Radar Scattering From Modulated Wind Waves:

Radar Scattering from Modulated Wind Waves G.J. Komen, W.A. Oost, 2012-12-06 Ten years ago de Loor and co workers at TNO The Netherlands were the first to report bottom topography patterns in real aperture radar RAR images of the southern North Sea At that time this was a real puzzle The skin depth of microwaves for sea water is only of the order of centimeters while the sea bottom is about 20 meters below the surface Electromagnetic radiation therefore cannot probe the bottom directly Similar phenomena were found in radar imagery from SEASAT and SIR ALB synthetic aperture radars SAR s of Nantucket Shoals the English Channel and many other coastal areas Since then theory and ocean field experiments Le Phelps Bank Georgia Straits SARSEX TOWARD FASINEX etc have advanced our understanding considerably We now know that these surface signatures are the results of surface currents perturbed by the bottom topography which refract the propagation and modulate the energy of short surface waves so as to cause microwave backscatter power variations Hence any large scale ocean features containing nonuniform surface currents i e internal waves eddies fronts etc will cause similar manifestations in the radar imagery by means of current wave microwave interactions Observations confirm this

From Decoding Turbulence to Unveiling the Fingerprint of Climate Change Hans von Storch, 2022-06-01 This open access book serves as a reference for the key elements and their significance of Klaus Hasselmann s work on climate science and on ocean wave research all based on a rigorous and deeply physical thinking It summarizes the original articles mostly from the 1970 and 1980s some of which are hard to find nowadays and brings them in a present day context From 1975 until 2000 he was founding Director of the Max Planck Institute of Meteorology which he made to one of the world leading academic institutions He first made the issue of anthropogenic climate change accessible to analysis and prediction and later transformed climate science into a significant factor in forming public policy The book is written by co workers and colleagues of Klaus Hasselmann who many under his immediate supervision joined him in this effort With this background they present the key achievements and assess the significance of these for the present state of knowledge and scientific practice

Measuring Ocean Currents Antony Joseph, 2013-08-12 Measuring Ocean Currents Tools Technologies and Data covers all major aspects of ocean current measurements in view of the implications of ocean currents on changing climate increasing pollution levels and offshore engineering activities Although more than 70% of the Earth is covered by ocean there is limited information on the countless fine to large scale water motions taking place within them This book fills that information gap as the first work that summarizes the state of the art methods and instruments used for surface subsurface and abyssal ocean current measurements Readers of this book will find a wealth of information on Lagrangian measurements horizontal mapping imaging Eulerian measurements and vertical profiling techniques In addition the book

describes modern technologies for remote measurement of ocean currents and their signatures including HF Doppler radar systems satellite borne sensors ocean acoustic tomography and more Crucial aspects of ocean currents are described in detail as well including dispersion of effluents discharged into the sea and transport of beneficial materials as well as environmentally hazardous materials from one region to another The book highlights several important practical applications showing how measurements relate to climate change and pollution levels how they affect coastal and offshore engineering activities and how they can aid in tsunami detection Coverage of measurement mapping and profiling techniques

Descriptions of technologies for remote measurement of ocean currents and their signatures Reviews crucial aspects of ocean currents including special emphasis on the planet spanning thermohaline circulation known as the ocean s conveyor belt and its crucial role in climate change Scientific and Technical Aerospace Reports ,1994 Lists citations with abstracts for aerospace related reports obtained from world wide sources and announces documents that have recently been entered into the NASA Scientific and Technical Information Database Air-water Mass Transfer Steven C. Rodriguez,2013 Containing papers presented at the Third International Conference on Physical Coastal Processes Management and Engineering this book examines coastal zone dynamics which involve complex interactions between the atmosphere ocean and land Management of coastal zones is dependent on a number of factors Large temporal and spatial differences in air sea exchange processes and wind strength and direction result from the complex interactions referred to above Recreational and tourism activities make demands on coastal areas With the number and frequency of extreme events due increases with climate change their role in changing coastal zones also needs to be considered The book considers also of these and covers such topics as Wave modelling Hydrodynamic modelling Effects of climate change in coastal zones Coastal defences Energy recovery Sediment transport and erosion Pollution and water quality Planning and beach design Coastal morphology Coastal processes and navigation Coastal processes and GIS Bio physical coastal processes Remote sensing Systems approach Coastal zone management Impact and recovery from tsunamis Impact of storms and extreme events Ecosystems modelling Coastal lagoons Coastal oceanography Socio environmental issues Measuring the Oceans from Space Ian S.
