garden If used they are often grown in troughs or low to the ground to avoid obscuring the eponymous rocks The plants found in rock gardens are usually species that flourish in well drained poorly irrigated soil Some rock gardens are designed and built to look like natural outcrops of bedrock Stones are aligned to suggest a bedding plane and plants are often used to conceal the joints between said stones This type of rockery was popular in Victorian times and usually created by professional landscape architects The same approach is sometimes used in commercial or modern campus landscaping but can also be applied in smaller private gardens The Japanese rock garden often referred to as a Zen garden is a special kind of rock garden with water features moss pruned trees and bushes and very few plants Rock gardens have become increasingly popular as landscape features in tropical countries such as Thailand The combination of wet weather and heavy shade trees along with the use of heavy plastic liners to stop unwanted plant growth has made this type of arrangement ideal for both residential and commercial gardens due to its easier maintenance and drainage
