Neuropsychology Kenneth Hugdahl,2012-12-06 Clinical neuropsychology typically employs large standardized test batteries to cover the cognitive deficits caused by brain lesions and neurodegenerative diseases The neuropsychologist moves between three levels of explanation the behavioral level the cognitive level and the brain level The behavioral level is measured as actual performance on a test i e the obtained test score The cognitive level refers to the underlying cognitive processes that are reflected in the test scores The brain level finally refers to the neural underpinnings and substrates to the cognitive processes The recent decades have witnessed a dramatic increase in our knowledge about cognitive processes and the underlying neural substrates Experimental techniques and paradigms have played an important role in the accumulation of new knowledge in this field Thus there is a need to present a collection of experimental paradigms and techniques to neuropsychology Some of these paradigms and techniques have however a long history in neuropsychology like dichotic

listening and EEG measures while others are new and novel to most neuropsychologists like animal model paradigms and brain imaging and brain stimulation Experimental techniques typically aim at discovery of causal relationships and with a focus on search for mechanisms In the first chapter Merrill Hiscock presents an overview of experimental techniques and its adaptation in clinical neuropsychology with a focus on behavioral techniques and methods

Perspectives in Psychological Experimentation Viktor Sarris, Allen Parducci, 2024-03-08 One response to questions about the future of psychology is to attempt an answer to another question What have we learned from psychology's past Originally published in 1984 reissued here with a new preface this book presents a collection of original

papers by authorities with international reputations in various fields of psychology at the time Contributors were invited to appraise the past of their own research specialties with an eye toward the future The emphasis is upon the more scientific areas of psychological research The catalyst for this book was an international conference honoring Gustav A Lienert held in 1981 Psychologists from both Western and Eastern Europe North and South America and representing fields as different as psychophysics is from clinical psychology or animal memory from human decision making described their research and argued the prospects for the future of experimental psychology Most of the arguments found their way into this book where readers could confront the different viewpoints at the time and those reading it today can see how accurate their predictions were for the future
