work. Such for instance are personnel in institutional shipping and receiving rooms and those engaged in hospital maintenance work. Many of these people are concerned about radiation hazards and often suffer misconceptions regarding the subject. They sometimes work without instruction or guidance. Sometimes they seek out someone to ask questions about radiation and do not receive from them careful answers to their questions. Too often however they are simply told that everything is all right and that they have no cause to worry. One purpose of this report is to note the types of problems encountered and try to give approaches to handling them. The Radiation Protection Supervisor is usually aware of potential hazards within an institution but sometimes the problems are not evident even to him. From Preface pages iii iv

Radiation Protection in Veterinary Medicine National Council on Radiation Protection and Measurements, 1970. This report is concerned with both the design and operational aspects of veterinary radiation equipment and matters relating to structural shielding design. While much of this material is already contained in Reports 33 and 34 this report presents the pertinent information which is applicable to the veterinary use of radiation. The NCRP believes that it is important for each radiation user in veterinary practice to be thoroughly familiar with the pertinent recommendations. If these remained embedded in the more comprehensive recommendations covering the whole radiation field the availability of the information and the usefulness to the veterinarian would be somewhat limited. This report is intended to serve as a guide to good practice. It provides basic standards which may be used in the preparation of regulatory protection codes but is not specifically written for literal adoption as legal regulations. From Preface pages iii iv

Applying Radiation Safety Standards in Diagnostic Radiology and Interventional Procedures Using X Rays International Atomic Energy Agency, 2006. The International Basic Safety Standards for Protection against Ionizing Radiation and for the Safety of Radiation Sources BSS establish requirements on the legal persons responsible for designing running and decommissioning practices involving ionizing radiation. This report is intended to be of assistance to both regulators and users of radiation sources in diagnostic radiology and interventional procedures using X rays in applying the BSS to this practice. Regulators will find it useful for reviewing applications for authorization and for inspection of the practice. Users of radiation in radiology may follow the guidance provided in order to comply with BSS requirements or equivalent national requirements. Experts recruited on IAEA missions to advise on the implementation of the BSS for the practice of diagnostic radiology and interventional procedures using X rays are expected to use this regulatory guidance report rather than their own national regulations and guidance.
