Geomorphology of Desert Environments Anthony J. Parsons, A. D. Abrahams, 2009-03-20 About one third of the Earth's land surface experiences a desert climate and this area supports approximately 15% of the planet's population. This percentage continues to grow and with this growth comes the need to acquire and apply an understanding of desert geomorphology. Such an understanding is vital in managing scarce and fragile resources and in mitigating natural hazards. This authoritative reference book is comprehensive in its coverage of the geomorphology of desert environments and is arranged thematically. It begins with an overview of global deserts, proceeds through treatments of weathering, hillslopes, rivers, piedmonts, lake basins, and aeolian surfaces, and concludes with a discussion of the role of climatic change. Written by a team of international authors, all of whom are active in the field, the chapters cover the spectrum of desert geomorphology.

Treatise on Geomorphology, 2013-02-27 The changing focus and approach of geomorphic research suggests that the time is opportune for a summary of the state of the discipline. The number of peer-reviewed papers published in geomorphic journals has grown steadily for more than two decades, and more importantly, the diversity of authors with respect to geographic location and disciplinary background (geography, geology, ecology, civil engineering, computer science, geographic information science, and others) has expanded dramatically. As more good minds are drawn to geomorphology and the breadth of the peer-reviewed literature grows, an effective summary of contemporary geomorphic knowledge becomes increasingly difficult. The fourteen volumes of this *Treatise on Geomorphology* will provide an important reference for users from undergraduate students looking for term paper topics to graduate students starting a literature review for their thesis work and professionals seeking a concise summary of a particular topic. Information on the historical development of diverse topics within geomorphology provides context for ongoing research; discussion of research strategies, equipment, and field methods; laboratory experiments and numerical simulations reflect the multiple approaches to understanding Earth's surfaces; and summaries of outstanding research questions highlight future challenges and suggest productive new avenues for research. Our future ability to adapt to geomorphic changes in the critical zone very much hinges upon how well landform scientists comprehend the dynamics of Earth's diverse surfaces. This *Treatise on Geomorphology* provides a useful synthesis of the state of the discipline as well as highlighting productive research directions that educators and students/researchers will find useful. Geomorphology has advanced greatly in the last 10 years to become a very interdisciplinary field. Undergraduate students looking for term paper topics to graduate students starting a literature review for their thesis work and professionals seeking a concise summary of a particular topic will find the answers they need in this broad reference work, which has been designed and written to accommodate their diverse backgrounds and levels of understanding. Editor in Chief Prof. J. F. Shroder of the University of Nebraska at Omaha is past president of the QG/G section of the Geological Society of America and present Trustee of the GSA Foundation, while being well respected in the geomorphology research community.

and having won numerous awards in the field A host of noted international geomorphologists have contributed state of the art chapters to the work Readers can be guaranteed that every chapter in this extensive work has been critically reviewed for consistency and accuracy by the World expert Volume Editors and by the Editor in Chief himself No other reference work exists in the area of Geomorphology that offers the breadth and depth of information contained in this 14 volume masterpiece From the foundations and history of geomorphology through to geomorphological innovations and computer modelling and the past and future states of landform science no stone has been left unturned Urban Geomorphology Mary J

Thornbush, Casey D. Allen, 2018-07-17 Urban Geomorphology Landforms and Processes in Cities addresses the human impacts on landscapes through occupation urbanization and development as a contribution to anthropogenic geomorphology or anthropogeomorphology This includes a focus on land clearance conservation issues pollution decay and erosion urban climate and anthropogenic climate change These topics as well as others are considered to shed more light on the human transformation of natural landscapes and the environmental impacts and geomorphological hazards that environmental change can encompass Its multidisciplinary approach is appropriate for audiences from a range of disciplines and professions from geologists conservationists and land use planners to architects and developers Urban Geomorphology not only transcends disciplines but also covers varied spatial temporal frameworks and presents a diverse set of approaches and solutions to human impacts and geomorphological hazards within urban landscapes Features a cross disciplinary perspective highlighting the importance of the geosciences to environmental science engineering and public policy Focuses on the built environment as the location of concentrated human impacts and change Provides an international scope including case studies from urban areas around the world **Biodeterioration of Stone Surfaces** Larry St.Clair, Mark

Seaward, 2012-11-02 This is a timely volume in view of the considerable interest currently shown in the preservation of our cultural heritage and the extensive and growing literature on the subject Unfortunately the latter is to be found in a wide variety of published sources some aimed at a very specific readership and therefore not all that accessible to those who need this resource The present volume draws together a spectrum of biodeterioration work from across the world to provide an overview of the materials examined and the methodologies employed to elucidate the nature of the problems as well as an extensive and current bibliographical resource on lichen biodeterioration Biodeterioration of historical and culturally important stone substrata is a complex problem to be addressed Easy risk free solutions are simply not available to be dealt with by other than a wide range of expertise Successful resolution of this issue will inevitably require a multidisciplinary effort where biologists work in close cooperation with ecologists geologists geochemists crystallographers cultural property conservators archaeologists anthropologists and historians in order to recommend the most effective management scheme The advantage of this approach is obvious multidisciplinary management teams with good leadership can ask more appropriate questions while developing much more thoughtful and informed decisions **Desert Aeolian Processes** V.P.

Tchakerian,2012-12-06 The idea for this volume came during the dryland sessions of the Association of American Geographers meeting in San Diego in April 1992 The large number of papers devoted to aeolian processes and landforms indicated to me that aeolian geomorphology had come of age and the last 15 years or so had produced a plethora of papers books and edited volumes on all aspects of aeolian geomorphology Chapter one is my tentative attempt to place developments in aeolian geomorphology in a historical perspective and to contemplate some thoughts about the future The fourteen papers selected address a wide range of issues ranging from micro scale studies devoted to aeolian dust sediment transport and rock varnish in ventifacts to medium scale studies of dunes and dune forms reverse desertification and macro scale studies of ergs and sand transport pathways The American Southwest particularly the spectacular and unique Mojave Desert of California is featured prominently in seven chapters I hope this volume provides students and colleagues some new perspectives in aeolian geomorphology as well as pathways for future work *Arid and Semi-Arid Geomorphology* Andrew S. The Biology of Arid Soils

Blair Steven, 2017-07-24. Soils have been called the most complex microbial ecosystems on Earth. A single gram of soil can harbor millions of microbial cells and thousands of species. However, certain soil environments such as those experiencing dramatic change, exposing new initial soils or that are limited in precipitation, limit the number of species able to survive in these systems. In this respect, these environments offer unparalleled opportunities to uncover the factors that control the development and maintenance of complex microbial ecosystems. This book collects chapters that discuss the abiotic factors that structure arid and initial soil communities as well as the diversity and structure of the biological communities in these soils, from viruses to plants.
