**Physics and Technology of Nuclear Materials** Ioan Ursu, 2015-08-03 Physics and Technology of Nuclear Materials presents basic information regarding the structure properties processing methods and response to irradiation of the key materials that fission and fusion nuclear reactors have to rely upon Organized into 12 chapters this book begins with selectively several fundamentals of nuclear physics Subsequent chapters focus on the nuclear materials science nuclear fuel structural materials moderator materials employed to slow down fission neutrons and neutron highly absorbent materials that serve in reactor s power control Other chapters explore the cooling agents fluids carrying the energy to its final stage of conversion into electric power thermal and biological shielding materials some outstanding reactor components and irradiated fuel reprocessing The last two chapters deal with nuclear material quality inspection by destructive and non destructive methods and specific materials envisaged for use in future thermonuclear reactors This monograph will be helpful for a wide range of specialists wishing to gear their research and development education and other activities toward the field of nuclear power and nuclear technology Point Defects in Solids James H. Crawford, Lawrence M.

Slifkin, 2012-12-06 Volume 1 of Point Defects in Solids has as its major emphasis defects in ionic solids Volume 2 now extends this emphasis to semiconductors The first four chapters treat in some detail the creation kinetic behavior inter actions and physical properties of both simple and composite defects in a variety of semiconducting systems Also included as in Vol 1 are chapters on special topics namely phonon defect interactions and defects in organic crystals Defect behavior in semiconductors has been a subject of considerable interest since the discovery some twenty five years ago that fast neutron irradiation profoundly affected the electrical characteristics of germanium and silicon Present day interest has been stimulated by such semiconductor applications as solar cell power plants for space stations and satellites and semiconductor particle and y ray detectors since in both radiation damage can cause serious deterioration Of even greater practical concern is the need to understand particle damage in order to capitalize upon the develop ing technique of ion implantation as a means of device fabrication Although the periodic international conferences on radiation effects in semiconductors have served the valuable function of summarizing the extensive work being done in this field these proceedings are much too detailed and lack the background discussion needed to make them useful to the novice **Publications, Reports, and**

Written by experts in their specialist fields the series creates a unique service for the active research chemist supplying regular critical in depth accounts of progress in particular areas of chemistry. For over 90 years The Royal Society of Chemistry and its predecessor the Chemical Society have been publishing reports charting developments in chemistry which originally took the form of Annual Reports. However by 1967 the whole spectrum of chemistry could no longer be contained within one volume and the series Specialist Periodical Reports was born. The Annual Reports themselves still existed but were divided into two and subsequently three volumes covering Inorganic Organic and Physical Chemistry. For more general coverage of the highlights in chemistry they remain a must. Since that time the SPR series has altered according to the fluctuating degree of activity in various fields of chemistry. Some titles have remained unchanged while others have altered their emphasis along with their titles some have been combined under a new name whereas others have had to be discontinued. The current list of Specialist Periodical Reports can be seen on the inside flap of this volume      *Ion Implantation* R. Morgan, K. R.
