The Early Universe and Observational Cosmology Nora Bretón, Jorge L. Cervantes-Cota, Marcelo Salgado, 2004-05-14 Spectacular experimental advances in observational cosmology have helped raise cosmology to the status of a genuine science and it is now possible to test many speculative theoretical issues and to obtain reliable values for the key parameters defining our observable universe This book has emerged from selected lectures given at the Mexican School on Gravitation and Mathematical Physics by leaders in their field Conceived as both a broad survey and as topical coverage of the latest developments it will benefit graduate students and newcomers to this field and provide researchers in the field with a modern source of reference

Simulations of Dark Energy Cosmologies Elise Jennings, 2012-05-27 A major outstanding problem in physics is understanding the nature of the dark energy that is driving the accelerating expansion of the Universe This thesis makes a significant contribution by demonstrating for the first time using state of the art computer simulations that the interpretation of future galaxy survey measurements is far more subtle than is widely assumed and that a major revision to our models of these effects is urgently needed The work contained in the thesis was used by the WiggleZ dark energy survey to measure the growth rate of cosmic structure in 2011 and had a direct impact on the design of the surveys to be conducted by the European Space Agency's Euclid mission a 650 million euro project to measure dark energy

Particle Physics and the Universe Claes Fransson, 2001 It is generally felt in the cosmology and particle astrophysics community that we have just entered an era which later can only be looked back upon as a golden age Thanks to the rapid technical development with powerful new telescopes and other detectors taken into operation at an impressive rate and the accompanying advancement of theoretical ideas the picture of the past present and future Universe is getting ever clearer Some of the most exciting new findings and expected future developments are discussed in this invaluable volume The topics covered include the physics of the early Universe and ultra high energy processes Emphasis is also put on neutrino physics and astrophysics with the evidence for non zero neutrino masses emerging from both solar neutrinos and atmospheric neutrinos covered in great depth Another field with interesting new results concerns the basic cosmological parameters where both traditional methods and the potential of new ones like deep supernova surveys and acoustic peak detections in the cosmic microwave background are thoroughly discussed Various aspects of the dark matter problem such as gravitational lensing estimates of galaxy masses cluster evolution and hot cluster electron distortions of the thermal microwave background spectrum are also discussed as are particle physics candidates of dark matter and methods to detect them Cosmic rays of matter and antimatter are included as a topic and so is the problem of the enigmatic dark energy of the vacuum Contents Cosmology with Clusters of Galaxies N A Bahcall Radiochemical Solar Neutrino Experiments and Implications T A Kirsten Evidence for Neutrino Oscillation Observed in Super Kamiokande Y Totsuka High Energy Cosmic Neutrinos S W Barwick Discovery of the Cosmic Microwave Background D T Wilkinson Starlight in the Universe P Madau
