Structure and Function of the Extracellular Matrix Bela Suki,2021-11-27 Structure and Function of the Extracellular Matrix A Multiscale Quantitative Approach introduces biomechanics and biophysics with applications to understand the biological function of the extracellular matrix in health and disease A general multiscale approach is followed by investigating behavior from the scale of single molecules through fibrils and fibers to tissues of various organ systems Through mathematical models and structural information quantitative description of the extracellular matrix function is derived with tissue specific details The book introduces the properties and organization of extracellular matrix components and quantitative models of the matrix and guides the reader through predicting functional properties This book integrates evolutionary biology with multiscale structure to quantitatively understand the function of the extracellular matrix This approach allows a fresh look into normal functioning as well as the pathological alterations of the extracellular matrix Professor Suki s book is written to be useful to undergraduates graduate students and researchers interested in the quantitative aspects of the extracellular matrix Researchers working in mechanotransduction respiratory and cardiovascular mechanics and multiscale biomechanics of tendon cartilage skin and bone may also be interested in this book Examines the evolutionary origins and consequences of the extracellular matrix Delivers the first book to quantitatively treat the extracellular matrix as a multiscale system Presents problems and a set of computational laboratory projects in various chapters to aid teaching and learning Provides an introduction to the properties and organization of the extracellular matrix components      **Cumulated Index Medicus** ,1976      **Biomedical Index to PHS-supported Research: pt. **Populations: Theoretical Basis, Part 1** ,2024-07-24 Redox Signaling in Wound Healing in Elderly Populations Theoretical Basis Part 1 deals with wounds in different types and locations diabetic ischemic post operational in subcellular and macro dimensions examine their relationship with aging aim to target deteriorating redox signaling cascades and will also focus on promising therapeutic approaches Understanding the indication for the use of new therapeutics targeting the illuminated pathways in wound healing will help adjust treatment regimens befitting modern medicine Ineffective redox adaptation and disseminated oxidative injury are the hallmarks of continuing oxidative stress However oxidative stress cannot be simply described as the imbalance between ROS formation and antioxidant defense capacity it also covers impairment in redox sensing and signaling pathways The term oxidative stress is an expression that is losing its use in modern redox biology It is now an accepted fact that ROS cannot be described as an apparent enemy or friend Its optimum level modulates signal transduction and stress responses by acting as a second messenger for redox sensitive cascades Redox dependent second messengers are generated in subcellular locations according to specific rules and regulations Their appearance depends on cellular needs in response to external and internal stimuli variations A good understanding of the wound healing cascades which deteriorate especially in advancing ages is critical in developing the most appropriate approach To understand the redox signaling mechanisms and healing cascades in wound healing to pioneer new pharmacoactive drugs that can be developed based on these mechanisms to reveal the deteriorating dynamics in the elderly patient group and to propose new treatment methods suitable for the advanced age group The only source where all intracellular and intercellular redox homeostasis cascades and mechanisms of wound healing in elderly people Deals with wounds in different types and locations diabetic ischemic post operational in subcellular and macro dimensions examine their relationship with aging and aim to target deteriorating cascades It will help adjust redox based treatment regimens befitting modern medicine **Mechanical Properties of Aging Soft Tissues** Brian Derby,Riaz Akhtar,2014-10-08 Exploring the structure and mechanics of aging soft tissues this edited volume presents authoritative reviews from leading experts on a range of tissues including skin tendons

vasculature and plantar soft tissues It provides an overview of in vivo and in vitro measurement techniques including state of the art methodologies as well as focusing on the structural changes that occur within the main components of these tissues resulting in detrimental mechanical property changes It also highlights the current challenges of this field and offers an insight into future developments Age related changes in the mechanical properties of soft tissues have a profound effect on human morbidity and mortality and with changing global demographics there is growing interest in this area There has been increasing interest in robustly characterizing these mechanical changes to develop structure property relationships and growing awareness of the need for enhanced predictive models for computational simulations This book seeks to address the challenges involved in applying these engineering techniques to reliably characterize these tissues Focusing on a wide range of tissues and presenting cutting edge techniques this book provides an invaluable reference to academics and researchers in a range of disciplines including biomechanics materials science tissue engineering life sciences and biomedicine

**Vitreous** J. Sebag, 2014-10-01 The vitreous body long has been the most mysterious of all ocular structures owing perhaps to its seeming simplicity There have been few concerted sustained efforts to unravel the mysteries of how vitreous is composed and what role it plays in normal physiology as well as pathology Over the years however many studies have produced important findings concerning vitreous biochemistry structure physiology and pathobiology Published on the 25th anniversary of Sebag's first book on Vitreous this second installment is nearly five times longer than its predecessor reflecting how much has been learned in the past quarter century This well constructed compendium not only addresses the most current scientific knowledge but also reviews clinical perspectives in a manner that lends richness to the scope of the book Written by 90 authors this book has 56 chapters organized into 7 sections Biochemistry Anatomy Development and Aging Pathology Pathobiology Physiology and Pharmacotherapy Posterior Vitreo Retinal Surgery Peripheral Vitreo Retinal Surgery and Pharmacologic Vitreolysis With a foreword by Coleman Lincoff and an introduction by Wallace Foulds Sebag's latest tome on vitreous is destined to be the authoritative text for years to come

**The International Handbook on Aging** Erdman P. Palmore, Frank Whittington, Suzanne Kunkel, 2009-10-27 The United Nations World Assembly on Aging has made advancing health and well being into old age a worldwide call for action And this text at hand shows us what researchers worldwide are doing to answer that call Here three of America's most esteemed experts on aging lead a global team of contributors each an expert in his or her country to show us what the top challenges of each nation are and what top research is being done there to meet those While we cannot predict with absolute certainty all of the issues that will arise over the next 20 years we can anticipate some and we must start now to prepare for these challenges an expert from the U S Department of Health and Human Services warned at a recent UN World Assembly on Aging Needed response to the global population shift is not just the responsibility of governments but will be a product of wise long term decisions made by individuals and societies she explained In most nations globally populations are graying and the number of people aged 65

and older is vastly increasing creating a larger segment of senior citizens than the world has ever before seen Across human history the elderly accounted for no more than 3 percent of the world population By the year 2030 the elderly are expected to make up about 25 percent of the world population And while longevity is of course seen as a great success longer lifespan for such masses also creates dilemmas For example the incidence of dementia has already increased significantly with an 11 fold increase in people aged 65 and older in the US since the turn of the century and a similar increase in aged people in Scotland has researchers there scrambling to find treatments for what they expect will be a 75 percent increase in dementia over the next 25 years Chronic diseases that come with aging are already taxing health care systems in the US and around the world to Japan with most experts aware their current health systems would be overrun and lack enough staff and facilities to handle the needs of an elderly population multiplying largely in the coming two decades Increases in psychological issues such as dealing with the depression often striking aged people are impending too as are social issues such as how families and public policies will deal with the changing shape of the family
