Radiation Protection and Measurement for Low-voltage Neutron Generators National Council on Radiation Protection and Measurements,1983 *Radiation Protection and Measurement for Low-voltage Neutron Generators* National Council on Radiation Protection and Measurements,1983 The Physics and Radiobiology of Fast Neutron Beams David K. Bewley,1989-10-01 Over fifty years have passed since the first patient was treated with fast neutrons but this form of therapy is still a matter of bitter dispute Neutron generators have been installed in many countries and now patients can be treated with equipment that is technically similar to modern megavoltage x ray equipment The Physics and Radiobiology of Fast Neutron Beams presents a full discussion of the physical and radiobiological factors governing the production and use of fast neutron beams for therapy The book discusses vastly improved neutron generators advances in the standardization of dosimetric methods and the specification of radiation quality In addition it explores nuclear methods of analysis particularly neutron activation analysis in vivo Influencing the place of radiotherapy with neutrons and other heavy particles the radiobiological factors governing the treatment of cancer with radiation are examined The author also studies the radiation hazard of neutrons a matter of importance in the use of neutrons for chemical analysis in vivo The Physics and Radiobiology of Fast Neutron Beams will be a valuable introduction to the subject for radiotherapists medical physicists radiographers and radiobiologists new to the field The book is also a useful summary of current knowledge for those already established in the use of fast neutrons for medical purposes **Nuclear Safety** ,1968 **Energy Research Abstracts** ,1987 **Radiation Protection for Particle Accelerator Facilities** National Council on Radiation Protection and Measurements,2003 The purpose of this Report is to provide design guidelines for radiation protection and to identify those aspects of radiological safety that are of major or even unique importance to the operation of particle accelerator installations and to suggest methods by which safe operation may be achieved The report is written from an engineering physics viewpoint and is intended to be useful to those engaged in the design and operation of accelerators particularly in smaller institutions and organizations that do not have a large radiological protection staff National Center for Radiological Health Research Projects Supported by Grant Funds ,1968 *Nuclear Science Abstracts* ,1976-06 SI Units in Radiation Protection and Measurements National Council on Radiation Protection and Measurements,1985 **Ionizing Radiation Exposure of the Population of the United States** National Council on Radiation Protection and Measurements,1987 *Introduction to Health Physics, Fifth Edition* Thomas E. Johnson,2017-05-22 Understand every important aspect of health physics with this complete overview of the field If it s an important topic in the field of health physics you will find expert well written discussion of it in this trusted text Introduction to Health Physics Fifth Edition spans the entire scope of the field and offers an effective problem solving approach that once mastered will serve you throughout your career Logically divided into fourteen sections beginning with a review of physical principles coverage includes radiation sources radiation dosimetry

radiation safety guidelines evaluation of safety measures and more The Fifth Edition has been updated to reflect the many changes in the practice of ionizing and nonionizing radiation safety in calculation methodology and in the methods for demonstrating compliance with the safety standards that have occurred since publication of the previous edition Learning and teaching aids include more than 470 Homework Problems and 175 Example Problems The text concludes with seven valuable appendices including Values of Some Useful Constants Table of the Elements and The Reference Person Overall Specifications There truly is no better way to master the essentials of the dynamic field of health physics than Introduction to Health Physics Fifth Edition

Radiation Safety in the Use of Nuclear Gauges IAEA,2020-12-23 There are several hundred thousand nuclear gauges incorporating a radioactive source or a radiation generator in use all over the world They have been used in a wide range of industries to improve the quality of products optimize processes and save energy and materials The economic benefits have been amply demonstrated and there is clear evidence that nuclear gauge technology can be used safely and will continue to play an important role Although generic guidance for source handling is available there have been no targeted recommendations for radiation safety in the use of nuclear gauges To fill this gap the current publication provides practical guidance for implementing the safety requirements specified in IAEA Safety Standards Series No GSR Part 3 Radiation Protection and Safety of Radiation Sources International Basic Safety Standards related to the use of nuclear gauges

Radiation Alarms and Access Control Systems National Council on Radiation Protection and Measurements,1986 This report addresses factors that influence production of an image which contains the necessary information to enable the imaging physician to report the diagnostic findings to the referring physician The report treats such matters as the establishment of a quality control program procedures objectives and policies photographic quality control quality control in conventional radiography fluoroscopic and cine imaging and mobile radiographic capacitor discharge and fluoroscopic systems Also treated are x ray tomography mammography dental radiography and radiological special procedures Computed tomography digital imaging nuclear medicine ultrasound and magnetic resonance imaging are also addressed Information is provided on quality control elements of video systems and computers Knovel s description

Protection in Nuclear Medicine and Ultrasound Diagnostic Procedures in Children National Council on Radiation Protection and Measurements,1983 The use of nuclear medicine and ultrasound in pediatric patients has undergone rapid growth in recent years As in other branches of the radiological sciences nuclear medicine practice should minimize radiation dose and consequently possible biological damage provided that necessary information desired from the procedure is not diminished As no significant biological effects from ultrasound diagnostic studies in pediatric patients have been reported the implications of use must be treated in a more theoretical context This Report considers the special problems of radiation protection and the biological effects of radiation associated with pediatric nuclear medicine and the biological implications from studies using ultrasound in pediatric patients Pediatric patients are affected by different diseases from adults and

respond in a different manner to illness Similarly the implications of any imposed biological burden are different from those in adult patients NCRP Report No 68 has considered the biological effects of conventional radiographic studies in pediatric patients NCRP 1981 Nuclear medicine and ultrasound equipment will be considered in general terms with special emphasis on specific application to the pediatric patient The report includes a section devoted to the estimation of radiation dose from a selected group of commonly used radionuclides as derived from several pediatric phantoms This Report also presents an appendix with an extensive tabulation of mean doses per cumulative activity S values Radiography ,1984 **Radiation Protection Design Guidelines for 0.1-100 MeV Particle Accelerator Facilities** National Council on Radiation Protection and Measurements,1977 This report of the National Council on Radiation Protection and Measurements NCRP is concerned with radiations produced by accelerators of charged particles having energies from 9 1 to 100 MeV The material in this report includes recommendations concerning structural shielding and details of accelerator facility design as they pertain to radiation protection The scientific committee responsible for the preparation of this report was charged with preparing a guide to good practice in radiation protection for all types of particle accelerators taking into full consideration their broad application in research medicine and industry In carrying out this objective the committee has endeavored to organize into a single report the recommendations and guidelines for the many accelerator designs performance ratings and applications without resorting to over generalization or undue conservatism There is some overlap of this report with the coverage of other NCRP reports but an attempt has been made to limit duplication of material except where it is justified for the sake of continuity or because of the need to complement the coverage of the following existing NCRP reports or to update their information and recommendations NCRP Report Nos 14 1954a 31 1964b 34 1970a which was superseded by NCRP Report No 49 1976 38 1971a From the Preface page iii *Radiological Assessment* National Council on Radiation Protection and Measurements,1984 *Neptunium* National Council on Radiation Protection and Measurements,1988 *INIS Atomindex* ,1987 Use of Bioassay Procedures for Assessment of Internal Radionuclide Deposition National Council on Radiation Protection and Measurements,1987
