What Are Rocks?

Rocks are solid materials formed from crystals of one or more minerals. The Earth's crust is made up of many different types of rock.

What Are Different Types of Rock?

There are three main types of rock: igneous, sedimentary, and metamorphic. Each type is formed in a different way.

Sedimentary

Sedimentary rocks are formed when other rocks are broken down by wind and water. These rocks are then carried by rivers and oceans to the bottom of seas or oceans. Over millions of years, the sediment is buried and compressed. Over time, the pressure causes the sediment to turn into rock. These sedimentary rocks are formed from the remains of dead animals or plants.
