## **Role Of Central Conceptual Structures In The Development Of C:**

*The Mind's Staircase* Robbie Case, 2013-04-15 The shortcomings of Piaget's theory of intellectual development are well known. Less clear is what sort of theory should be devised to replace it. This volume describes the current main contenders including neo-Piagetian, neo-connectionist, neo-innatist and sociocultural models. Its contributors conclude that none of these models are adequate because each one implies a view of the human mind which is either too general, too particular or too modular. A collaborative program of research seven years in the making is then described which gives support to a newly emerging synthesis of these various positions.

Cognitive Development Sergio Morra, Camilla Gobbo, Zopito Marini, Ronald Sheese, 2012-12-06 Tying together almost four decades of neo-Piagetian research, *Cognitive Development* provides a unique critical analysis and a comparison of concepts across neo-Piagetian theories. Like Piaget, neo-Piagetian theorists take a constructivist approach to cognitive development; are broad in scope and assume that cognitive development is divided into stages with qualitative differences. Unlike Piaget, however, they define the increasing complexity of the stages in accordance with the child's information processing system rather than in terms of logical properties. This volume illustrates these characteristics and evidences the exciting possibilities for neo-Piagetian research to build connections both with other theoretical approaches such as dynamic systems and with other fields such as brain science. The opening chapter provides a historical orientation including a critical distinction between the logical and the dialectical Piaget. In subsequent chapters the major theories and experimental findings are reviewed including Pascual Leone's Theory of Constructive Operators, Halford's structuralist theory, Fischer's dynamic systems approach to skills, Case's theory of Central Conceptual Structures, Siegler's microgenetic approach and the proposals of Mounoud and Karmiloff-Smith as well as the work of others including Demetriou and de Ribaupierre. The interrelation of emotional and cognitive development is discussed extensively as is relevant neo-Piagetian research on information processing. The application of neo-Piagetian research to a variety of topics including children's problem solving, psychometrics and education is highlighted. The book concludes with the authors' views on possibilities for an integrated neo-Piagetian approach to cognitive development.

**Exceptionality in East Asia** Shane N. Phillipson, Heidrun Stoeger, Albert Ziegler, 2013-01-04 The continual successes of students from East Asia are confirmed in a variety of international tests of academic achievement and yet despite this attainment many scholars have realised that a substantial proportion of these students are also underachieving. Using the actiotope model of giftedness to integrate a broad range of research, this innovative book features a number of chapters written by internationally recognised scholars in a frank and lively discussion about the origins of exceptionality in students from East Asia. With the actiotope model as the theoretical framework, the book distinguishes between trait models of giftedness and systems approaches to exceptionality. Breaking new ground in understanding the complex interactions between a learner's environment, goals, intelligence and motivations in the development of their ever-expanding knowledge and skill set, this book will describe with examples a

systems approach to the development of exceptionality allowing educators and researchers the ability to track students with greater precision influence the means by which educators identify and support students with the potential for exceptional performance suggest possible reasons for the variability in the achievement of potentially gifted students provide strategies to support these students have a profound effect on the way that exceptionality and giftedness are defined and understood not only in East Asia but also in the West Covering issues that have firm theoretical foundations and which are based on cutting edge ideas Exceptionality in East Asia has significant implications for gifted education and is essential reading for scholars undergraduate and postgraduate students interested in the psychological and social basis of exceptionality

Teaching for Transfer Anne McKeough, Judy Lee Lupart, Anthony Marini, 2013-12-16 The transfer of learning is universally accepted as the ultimate aim of teaching Facilitating knowledge transfer has perplexed educators and psychologists over time and across theoretical frameworks it remains a central issue for today's practitioners and theorists This volume examines the reasons for past failures and offers a reconceptualization of the notion of knowledge transfer its problems and limitations as well as its possibilities Leading scholars outline programs of instruction that have effectively produced transfer at a variety of levels from kindergarten to university They also explore a broad range of issues related to learning transfer including conceptual development domain specific knowledge learning strategies communities of learners and disposition The work of these contributors epitomizes theory practice integration and enables the reader to review the reciprocal relation between the two that is so essential to good theorizing and effective teaching
