NMR Spectroscopy in Food Analysis Apostolos Spyros, Photis Dais, 2015-10-20 During the last two decades the use of NMR spectroscopy for the characterization and analysis of food materials has flourished and this trend continues to increase today Currently there exists no book that fulfils specifically the needs of food scientists that are interested in adding or expanding the use of NMR spectroscopy in their arsenal of food analysis techniques Current books and monographs are rather addressed to experienced researchers in food analysis providing new information in the field This book written by acknowledged experts in the field fills the gap by offering a day to day NMR guide for the food scientist affording not only the basic theoretical aspects of NMR spectroscopy but also practical information on sample preparation experimental conditions and data analysis Current developments in the field covered in this book are the availability of solid state NMR experiments such as CP MAS and more importantly HR MAS NMR for the analysis of semisolid foods and the increasing use of chemometrics to analyze NMR data in food metabonomics Moreover this book contains an up to date discussion of MRI in food analysis including topics such as food processing and natural changes in food such as ripening The book is a compact

and complete source of information for food scientists who wish to apply methodologies based on NMR spectroscopy in food analysis. It contains information so far scattered in the primary literature in NMR treatises and food analysis books in a concise format that makes it appealing to food scientists who have no or minimal experience in magnetic resonance techniques. The inclusion of practical information about NMR instrumentation, experiment setup, acquisition and spectral analysis for the study of different food categories make this book a hands on manual for food scientists wishing to implement novel NMR spectroscopy based analytical techniques in their field.

Analysis of Naturally Occurring Food Toxins of Plant Origin, Leo M.L. Nollet, Javed Ahmad, 2022-12-02. Natural toxins are toxic compounds that are naturally produced by living organisms. These toxins are not harmful to the organisms themselves but they may be toxic to other creatures, including humans, when eaten. These chemical compounds have diverse structures and differ in biological function and toxicity. Some toxins are produced by plants as a natural defense mechanism against predators, insects or microorganisms, or as a consequence of infestation with microorganisms, such as mold, in response to climate stress, such as drought or extreme humidity. Well known groups of natural toxins of plant origin are cyanogenic glycosides, pyrrolizidine alkaloids, furocoumarins, lectins and glycoalkaloids. These plant origin natural toxins can cause a variety of adverse health effects and pose a serious health threat to both humans and livestock. *Analysis of Naturally Occurring Food Toxins of Plant Origin* is divided into three sections that provide a detailed overview of different classes of food toxins that are naturally found in plants, including various analytical techniques used for their structural characterization, identification, detection and quantification. This book

provides in depth information and comprehensive discussion over quantitative and qualitative analysis of natural toxins in plant based foods Key Features Provides a detailed overview of different classes of natural toxins found in plants Explains how IR NMR and mass spectrometry are utilized in characterization and identification Describes applicability of HPLC LC MS GC MS and HPTLC techniques for detection and quantification Discusses progress in the field related to capillary electrophoresis ELISA and biosensors for quantitative application of these techniques Also available in the Food Analysis and Properties Series Nutriomics Well being through Nutrition edited by Devarajan Thangadurai Saher Islam Leo M L Nollet Juliana Bunmi Adetunji ISBN 9780367695415 Bioactive Peptides from Food Sources Analysis and Functions edited by Leo M L Nollet and Semih tle ISBN 9780367608538 Mass Spectrometry in Food Analysis edited by Leo M L Nollet and Robert Winkler ISBN 9780367548797 For a complete list of books in this series please visit our website at www.crcpress.com Food Analysis Properties book series CRCFOODANPRO Medical Toxicology of Natural Substances Donald G.
