The Mountain World, 1964/65 Malcolm Barnes, 1966 **Yuraq Janka: A Guide to the Peruvian Andes** John F. Ricker, 1977 *Frozen in Time* Jeffrey D Stilwell, John A Long, 2011-10-12 No other continent on Earth has undergone such radical environmental changes as Antarctica In its transition from rich biodiversity to the barren cold land of blizzards we see today Antarctica provides a dramatic case study of how subtle changes in continental positioning can affect living communities and how rapidly catastrophic changes can come about Antarctica has gone from paradise to polar ice in just a few million years a geological blink of an eye when we consider the real age of Earth *Frozen in Time* presents a comprehensive overview of the fossil record of Antarctica framed within its changing environmental settings providing a window into a past time and environment on the continent It reconstructs Antarctica's evolving animal and plant communities as accurately as the fossil record permits The story of how fossils were first discovered in Antarctica is a triumph of human endeavour It continues today with modern expeditions going out to remote sites every year to fill in more of the missing parts of the continent's great jigsaw of life Mountains James Fargo Balliett, 2016-07-01 Always awe inspiring mountainous areas contain hundreds of millions of years of history stretching back to the earliest continental landforms This book shows how mountains are characterized by their distinctive geological ecological and biological conditions Often they are so large that they create their own weather patterns They also store nearly one third of the world's freshwater in the form of ice and snow on their slopes Despite their daunting size and often formidable climates mountains are affected by growing local populations as well as distant influences such as air pollution and global climate change Three detailed case studies are presented The first shows how global warming in East Africa is harming Mount Kenya's regional population which relies on mountain runoff to irrigate farms for subsistence crops The second examines the fragile ecology of the South Island Mountain in New Zealand's Southern Alps and how development threatens the region's endemic plant and animal species The third discusses the impact of mountain use over time in New Hampshire's White Mountains where management efforts have been used to limit the growing footprint of millions of annual visitors and alpine trekkers Climate Change, Glacier Response, and Vegetation Dynamics in the Himalaya RB Singh, Udo Schickhoff, Suraj Mal, 2016-06-06 This book provides information essential for anyone interested in climate and environmental change of the Himalayan region including land and resource managers environmental planners conservationists environmentalists geographers climatologists ecologists and students The book is unique in its coverage of the current understanding of the science of climate change in the Himalayan mountain system and of the major impacts on physical systems and ecosystems The book gives an overview of the physical science basis of climate change and explains drivers and processes of glacier and vegetation dynamics The book covers relevant aspects of accelerated climate change observed in the Himalayan mountain system and highlights the regional differentiation of climatic changes and associated environmental modifications The focus

is on climate variability and change and how physical systems and ecosystems respond to climate change impacts. Consequences include impacts on physical systems such as glacier shrinkage, glacial lake outburst floods, altered hydrological characteristics, permafrost warming and thawing, and mass movements on slopes. Climate change is also a powerful stressor on ecosystems and induces range shifts of plant and animal species and alterations in terms of phenology, biomass, plant cover, plant group dominance, and species composition. Thus, ecosystem structure and functioning will be strongly affected. The book has an introductory chapter followed by a section on climate change, a section on impacts on glaciers and hydrology, and a section on vegetation dynamics. Each section has several chapters presenting key concepts, major drivers, and key processes of environmental change in the Himalayan region from different perspectives. Climate change impacts in the Himalaya have not been studied in much detail, and respective findings were not presented so far in a comprehensive overview. This book summarizes the current knowledge of interactions between climate change and the dynamics of glaciers, hydrology, and vegetation. Genesis, Structure, and Meaning in Gary Snyder's Mountains and Rivers Without End Anthony Hunt, 2016-12-20. When Gary Snyder's long poem *Mountains and Rivers Without End* was published in 1996, it was hailed as a masterpiece of American poetry. Anthony Hunt offers a detailed historical and explicative analysis of this complex work using among his many sources Snyder's personal papers, letters, and interviews. Hunt traces the work's origins as well as some of the sources of its themes and structure, including N drama, East Asian landscape painting, the rhythms of storytelling, chant, and song, Jungian archetypal psychology, world mythology, Buddhist philosophy, and ritual. Native American traditions and planetary geology, hydrology, and ecology. His analysis addresses the poem not merely by its content but through the structure of individual lines and the arrangement of the parts, examining the personal and cultural influences on Snyder's work. Hunt's benchmark study will be rewarding reading for anyone who enjoys the contemplation of Snyder's artistry and ideas and more generally for those who are intrigued by the cultural and intellectual workings of artistic composition. *Joseph E. Yoakum* Mark Pascale, Esther Adler (Curator), Édouard Kopp, 2021-01-01. The extraordinary life of a captivating American artist, beautifully illustrated with his dreamlike drawings. Much of Joseph Elmer Yoakum's story comes from the artist himself and is almost too fantastic to believe. At a young age, Yoakum (1891-1972) traveled the globe with numerous circuses; he later served in a segregated noncombat regiment during World War I before settling in Chicago. There, inspired by a dream, he began his artistic career at age seventy-one, producing some two thousand drawings over a decade. How did Yoakum gain representation in major museum collections in Chicago and New York? What fueled his process, which he described as a spiritual unfoldment? This volume delves into the friendships Yoakum forged with the Chicago Imagists that secured his place in art history, explores the religious outlook that may have helped him cope with a racially fractured city, and examines his

complicated relationship to African American and Native American identities With hundreds of beautiful color reproductions of his dreamlike drawings it offers the most comprehensive study of the artist s work illuminating his vivid and imaginative creativity and giving definition and dimension to his remarkable biography **Antarctic Journal of the United States** ,1982 **U.S. Geological Survey Professional Paper** ,1967 Dictionary of Alaska Place Names Donald J. Orth,1967 Each entry conforms to principles of U S Board on Geographic Names and lists location brief history and meaning of name **Geological Survey Professional Paper** Geological Survey (U.S.),1967 *Arctic Bibliography* Arctic Institute of North America,1969 *The World's Best National Parks in 500 Walks* Mary Caperton Morton,2022-02-22 Tour the world s national parks via five hundred walks and hikes through preserved natural beauty **The Publishers' Trade List Annual** ,1917 *Scientific and Technical Aerospace Reports* ,1969 Mountain Geography Martin F. Price,Alton C. Byers,Donald A. Friend,Thomas Kohler,Larry W.
