The Oxford Handbook of the History of Modern Cosmology Helge Kragh, Malcolm Longair, 2019-03-06 Scientific and popular literature on modern cosmology is very extensive however scholarly works on the historical development of cosmology are few and scattered The Oxford Handbook of the History of Modern Cosmology offers a comprehensive and authoritative account of the history of cosmology from the late nineteenth century to the early twenty first century It provides historical background to what we know about the universe today including not only the successes but also the many false starts Big Bang theory features prominently but so does the defunct steady state theory The book starts with a chapter on the pre Einstein period 1860 1910 and ends with chapters on modern developments such as inflation dark energy and multiverse hypotheses The chapters are organized chronologically with some focusing on theory and others more on observations and technological advances A few of the chapters discuss more general ideas relating to larger contexts such as politics economy philosophy and world views

Compendium on Light Speed Travel James Essig, 2017-05-26 Some theoreticians contemplate and formulate the physics of tachyons which are hypothetical particles that would always travel faster than light but which could never slow down to the speed of light just as they anticipate sublight speed massive particles never being able to achieve light speed So my theoretical work on the physics and kinematics of light speed massive systems sets me apart from general trends in the theoretical field of relativistic astronautics This book is a continuation of how and why we may be able to at some future time travel at the speed of light

Regulus Missile Service and Launching Instructions U. S. Navy, 2009-02 The Regulus missile was a direct outgrowth of World War II The success of Germany's V 1 buzz bombs and the awesome power of the atomic bomb suggested that developing a submarine launched nuclear armed guided missile was an imperative The Chance Vought Aircraft Company won the contract for Regulus with a bold proposal Their missile resembled a pilotless jet aircraft and during the test phase was equipped with landing gear allowing the missile to be recovered rather than expended during the tests Regulus would be radio controlled either by a chase aircraft or by a nearby ship or submarine and it could carry a nuclear payload JATO boosters enabled submarine launch of the Regulus It would be deployed aboard five submarines They conducted the nation's first nuclear deterrent patrols off the coast of the Soviet Union in 1959 1964 Originally printed by the U S Navy and Chance Vought this handbook was restricted It was declassified and is here reprinted in book form
