Kelly, Emily Williams Kelly, Adam Crabtree, 2010 Current mainstream opinion in psychology neuroscience and philosophy of mind holds that all aspects of human mind and consciousness are generated by physical processes occurring in brains Views of this sort have dominated recent scholarly publication The present volume however demonstrates empirically that this reductive materialism is not only incomplete but false The authors systematically marshal evidence for a variety of psychological phenomena that are extremely difficult and in some cases clearly impossible to account for in conventional physicalist terms Topics addressed include phenomena of extreme psychophysical influence memory psychological automatisms and secondary personality near death experiences and allied phenomena genius level

creativity and mystical states of consciousness both spontaneous and drug induced The authors further show that these rogue phenomena are more readily accommodated by an alternative transmission or filter theory of mind brain relations advanced over a century ago by a largely forgotten genius F W H Myers and developed further by his friend and colleague William James This theory moreover ratifies the commonsense conception of human beings as causally effective conscious agents and is fully compatible with leading edge physics and neuroscience The book should command the attention of all open minded persons concerned with the still unsolved mysteries of the mind Dante's Heavens Edmund Garratt Gardner,1900
