Review of Progress in Quantitative Nondestructive Evaluation, Volume 20, 2001 *Review of Progress in Quantitative Nondestructive Evaluation*, 2001 Review of Progress in Quantitative Nondestructive Evaluation - Volume 20A/B Donald O. Thompson, Dale E. Chimenti, 2001-05-11 The Review of Progress in Quantitative NDE is the world's leading conference in reporting annually new research and development results in quantitative NDE. The conference reports on both fundamental and applied advances in NDE and promotes communication between the research and engineering communities and emphasize current reporting of work in progress. Attendees include representatives of academia including students, industry and government with approximately one half coming from the United States and the other half from overseas. This volume represents the best report of ongoing work that is available anywhere. Connections and overlap with the medical diagnostic community are highlighted. Review of Progress in Quantitative Nondestructive Evaluation Donald Thompson, Dale E. Chimenti, 1982-09 Perhaps the largest symposium held annually in the area of quantitative nondestructive evaluation is the one which resulted in this book. The 1981 Review of Progress in Quantitative Nondestructive Evaluation NDE was held August 2-7 at the University of Colorado in Boulder. While the review was sponsored by the Materials Laboratory of the Air Force Wright Aeronautical Laboratories and the Defense Advanced Research Projects Agency as part of their sponsored research conducted through the Ames Laboratory of the U.S. Department of Energy, nearly 300 attendees representing other government agencies and the industrial and university communities as well participated in the technical presentations, poster sessions and discussions. The program emphasized various areas of interest in quantitative NDE including topics related to the development of quantitative ultrasonic and eddy current techniques, other emerging techniques, considerations of improvements needed in the probability of flaw detection and engineering applications which follow from technology transfer of research results. An example of this transfer is the utilization of the Born inversion algorithm for flaw sizing. The keynote address NDE: A Key to Enhanced Productivity was delivered by Dr. Norman Tallan, Chief Scientist at the Air Force Materials Laboratory. Dr. Tallan's presentation concerned the importance and potential pay-off of moving the NDE inspection procedure forward to provide in-process inspection and control for manufacturing. This step requires the utilization of concepts and research pursued in quantitative NDE activities and the initiation of other key steps. **Books In Print 2004-2005** Ed Bowker, Staff, Staff Bowker, Ed, 2004 NASA Langley Scientific and Technical Information Output 2000, 2001
