Role Of Apoptosis In Infection:

Role of Apoptosis in Infection Diane E. Griffin, 2005-08-29 will follow **Cell Death During HIV Infection** Andrew D. Badley, 2005-11-29 In an effort to go beyond immune based therapies researchers are now considering the implications of apoptosis dysregulation during HIV induced immunodeficiency This work provides the first comprehensive compendium of the progress made in understanding the process of cell death related to HIV and the potential breakthroughs in treatment that offer much promise Combining the work of more than two dozen top researchers this seminal volume provides clinicians and researchers with an excellent reference while also serving as an incubator to stimulate future research It explains the fundamental biology involved with apoptosis explains its clinical impact in HIV and examines the newest therapeutic approaches *The Mechanisms of Neuronal Damage in Virus Infections of the Nervous System* Georg Gosztonyi, 2013-04-17 It has been recognized that viruses can induce neuronal damage by a variety of mechanisms This volume summarizes for the first time the various ways that neurons can degenerate under the influence of viral infection ranging from acute necrosis and virus induced apoptosis to chronic damage in persistent infections The mechanisms of neuronal latency are dealt with as well The volume also includes chapters that review the chronic damage caused by viral proteins that interfere with differentiated functions of the neuron including signaling by neurotransmitters and signal transduction by trophic factors Other chapters deal with the controversial role of cellular immune reactions which may be helpful in controlling infection but may also be detrimental to the host nervous system The specific mechanisms of damage involved in retroviral infections and in prion diseases of the nervous system are reviewed and finally how autoimmune diseases can lead to neuronal damage

Protective and Pathological Immune Responses in the CNS B. Dietzschold, J.A. Richt, 2013-11-11 In spite of the protection of the CNS there are situations where immune responses occur due to different disease processes While antigen specific cells of the adaptive immune response are not normally functional in the CNS tissue CNS resident cells respond to infection or insult One mechanism is through the induction of apoptosis in virus infected neurons which may be protective or pathogenic depending on the extent of cell death Roles of Non-coding RNAs in Infectious Diseases Guofeng Cheng, Pengfei Cai, Yongsheng Liu, 2022-11-29 *The inflammasome and its role in infections* Amal O. Amer, The Belt and Road of Animal Diseases Shao-Lun Zhai, Feng Li, 2022-01-05 *Moonlighting Cell Stress Proteins in Microbial Infections* Brian Henderson, 2013-07-08 Microbial infection is increasingly seen as a problem as we begin to run out of antibiotics Understanding how microbes cause disease is essential In recent years it has begun to emerge that bacteria fungi protozoa and viruses can use their cell stress proteins to cause infection This volume brings together the world's leading experts in the study of the microbial and human cell stress proteins that are involved in enabling microorganisms to infect humans and cause serious disease **Bacteria-host interactions: from infection to carcinogenesis** Marco Antonio Hernández-Luna, Maurizio Sanguinetti, 2025-07-31 Bacteria host interactions represent a critical area of research particularly

in the context of infection and carcinogenesis Microorganisms such as viruses and bacteria have long been implicated in the development of cancers with notable examples including human papillomavirus HPV in cervical cancer and Helicobacter pylori in gastric cancer Recent studies have expanded this understanding to include a broader range of bacteria both pathogenic and commensal in the carcinogenic process This has sparked significant interest in the role of bacteria in the onset and progression of various neoplasms While much of the research has concentrated on gastrointestinal cancers where dysbiosis and bacterial infections are suspected contributors emerging evidence suggests that bacteria also colonize tumor tissues in organs such as the breast prostate and lung Despite these findings the precise mechanisms by which bacteria influence tumor biology remain poorly understood highlighting the need for further investigation This research topic aims to describe the complex interactions between bacteria and host tissues that contribute to carcinogenesis Specifically it seeks to identify and characterize pathogenic bacteria associated with cancer understand the role of bacterial toxins in carcinogenic activity and explore the impact of dysbiosis in gastrointestinal neoplasms Additionally the research will investigate bacterial colonization in various tumor tissues and the resulting immunological alterations due to bacteria tumor interactions By addressing these questions the research aims to fill critical gaps in our understanding and potentially uncover new avenues for cancer prevention and treatment To gather further insights into the intricate dynamics of bacteria host interactions in carcinogenesis we welcome articles addressing but not limited to the following themes Pathogenic bacteria associated with carcinogenesis Bacterial toxins with carcinogenic activity Dysbiosis in neoplasms of the gastrointestinal tract Bacterial colonization in tumor tissue Immunological alterations due to bacteria tumor tissue interaction

Nucleic Acid Sensors and Antiviral Immunity Dr. Prakash Sambhara, 2012-11-26 The discovery of Toll like receptors TLRs in the late 1990s ushered in a new age of discovery for innate immunity The importance of TLRs for immunology and biomedical research was recognized with the Nobel Prize for Medicine or Physiology in 2011 The prize was shared by three scientists Ralph Steinman for the discovery of dendritic cells

Autophagy in Infection and Immunity Beth Levine, Tamotsu Yoshimori, Vojtech Deretic, 2009-10-03 Autophagy is a fundamental biological process that enables cells to autolyse their own cytosol during starvation and other forms of stress It has a growing spectrum of acknowledged roles in immunity aging development neurodegeneration and cancer biology An immunological role of autophagy was first recognized with the discovery of autophagy's ability to sanitize the cellular interior by killing intracellular microbes Since then the repertoire of autophagy's roles in immunity has been vastly expanded to include a diverse but interconnected portfolio of regulatory and effector functions Autophagy is an effector of Th1 Th2 polarization it fuels MHC II presentation of cytosolic self and microbial antigens it shapes central tolerance it affects B and T cell homeostasis it acts both as an effector and a regulator of Toll like receptor and other innate immunity receptor signaling and it may help ward off chronic inflammatory disease in humans With such a multitude of innate and adaptive immunity functions the study of autophagy in immunity is one of the most

rapidly growing fields of contemporary immunological research This book introduces the reader to the fundamentals of autophagy guides a novice and the well informed reader alike through different immunological aspects of autophagy as well as the countermeasures used by highly adapted pathogens to fight autophagy and provides the expert with the latest up to date information on the specifics of the leading edge of autophagy research in infection and immunity

Chikungunya Virus Chioma M. Okeoma, 2016-12-01 This book describes the molecular biology pathogenesis epidemiology and potential strategies for control of chikungunya virus CHIKV infection It offers insight into the structure and functions of CHIKV proteins as they relate to host response interaction with the arthropod vector and vaccination A detailed account of both the epidemiological outlook and the clinical syndrome of CHIKV infection is provided The complex host virus interaction and the signaling pathways that mediate such interactions are also covered Throughout the book graphics and charts are used to provide stimulating discussion on important findings in the field of chikungunyaology The chapters are written with a global perspective by experts of CHIKV from around the world This project is especially significant given that CHIKV is a pathogen of worldwide public health concern Although the presence of CHIKV infection is not global yet worldwide dissemination is predicted in the future due largely to the lack of effective treatment therapy efficient control of transmission and knowledge about mechanisms of pathogenesis Additionally globalization of CHIKV is predicated on its mode of dissemination mosquito vector and cross border travel and migration
