Meltdown Jorge Daniel Taillant,2021-09-19 We hear about pieces of ice the size of

continents breaking off of Antarctica rapidly melting glaciers in the Himalayas and ice sheets in the Arctic crumbling to the sea but does it really matter Will melting glaciers change our lives Absolutely Glaciers are built and destroyed during ice ages and interglacial periods These massive ice bodies hold three quarters of our freshwater yet we don't have laws to protect them from climate change When they melt they increase sea levels alter the Earth's reflectivity wreak havoc for ocean and air currents destabilize global ecosystems warm our climate and bring on floods that swamp millions of acres of coastal land The critical ecological role they play to keep our global climate stable and the environmental functions they provide wither And as climate change warms glacier cores collapsing glacier ice triggers tsunamis that send deadly massive ice blocks rocks earth and billions of liters of water rushing down mountain valleys It has happened before in the Himalayas the Central Andes the Rockies and Western Cascades and the European Alps and it will happen again In his new book *Meltdown* Jorge Daniel Taillant takes readers deeper into the cryosphere connecting the dots between climate change glacier melt and the impacts that receding glacier ice brings to livability on Earth to our environments and to our communities Taillant walks us through the little known realm of the periglacial environment a world of invisible subsurface rock glaciers that will outlive exposed glaciers as climate change destroys surface ice He also looks at actions that can help stop climate change and save glaciers exploring how society politics and our leaders have responded to address the global COVID 19 pandemic and yet largely continue to fail to address the even larger looming and escalating crisis of climate change Our climate is deteriorating at a drastic rate and it's happening right in front of us *Meltdown* is about glaciers and their unfolding demise during one of the most critical moments of our planet's geological history If we can reconsider glaciers in a whole new light and understand the critical role they play in our own sustainability we may be able to save the cryosphere
