**Haploids in Crop Improvement I** Y. P. S. Bajaj, 2012-12-06 Haploid plants have the gametophytic number of chromosomes They are of great importance especially in studies on the induction of mutations and also for the production of homozygous plants they are needed in large numbers The conventional methods employed by plant breeders for their production are cumbersome time consuming laborious and rather inefficient Sometimes it may take years to produce a pure line However with the introduction of in vitro techniques especially anther culture for the induction of androgenesis it has become increasingly evident that these methods considerably accelerate the production of haploids for plant breeding programs During the last decade in vitro produced haploids have been incorporated into breeding programs of many agricultural crops and positive results have been obtained especially with rice wheat potato barley maize asparagus sunflower brassica tobacco etc Among these rice and wheat are the best examples in which a number of improved varieties have been released In wheat the breeding cycle can be shortened by three or four generations when the pollen haploid breeding method is used instead of conventional cross breeding The release of the wheat varieties Jinghua 1 and Florin is a typical example of what can be achieved with other crops Taking these developments into consideration the present volume Haploids in Crop Improvement I was compiled

**Legumes and Oilseed Crops I** Y. P. S. Bajaj, 2012-12-06 *Medicinal and Aromatic Plants I* Y. P. S. **Medicinal and Aromatic Plants** Tariq Aftab, Khalid Rehman Hakeem, 2021-03-27 Before the concept of history began humans undoubtedly acquired life benefits by discovering medicinal and aromatic plants MAPs that were food and medicine Today a variety of available herbs and spices are used and enjoyed throughout the world and continue to promote good health The international market is also quite welcoming for MAPs and essential oils The increasing environment and nature conscious buyers encourage producers to produce high quality essential oils These consumer choices lead to growing preference for organic and herbal based products in the world market As the benefits of medicinal and aromatic plants are recognized these plants will have a special role for humans in the future Until last century the production of botanicals relies to a large degree on wild collection However the increasing commercial collection largely unmonitored trade and habitat loss lead to an incomparably growing pressure on plant populations in the wild Therefore medicinal and aromatic plants are of high priority for conservation Given the above we bring forth a comprehensive volume Medicinal and Aromatic Plants Healthcare and Industrial Applications highlighting the various healthcare industrial and pharmaceutical applications that are being used on these immensely important MAPs and its future prospects This collection of chapters from the different areas dealing with MAPs caters to the need of all those who are working or have interest in the above topic

**Wheat** Y. P. S. Bajaj, 2013-03-09 Wheat which is the second most important cereal crop in the world is being grown in a wide range of climates over an area of about 228 945 thousand ha with a production of about 535 842 MT in the world Bread wheat Triticum aestivum L accounts for 80% of the wheat consumption however it is attacked by a large number of pests and pathogens rusts and smuts cause enormous damage to the crop and reduce the yield drastically in some areas The major breeding objectives for wheat include grain yield earliness resistance to lodging and diseases spikelet fertility cold tolerance leaf duration and net assimilation rate fertilizer utilization coleoptile length nutritional value organoleptic qualities and the improvement of characters such as color and milling yield The breeding of wheat by traditional methods has been practiced for centuries however it has only now come to a stage where these methods are insufficient to make any further breakthrough or to cope with the world's demand Although numerous varieties are released every year around the world they do not last long and long term objectives cannot be realized unless more genetic variability is generated Moreover the introduction of exotic genetic stocks and their cultivation over large areas results in the depletion and loss of the native germplasm pool
