Robust Estimation and Failure Detection Rami S. Mangoubi, 2012-12-06 The series Advances in Industrial Control aims to report and encourage technology transfer in control engineering The rapid development of control technology impacts all areas of the control discipline New theory new controllers actuators sensors new industrial processes computer methods new applications new philosophies new challenges Much of this development work resides in industrial reports feasibility study papers and the reports of advanced collaborative projects The series offers an opportunity for researchers to present an extended exposition of such new work in all aspects of industrial control for wider and rapid dissemination This monograph brings together two of the most exciting areas of advanced signal processing and control The first involves the development of optimal estimators for uncertain signal and noise models The second is the subject of failure detection and isolation which has considerable potential in a range of applications The text provides a gradual build up of ideas moving from traditional Wiener and Kalman filtering to risk sensitive control and estimation problems *Automation in Mining, Mineral and Metal Processing 2004* Dominique Sauter, D. Theilliol, 2006-02-21 Approx 482 pages **Robust Control and Linear Parameter Varying Approaches** Olivier Sename, Peter Gaspar, József Bokor, 2013-02-01 Vehicles are complex systems non linear multi variable where the abundance of embedded controllers should ensure better security This book aims at emphasizing the interest and potential of Linear Parameter Varying methods within the framework of vehicle dynamics e g proposed control oriented model complex enough to handle some system non linearities but still simple for control or observer design take into account the adaptability of the vehicle s response to driving situations to the driver request and or to the road solicitations manage interactions between various actuators to optimize the dynamic behavior of vehicles This book results from the 32th International Summer School in Automatic that held in Grenoble France in September 2011 where recent methods based on robust control and LPV technics then applied to the control of vehicle dynamics have been presented After some theoretical background and a view on some recent works on LPV approaches for modelling analysis control observation and diagnosis the main emphasis is put on road vehicles but some illustrations are concerned with railway aerospace and underwater vehicles The main objective of the book is to demonstrate the value of this approach for controlling the dynamic behavior of vehicles It presents in a rm way background and new results on LPV methods and their application to vehicle dynamics

Fault Detection, Supervision and Safety of Technical Processes 2006 Hong-Yue Zhang, 2007-03-01. The safe and reliable operation of technical systems is of great significance for the protection of human life and health, the environment and of the vested economic value. The correct functioning of those systems has a profound impact also on production cost and product quality. The early detection of faults is critical in avoiding performance degradation and damage to the machinery or human life. Accurate diagnosis then helps to make the right decisions on emergency actions and repairs. Fault detection and diagnosis (FDD) has developed into a major area of research at the intersection of systems and control engineering, artificial intelligence, applied mathematics and statistics and such application fields as chemical, electrical, mechanical and aerospace engineering. IFAC has recognized the significance of FDD by launching a triennial symposium series dedicated to the subject. The SAFEPROCESS Symposium is organized every three years since the first symposium held in Baden Baden in 1991. SAFEPROCESS 2006, the 6th IFAC Symposium on Fault Detection, Supervision and Safety of Technical Processes, was held in Beijing, P.R. China. The program included three plenary papers, two semi plenary papers, two industrial talks by internationally recognized experts and 258 regular papers which have been selected out of a total of 387 regular and invited papers submitted. Discusses the developments and future challenges in all aspects of fault diagnosis and fault tolerant control. 8 invited and 36 contributed sessions included with a special session on the demonstration of process monitoring and diagnostic software tools.
