Motherhood By Choice Pioneers In Womens Health And Family Planning:

Motherhood by Choice Perdita Huston, 1992 To honor the 40th anniversary of the International Planned Parenthood Federation journalist Perdita Huston travelled the world to gather this remarkable collection of oral histories of and about the often unknown leaders of a worldwide movement to bring women their reproductive rights Drawing on personal interviews Huston delineates the motivations strategies and heartaches of twelve pioneers eight women four men both from the developing world before and after colonial rule and from industrialized countries who braved scorn and abuse to raise the issues of family planning contraception and sex education and to fight for improved healthcare for women These moving testimonies reflect the personal leadership style of each pioneer from Dr Evangelina Rodriguez the first woman doctor in the Dominican Republic who defied church policies and the corrupt dictator Trujillo to promote family planning and fight the spread of venereal disease to Miyoski Ohba who contended with innumerable taboos in postwar Japan to introduce poor villagers to the use of condoms to Elsie Ottsen Jensen born in 1886 to a poor Norwegian family of 17 children who became acutely aware of the high rate of maternal mortality throughout turn of the century Scandinavia and went on to found the Swedish Association of Sex Educators in 1933 *Motherhood by Choice* stands as a significant historical document tracing the development of public health services sex education and contraceptive services that will inspire and inform all who are concerned about women's health and reproductive rights

The Oxford Handbook of the History of Eugenics Alison Bashford, Philippa Levine, 2010-09-24 Eugenic thought and practice swept the world from the late nineteenth to the mid twentieth century in a remarkable transnational phenomenon Eugenics informed social and scientific policy across the political spectrum from liberal welfare measures in emerging social democratic states to feminist ambitions for birth control from public health campaigns to totalitarian dreams of the perfectibility of man This book dispels for uninitiated readers the automatic and apparently exclusive link between eugenics and the Holocaust It is the first world history of eugenics and an indispensable core text for both teaching and research Eugenics has accumulated generations of interest as experts attempted to connect biology human capacity and policy In the past and the present eugenics speaks to questions of race class gender and sex evolution governance nationalism disability and the social implications of science In the current climate in which the human genome project stem cell research and new reproductive technologies have proven so controversial the history of eugenics has much to teach us about the relationship between scientific research technology and human ethical decision making

Development and Women's Reproductive Health in Ghana, 1920-1982 Holly Ashford, 2022-12-09 This book investigates the history of women's reproductive health in Ghana arguing that between the 1920s and 1980s it was largely driven by discourses of development and population control rather than a concern for women's health or rights Between the 1920s and 1980s the choices that Ghanaian women made regarding their reproductive health were defined by development policy and practice Spanning the colonial and immediate postcolonial periods this book demonstrates that

whilst the substance of development discourse shifted over time principles of development continued to be used to impact and legitimise reproductive health policy and practices well after independence The book explores Ghana's pluralist health system the introduction of maternal and child welfare the dominance of the Red Cross in Ghana's maternal and child health landscape nationalist pronatalism and global population activism In order to understand how global iterations of development and health policy impacted ordinary lives in Ghana the author uses evidence from multiple levels including private papers national archives and records of international and transnational organisations Providing balanced archival perspectives the book includes extensive oral history interviews carried out with both rural Ghanaian women and traditional birth attendants as well as with midwives doctors and family planning fieldworkers This book will have an important impact on a number of historical fields including Ghanaian history global health history global histories of population and family planning and histories of development It will be of interest to researchers and students in the history of public health development Africa Ghana and gender

Cesarean Section Jacqueline H. Wolf, 2018-05-15 Why have cesarean sections become so commonplace in the United States Between 1965 and 1987 the cesarean section rate in the United States rose precipitously from 4.5 percent to 25 percent of births By 2009 one in three births was by cesarean a far higher number than the 5-10% rate that the World Health Organization suggests is optimal While physicians largely avoided cesareans through the mid twentieth century by the early twenty first century cesarean section was the most commonly performed surgery in the country Although the procedure can be lifesaving how and why did it become so ubiquitous Cesarean Section is the first book to chronicle this history In exploring the creation of the complex social cultural economic and medical factors leading to the surgery's increase Jacqueline H Wolf describes obstetricians reliance on assorted medical technologies that weakened the skills they had traditionally employed to foster vaginal birth She also reflects on an unsettling malpractice climate prompted in part by a raft of dubious diagnoses that helped to legitimize defensive medicine and a health care system that ensured cesarean birth would be more lucrative than vaginal birth In exaggerating the risks of vaginal birth doctors and patients alike came to view cesareans as normal and increasingly as essential Sweeping change in women's lives beginning in the 1970s cemented this markedly different approach to childbirth Wolf examines the public health effects of a high cesarean rate and explains how the language of reproductive choice has been used to discourage debate about cesareans and the risks associated with the surgery Drawing on data from nineteenth and early twentieth century obstetric logs to better represent the experience of cesarean surgery for women of all classes and races as well as interviews with obstetricians who have performed cesareans and women who have given birth by cesarean Cesarean Section is the definitive history of the use of this surgical procedure and its effects on women's and children's health in the United States
