may be ideologically at stake before the technical and fruitful aspects of the movement become an academic fad in the United States The subjects included are mainline experimental psychology from Wundt to Skinner with its relatively shortlived functionalist and Watsonian behaviorist formulations holistic psychology from Brentano through Stumpf Husserl and Goldstein to Maslow Rogers and contemporary third force psychology and the psychoanalytic model for which the only paradigm is Freud himself Preeminence is given to psychological paradigms since their subject matter lies closest to the classical philosophical tradition from which philosophical anthropology emerged This book is in the final analysis a prolegomenon to an articulated philosophical anthropology Sociological models are also considered the classical tradition from Comte to the present and Marxist anthropology from the manuscripts of 1844 to the present The structuralist model from Durkheim to Chomsky is also considered since it cuts across and gives new dimensions to all the foregoing models The essay is second a phenomenological critique of these historico theoretical considerations

Rights for Robots Joshua C. Gellers, 2020-10-26 Bringing a unique perspective to the burgeoning ethical and legal issues surrounding the presence of artificial intelligence in our daily lives the book uses theory and practice on animal rights and the rights of nature to assess the status of robots Through extensive philosophical and legal analyses the book explores how rights can be applied to nonhuman entities This task is completed by developing a framework useful for determining the kinds of personhood for which a nonhuman entity might be eligible and a critical environmental ethic that extends moral and legal consideration to nonhumans The framework and ethic are then applied to two hypothetical situations involving real world technology animal like robot companions and humanoid sex robots Additionally the book approaches the subject from multiple perspectives providing a comparative study of legal cases on animal rights and the rights of nature from around the world and insights from structured interviews with leading experts in the field of robotics Ending with a call to rethink the concept of rights in the Anthropocene suggestions for further research are made An essential read for scholars and students interested in robot animal and environmental law as well as those interested in technology more generally the book is a ground breaking study of an increasingly relevant topic as robots become ubiquitous in modern society The Open Access version of this book available at <http://www.taylorfrancis.com/books/e/ISBN-9781003000000> has been made available under a Creative Commons Attribution Non Commercial No Derivatives 4.0 license

Perceptual Cognitive Development, 1969 **Biophilosophy** Rolf Sattler, 2012-12-06 This book is an introduction to biophilosophy written primarily for the student of biology the practicing biologist and the educated layperson It does not presuppose technical knowledge in biology or philosophy However it

requires a willingness to examine the most basic foundations of biology which are so often taken for granted Furthermore it points to the bottomlessness of these foundations the mystery of life the Unnamable I have tried to further the awareness that biological statements are based on philosophical assumptions which are present in our minds even before we enter the laboratory These assumptions which often harbor strong commitments are exposed throughout the book I have tried to show how they influence concrete biological research as well as our personal existence and society Thus emphasis is placed on the connection between biophilosophy and biological research on the one hand and biophilosophy and the human condition on the other

Mechanisms in World and Mind Bernd Lindemann, 2014-08-19 The topic of the reduction of mental processes to biophysical mechanisms touches at the core of the mind body problem a puzzle in the philosophy of mind since the days of Descartes This book is about philosophical aspects of neuroscience centred on perspective dualism The topic unfolds in the discussion of mechanisms in world and mind Neuronal mechanisms of differing complexity are described in a general way It is shown how models of such mechanisms may be classified and assigned to levels of systems theory Reduction strategies are applied to processes of life mind and consciousness The aim is physicalistic to explore if and how the mental may be understood in terms of biophysics and its mechanisms

The Soft Machine David Porush, 2018-05-15 The Soft Machine originally published in 1985 represents a significant contribution to the study of contemporary literature in the larger cultural and scientific context David Porush shows how the concepts of cybernetics and artificial intelligence that have sparked our present revolution in computer and information technology have also become the source for images and techniques in our most highly sophisticated literature postmodern fiction by Barthelme Barth Pynchon Beckett Burroughs Vonnegut and others With considerable skill Porush traces the growth of the metaphor of the machine as it evolves both technologically and in literature of the twentieth century He describes the birth of cybernetics gives one of the clearest accounts for a lay audience of its major concepts and shows the growth of philosophical resistance to the mechanical model for human intelligence and communication which cybernetics promotes a model that had grown increasingly influential in the previous decade The Soft Machine shows postmodern fiction synthesizing the inviting metaphors and concepts of cybernetics with the ideals of art a synthesis that results in what Porush calls cybernetic fiction alive to the myths and images of a cybernetic age

in a book before Additionally chapters relating to the new approaches in computational modeling of higher order cognitive function and consciousness are included The book is of great value for established as well as young researchers from a wide cross section of interdisciplinary scientific backgrounds aiming to pursue research in this field as well as an informed public Presents the latest developments in the scientific study of consciousness Critically reviews different theoretical and philosophical explanations related to the subject An important book for both students and researchers in designing research projects on consciousness

From Bricks to Brains Michael Robert William Dawson, Brian Dupuis, Michael Wilson, 2010 Discussing the characteristics that distinguish embodied cognitive science from classical cognitive science the authors place a renewed emphasis on sensing and acting on the importance of physical embodiment and on the exploration of distributed notions of control They also show how synthesizing simple systems and observing their behaviour can generate new theoretical insights Numerous examples are brought forward to illustrate a key theme the importance of environment to an actor Even simple agents such as LEGO robots are capable of exhibiting complex behaviour when they can sense and alter the world around them Book Jacket

Fractals of Brain, Fractals of Mind Earl Mac Cormac, Maxim I. Stamenov, 1996-06-28 This collective volume is the first to discuss systematically what are the possibilities to model different aspects of brain and mind functioning with the formal means of fractal geometry and deterministic chaos At stake here is not an approximation to the way of actual performance but the possibility of brain and mind to implement nonlinear dynamic patterns in their functioning The contributions discuss the following topics among others the edge of chaos dynamics in recursively organized neural systems and in intersensory interaction the fractal timing of the neural functioning on different scales of brain networking aspects of fractal neurodynamics and quantum chaos in novel biophysics the fractal maximum power evolution of brain and mind the chaotic dynamics in the development of consciousness etc It is suggested that the margins of our capacity for phenomenal experience are fractal limit phenomena Here the possibilities to prove the plausibility of fractal modeling with appropriate experimentation and rational reconstruction are also discussed A conjecture is made that the brain vs mind differentiation becomes possible most probably only with the imposition of appropriate symmetry groups implementing a flowing interface of features of local vs global brain dynamics Series B

Imagining Slaves and Robots

in Literature, Film, and Popular Culture Gregory Jerome Hampton, 2015-10-22 *Imagining Slaves and Robots in Literature Film and Popular Culture Reinventing Yesterday's Slave with Tomorrow's Robot* is an interdisciplinary study that seeks to investigate and speculate about the relationship between technology and human nature. It is a timely and creative analysis of the ways in which we domesticate technology and the manner in which the history of slavery continues to be utilized in contemporary society. This text interrogates how the domestic slaves of the past are being reimagined as domestic robots of the future. Hampton asserts that the rhetoric used to persuade an entire nation to become dependent on the institution of chattel slavery will be employed to promote the enslavement of technology in the form of humanoid robots with Artificial Intelligence. *Imagining Slaves and Robots in Literature Film and Popular Culture* makes the claim that science fiction film and popular culture have all been used to normalize the notion of robots in domestic spaces and relationships. In examining the similarities of human slaves and mechanical or biomechanical robots, this text seeks to gain a better understanding of how slaves are created and justified in the imaginations of a supposedly civilized nation. And in doing so, give pause to those who would disassociate America's past from its imminent future.

Education from a Whiteheadian Point of View Vesselin Petrov, 2019-03-28 The basic aims of contemporary thinking in education are to cultivate a proper comprehension of the meaning and purpose of education and the role of the teacher and to develop adequate theoretical and methodological frameworks that combine some of the positive sides of the leading theories while avoiding their disadvantages. Toward these ends, one excellent candidate for consideration is Alfred North Whitehead's 1861-1947 process relational philosophy of education as set forth in *The Aims of Education* 1929 and elsewhere. The contributors to this volume analyze Whitehead's philosophy of education in a detailed and critical fashion, including inquiring into the development of cycle-based approaches to education like Whitehead's in intellectual history as well as its potential objective bases. They also demonstrate how this relates to and can be integrated with other leading theories of education and contemporary pedagogical thinking and identify avenues for its positive practical application in schooling across the globe as well as in scientific research. The book further critically evaluates current educational practices and the organization of educational institutions in this light and the effectiveness of teaching strategies that are founded upon some of its principles while also exploring the ramifications of its selection and application in education for society in general as well as for our common civilizational aspirations, including humanity's addressing of global problems such as the ecological crisis. In addition, the volume also serves to lay some of the groundwork for its potential further development.
