Robotics is to bring in a timely fashion the latest advances and developments in robotics on the basis of their significance and quality. It is our hope that the greater dissemination of research developments will stimulate more exchanges and collaborations among the research community and contribute to further advancement of this rapidly growing field. As one of robotics pioneering symposia, ISRR, the International Symposium on Robotics Research, has established over the past two decades some of the field's most fundamental and lasting contributions. With the launching of STAR, this and other thematic symposia devoted to excellence in robotics and an important platform for closer links and extended reach within the research community. The Tenth edition of *Robotics Research*, edited by Raymond Jarvis and Alex Zelinsky, offers in its 11

part, a volume, a collection of a broad range of topics in robotics. The content of these contributions provides a wide coverage of the current state of robotics research, the advances and challenges in its theoretical foundation and technology basis, and the developments in its traditional and new areas of applications. This volume presents a collection of papers presented at the 16th International Symposium of Robotic Research, ISRR. ISRR is the biennial meeting of the International Foundation of Robotic Research, IFRR, and its 16th edition took place in Singapore over the period 16th to 19th December 2013. The ISRR is the longest running series of robotics research meetings and dates back to the very earliest days of robotics as a research discipline. This 16th ISRR meeting was held in the 30th anniversary year of the very first meeting which took place in Bretton Woods, New Hampshire, USA, in August 1983, and represents thirty years at the forefront of ideas in robotics research. As for the previous symposia, ISRR 2013 followed up on the successful concept of a mixture of invited contributions and open submissions. 16 of the contributions were invited contributions from outstanding researchers selected by the IFRR officers and the program committee, and the other contributions were chosen among the open submissions after peer review. This selection process resulted in a truly excellent technical program which featured some of the very best of robotic research. These papers were presented in a single track interactive format which enables real conversations between speakers and the audience. The symposium contributions contained in this volume report on a variety of new robotics research results covering a broad spectrum, organized into traditional ISRR categories: control, design, intelligence, and learning, manipulation, perception, and planning. The World Yearbook of Robotics Research and Development Sbornik Statei, 2013-04-17. How quickly the technological flavour of the month changes. At the beginning of the 1980s, many saw robotics as being something of a panacea for those problems in the manufacturing industries which had been exacerbated by the world recession. Those working at the time in the field of robotics stressed that robots themselves were only part of the solution. Yet in many quarters the hype for the new technology apparently knew few bounds, resulting inexorably in many industries painfully

discovering for themselves a new realism closely followed by disillusionment In its wider sense the term robotics covers an extremely broad spectrum of technologies ranging from extremely flexible highly sensory and integrated systems capable of handling a very diverse product range through to comparatively inflexible high volume systems which can merely handle slightly different variations of the same basic product As a result of the one buzzword referring to such a variety of actual system types the disillusionment which started to become apparent during the early 1980s acted as something of a double edged sword A given company might consider a particular robotics based technological solution to its production problems find that it was unsuitable and so renounce all robotics approaches as inappropriate Yet just because one position on that spectrum of technological solutions was unsuitable for the company should not have led them to assume that there was no other robotics solution that was appropriate NBS/RIA Robotics Research Workshop James Sacra Albus, 1981
