Alpen,1997-10-22 This newly revised and updated edition of Radiation Biophysics provides an in depth description of the physics and chemistry of radiation and its effects on biological systems Coverage begins with fundamental concepts of the physics of radiation and radioactivity then progresses through the chemistry and biology of the interaction of radiation with living systems The Second Edition of this highly praised text includes major revisions which reflect the rapid advances in the field New material covers recent developments in the fields of carcinogenesis DNA repair molecular genetics and the molecular biology of oncogenes and tumor suppressor genes The book also includes extensive discussion of the practical impact of radiation on everyday life Covers the fundamentals of radiation physics in a manner that is understandable to students and professionals with a limited physics background Includes problem sets and exercises to aid both teachers and students Discusses radioactivity internally deposited radionuclides and dosimetry Analyzes the risks for occupational and non occupational workers exposed to radiation sources      **Technical Books & Monographs** United States. Energy Research and Development Administration,1974      *Radiation Biophysics (ionizing Radiations)* I U riï Borisovich Kudri a shov,2008 The book is concerned with features analysis of radiation damage to living matter at different levels of its organisation beginning from the molecular level The general theory of the mechanisms of biological action of radiation based on four logically connected principles of radiation biology is presented for the first time The book contains abundant material on primary and secondary processes of the response of living systems to radiation the mechanisms of direct and indirect action of radiation through radiolysis of water and lipids a detailed consideration of the theory of targets DNA and biological membranes and

the problems of high and low dose irradiation in the context of present day The systemic response of the cell to irradiation oxidative stress endogenous background radioresistance damage and repair of biological membranes and DNA systemic protection against radiation is approximated Presentation of these important problems is preceded by an up to date evaluation of some aspects regarding dosimetry of ionising radiation Technical Books and Monographs Sponsored by the U.S. Atomic Energy Commission U.S. Atomic Energy Commission,1976 Technical Books & Monographs United States.
