Extended Families Ven Begamudré, 2017-09 The work

begins with the story of the authors grandfather and from there tells the story of much of his extended family on both sides of his family though the focus is primarily on his father's side. The story continually comes back to the author's relationship with his parents, their fights and separation first in India and then in Canada and the United States, his father's anger and constant need to move to new places and his mother's depression which culminates in her eventual suicide in India. Interspersed in this personal history are stories of Hindu gods, many of whom the extended family and Ven's immediate family are named after, and fictional accounts of family stories that have been passed down from generation to generation. From the author, In *Extended Families: A Memoir of India*, award-winning author Ven Begamudr traces the history of both sides of his family. Using many styles and genres, journal entries, memoirs, fiction, poetry, and photographs, he reconstructs the stories of a South Indian family of high-class Brahmins who guarded a treasury, built dams and power stations, and became electrical engineers, the women as well as the men. One branch of the family even found itself caught up in the Japanese invasion of Burma in early 1942. Through it all, he brings to life a story that is both timeless and universal.

Mobile Robots Janusz Będkowski, 2011-12-02 The objective of this book is to cover advances of mobile robotics and related technologies applied for multi-robot systems design and development. Design of control system is a complex issue requiring the application of information technologies to link the robots into a single network. Human-robot interface becomes a demanding task, especially when we try to use sophisticated methods for brain signal processing. Generated electrophysiological signals can be used to command different devices such as cars, wheelchair, or even video games. A number of developments in navigation and path planning, including parallel programming, can be observed. Cooperative path planning, formation control of multi-robotic agents, communication, and distance measurement between agents are shown. Training of the mobile robot operators is a very difficult task also because of several factors related to different task execution. The presented improvement is related to environment model generation based on autonomous mobile robot observations.

Smart Homes and Beyond C. Nugent, J.C. Augusto, 2006-06-13 The thought behind this publication is to continue to develop an active research community dedicated to explore how Smart Homes and Health Telematics can foster independent living and offer an enhanced quality of life for ageing and disabled people. As we begin to witness the effects of changing demographics on today's society, we begin to appreciate that the increase in the number of

elderly and in the prevalence of those suffering from chronic disease and disabilities are likely to further increase in the next two to three decades To react to the needs of this cohort to provide an environment within which the people can reside for as long as possible whilst maintaining their quality of life and independence is a widespread concern for all As such there is real benefit to further investigate the role of technologies to address these changes and subsequently offer practical solutions to support independent living The editors feel that within the realms of Smart Homes and Health Telematics real affordable and useful services can be developed which will have the necessary underlying technological and service delivery infrastructures to allow seamless integration into existing care delivery paradigms The introduction of technology can provide a positive impact However it is necessary to avoid any detrimental effects if reliance upon technology within the home environment becomes so great that people will not leave their own home in fear of losing the support once outside of the home or its close proximity This publication focuses on promoting personal autonomy and extending the quality of life by considering including smart services inside and outside of the home
