Bean,1975 During the 1972 IFYGL alert periods the highly instrumented NOAA RFF DC 6 aircraft was used to record the time series of wind temperature and water vapor at heights ranging from 18 to 300 m above the surface of Lake Ontario The aircraft was equipped with a gust probe system a fast response thermistor a microwave refractometer for water vapor measurements and a downward pointing IR system as well as the normal in flight measurement of standard meteorological parameters The time series records have been found to display a highly intermittent nature This is especially the case for evaporation when in the fall Polar Continental outbreaks move across the lake In particular such an outbreak of cold dry air moved across the lake at 12 15 m s<sup>-1</sup> on 9 October 1972 This resulted in the air temperature at 30 m above the lake to drop from 12 to 6 C while the evaporation rate increased to more than 1 cm day<sup>-1</sup> This may be compared with the 0.5 cm day<sup>-1</sup> normal evaporation observed in the tropics during BOMEX Furthermore IR lake surface temperatures show cold regions 5 C along the north shore presumably due to strong upwelling while the center and south shore regions of the lake were of the order of 12 to 15C The turbulent flux quantities of

momentum heat and water vapor were obtained by the eddy correlation technique and their spectra were determined at several locations over the lake surface for 3 minute sampling lengths At the aircraft speed of 92 m s<sup>-1</sup> this represents a flight path of 17 km for both along wind and constant fetch patterns The spectra demonstrate the tendency for the peak value to march to higher wavelengths with increasing height

*Monthly Weather Review*, 1984 **Blurring organizational issues and social phenomena in the age of technology: a multidisciplinary perspective** Nemesio Castillo, Alberto Ochoa, Chloé Malépart, 2013-04-29 The predominant view in economic theory until the crisis of the 70s argued the great enterprise was the key player in the innovation process this was conceived as an activity that unfolded in specific areas with clear responsibilities and predetermined objectives This operating structure of the innovative process was functional demand model that favored the standardization of production The innovative process was developed predominantly by firms that had a domain oligopolistic market from which they made windfall with which financed the research and development activities In this context the role of SMEs in the innovation process is limited to covering the portion of the market that big companies left

Florida Cumulus Seeding Experiment for Drought Mitigation W. L. Woodley, 1971 **Advances in SAR Remote Sensing of Oceans** Xiaofeng Li, Huadong Guo, Kun-Shan Chen, Xiaofeng Yang, 2018-10-12 The oceans cover approximately 71% of Earth's surface 90% of the biosphere and contains 97% of Earth's water Since the first launch of SEASAT satellite in 1978 an increasing number of SAR satellites have or will become available such as the European Space Agency's ERS 1 2 ENVISAT and Sentinel 1 series the Canadian RADARSAT 1 2 and the upcoming RADARSAT Constellation Mission series satellites the Italian COSMO SkyMed satellites the German TERRASAR X and TANDEM X and the Chinese GAOFEN 3 SAR among others Recently European Space Agency has launched a new generation of SAR satellites Sentinel 1A in 2014 and Sentinel 1B in 2016 These SAR satellites provide researchers with free and open SAR images necessary to carry out their research on the global oceans The scope of *Advances in SAR Remote Sensing of Oceans* is to demonstrate the types of information that can be obtained from SAR images of the oceans and the cutting edge methods needed for analysing SAR images Written by leading experts in the field and divided into four sections the book presents the basic principles of radar backscattering from the ocean surface introduces the recent progresses in SAR remote sensing of dynamic coastal environment and management discusses the state of the art methods to monitor parameters or phenomena related to the dynamic ocean environment and deals specifically with new
