**USSR. ,1964** One World and Our Knowledge of It J.F. Rosenberg, 2012-12-06 Philosophy Aristotle is well known to have said begins in wonder So of course does everything else Astronomy begins in wonder at the moving lights in the sky biology in wonder at the living creatures of the earth psychology in wonder at the intricacies and eccentricities of our distinctively human form of life So at best wonder is only a necessary condition for philosophy What is peculiar about philosophers is what we are inclined to wonder about We wonder about everything In particular we wonder about astronomy and biology and psychology and about philosophy about whether and how such disciplines are possible and crucially about whether and how such disciplines fit together We don't just wonder about everything We wonder about everything all at once Philosophers are general practitioners Things stand ill with our discipline today There was quite recently at large in America an occasional publication under the title Jobs in Philosophy The title rested upon a confusion and the publication furthered the confusion upon which it rested For it did not in fact list jobs in philosophy It couldn't

**Light List ,1955** **Families as Learning Environments for Children** Luis Laosa, 2013-11-11 The chapters in this volume reflect the work and thoughts of a group of researchers interested in studying families as learning environments for children As we proceed in our quest to identify and understand with some specificity

the familial factors associated with the intellectual and social development of children the time is ripe for the reintroduction of families as units of study in psychological and educational research With the increasing focus on the changing organization of the modern family it is of more than academic interest to identify those variables that play a significant role in the child's development Such knowledge certainly should help in the planning and design of appropriate and credible applications These chapters representing a broad spectrum of research derive from papers presented and discussed at a working conference on families as learning environments sponsored by Educational Testing Service in Princeton New Jersey Following the conference the papers were revised and edited for inclusion in this volume We are indebted to a number of people whose contributions helped make the conference a success Samuel J Messick and Winton H Manning for their support Jan Flaughner Jessie Cryer Linda Kozelski and Betty Clausen for assistance with local arrangements and William Nemceff Kathleen Lingle and Kalina Gonska for help with the audio recording of the proceedings

Constructing the Present Camden Alexander McKenna, 2025-06-17 Constructing the Present An Investigation into Time Consciousness investigates what time is like for us as subjects and answers the question of how our experiential present comes to be While addressing a variety of outstanding debates in the field the book proposes that our temporal phenomenology is best understood as transcending traditional forms

of analysis The book ultimately concludes that time is not something we experience but rather the way we construct our experience of the world In the spirit of William James McKenna suggests that the present occupies a window of time known as the specious present McKenna claims that the duration of this subjective window is determined by the real temporal properties of experience but also that experiential events are as Edmund Husserl believed temporally directed to varying degrees and in nested fashion in a way that affects their particular qualitative character This specific proposal is called ERA the Extensional Retentional Analysis of temporal phenomenology Besides doing justice to our temporal phenomenology McKenna s overall position aligns with contemporary predictive approaches to the cognitive architecture of the mind This exciting new way of thinking sees the brain as a predictive engine whose ongoing activities construct our rich subjective experiences Taking inspiration from this movement Constructing the Present introduces a complementary position called Temporality as Iterative Expectation Revision or TIER According to TIER temporal phenomenology results from predictive activities of the brain occurring throughout an integrated multilevel cognitive processing hierarchy Such a system is sensitive to the ongoing flux of environmental stimuli while retaining prior expectations and constantly updating our experiences probabilistically to ensure survival The actual activity of this ongoing process rather than its content gives rise to the felt present which is continuously constructed anew Constructing the Present An Investigation into Time Consciousness functions as a scholarly defense of a provocative plausible and cohesive set of theses while also confronting numerous adjacent philosophical issues along the way By approaching the subject from the standpoint of empirically informed philosophy of mind the present work fills a significant gap in the literature The book should appeal especially to philosophically inclined researchers and students interested in cognitive science psychology and neuroscience as well as philosophy of mind

**Politics of Control** Chang-tai Hung, 2021-01-31 Using a unique interdisciplinary cultural institutional analysis Politics of Control is the first comprehensive study of how in the early decades of the People s Republic of China the Chinese Communist Party reshaped people s minds using multiple methods of control With newly available archival material internal circulars memoirs interviews and site visits the book explores the fascinating world of mass media book publishing education religion parks museums and architecture during the formative years of the republic When the Communists assumed power in 1949 they projected themselves as not only military victors but also as peace restorers and cultural protectors Believing that they needed to manage culture in every arena they created an interlocking system of agencies and regulations that was supervised at the center Documents show however that there was internal conflict Censors introduced early at the Beijing Daily operated under the twofold leadership of municipal level editors but with final authorization from the Communist Party Propaganda Department Politics of Control looks behind the office doors where the ideological split between Party chairman Mao Zedong and head of state Liu Shaoqi made pragmatic editors bite their pencil erasers and hope for the best Book publishing followed a similar multi tier system preventing undesirable texts from getting into the hands of the public In

addition to designing a plan to nurture a new generation of Chinese revolutionaries the party state developed community centers that served as cultural propaganda stations New urban parks were used to stage political rallies for major campaigns and public trials where threatening sects could be attacked A fascinating part of the story is the way in which architecture and museums were used to promote ethnic unity under the Chinese party state umbrella Besides revealing how interlocking systems resulted in a pervasive method of control Politics of Control also examines how this system was influenced by the Soviet Union and how nevertheless Chinese nationalism always took precedence Chang tai Hung convincingly argues that the PRC s formative period defined the nature of the Communist regime and its future development The methods of cultural control have changed over time but many continue to have relevance today [Travel](#) ,1920

*Why Red Doesn't Sound Like a Bell* J. Kevin O'Regan,2011-08-01 The book starts by analyzing the problem of how we can see so well despite what to an engineer might seem like horrendous defects of our eyes An explanation is provided by a new way of thinking about seeing the sensorimotor approach In the second part of the book the sensorimotor approach is extended to all sensory experience It is used to elucidate an outstanding mystery of consciousness namely why unlike today s robots humans actually can feel things The approach makes predictions and opens research avenues among them the phenomena of change blindness sensory substitution and looked but failed to see as well as results

**Making up the Mind** Chris Frith, 2013-05-20 Written by one of the world s leading neuroscientists Making Up the Mind is the first accessible account of experimental studies showing how the brain creates our mental world Uses evidence from brain imaging psychological experiments and studies of patients to explore the relationship between the mind and the brain Demonstrates that our knowledge of both the mental and physical comes to us through models created by our brain Shows how the brain makes communication of ideas from one mind to another possible      **Perception** Frank Jackson, 1977-05-05 What is the nature of and what is the relationship between external objects and our visual perceptual experience of them In this book Frank Jackson defends the answers provided by the traditional Representative theory of perception He argues among other things that we are never immediately aware of external objects that they are the causes of our perceptual

experiences and that they have only the primary qualities In the course of the argument sense data and the distinction between mediate and immediate perception receive detailed defences and the author criticises attempts to reduce perceiving to believing and to show that the Representative theory makes the external world unknowable Jackson recognises that his views are unfashionable but argues in detail that they are to be preferred to their currently favoured competitors It will become an obvious point of reference for all future work on the philosophy of perception
