The development of mathematical competence both by humans as a species over millennia and by individuals over their lifetimes is a fascinating aspect of human cognition This book explores when and why the rudiments of mathematical capability first appeared among human beings what its fundamental concepts are and how and why it has grown into the richly branching complex of specialties that it is today It discusses whether the truths of mathematics are discoveries or inventions and what prompts the emergence of concepts that appear to be descriptive of nothing in human experience Also covered is the role of esthetics in mathematics What exactly are mathematicians seeing when they describe a mathematical entity as beautiful There is discussion of whether mathematical disability is distinguishable from a general cognitive deficit and whether the potential for mathematical reasoning is best developed through instruction This volume is unique in the vast range of psychological questions it covers as revealed in the work habits and products of numerous mathematicians It provides fascinating reading for researchers and students with an interest in cognition in general and mathematical cognition in particular Instructors of mathematics will also find the book s insights illuminating *Readings in Mathematical Social Science* Paul F. Lazarsfeld,Neil W. Henry,1966 **Readings in Mathematical Psychology: Computers. Programming a model of human concept formulation** Robert Duncan Luce,Robert R. Task Force on Science Policy,1986 **Handbook of Cognition** Koen Lamberts,Robert L. Goldstone,2005 This book provides a synthesis of the most up to date and advanced work in cognitive psychology in a single volume The editors have gathered together a team of world leading researchers in specialist areas of the field both traditional and new areas to present a benchmark in terms of theoretical insight and advances in methodology of the discipline a thorough overview of the most significant and current research in cognitive psychology Core and established topics such as memory attention categorization perception and language are considered in depth and from a fresh perspective yet three chapters on cognitive neuroscience and two chapters on computational and mathematical modelling are a feature of this book [Studies in Econometrics, Time Series, and Multivariate Statistics](#) Samuel Karlin,Takeshi Amemiya,Leo A. and Multivariate Statistics covers the theoretical and practical aspects of econometrics social sciences time series and multivariate statistics This book is organized into three parts encompassing 28 chapters Part I contains studies on logit model normal discriminant analysis maximum likelihood estimation abnormal selection bias and regression analysis with a categorized explanatory variable This part also deals with prediction based tests for misspecification in nonlinear simultaneous systems and the identification in models with autoregressive errors Part II highlights studies in time series including time series analysis of error correction models time series model identification linear random fields segmentation of time series and some basic asymptotic theory for linear processes in time series analysis Part III contains papers on optimality properties in discrete multivariate analysis Anderson's probability inequality and asymptotic distributions of test statistics This part also presents the comparison of measures multivariate majorization and of experiments for some multivariate normal situations Studies on Bayes procedures for combining independent F tests and the limit theorems on high dimensional spheres and Stiefel manifolds are included This book will prove useful to statisticians mathematicians and advance mathematics students

Choice, Decision, and Measurement A.A.J. Marley, 2019-05-23 This volume is the result of a conference held at the University of California Irvine on the topics that provide its title choice decision and measurement The conference was planned and the volume prepared in honor of Professor R Duncan Luce on his 70th birthday Following a short autobiographical statement by Luce the volume is organized into four topics to each of which Luce has made significant contributions The book provides an overview of current issues in each area and presents some of the best recent theoretical and empirical work Personal reflections on Luce and his work begin each section These reflections were written by outstanding senior researchers Peter Fishburn Preference and Decision Making Patrick Suppes Measurement Theory and Axiomatic Systems William J McGill Psychophysics and Reaction Time and W K Estes Choice Identification and Categorization The first section presents recent theoretical and empirical work on descriptive models of decision making and theoretical results on general probabilistic models of choice and ranking Luce's recent theoretical and empirical work on rank and sign dependent utility theory is important in many of these contributions The second section presents results from psychophysics probabilistic measurement aggregation of expert opinion and test theory The third section presents various process oriented models with supportive data for tasks such as redundant signal detection forced choice and absolute identification The final section contains theory and data on categorization and attention and general theoretical results for developing and testing models in these domains

Logical Abilities in Children: Volume 4 Daniel N. Osherson, 2017-08-14 Originally published in 1976 this fourth and final volume in a series that met with critical acclaim is concerned with a certain kind of answer to the question What distinguishes the concepts that are a natural part of human languages from those that are merely expressible in language The kind of answers contemplated rely on formal properties of the logics that overlay the two sorts of concepts The author presents a substantive theory of natural concepts which helps to make concrete the methodological proposals In order to make the theory more manageable it is restricted to sentential modifiers expressed in English Although these proposals are substantive the methodology they exemplify may be of even more significance Some of the ideas in the author's approach derive from the work of Chomsky and several issues relevant to the growth of logical thinking are also treated with data that speak to questions raised in Volume 3 concerning qualitative change through development This final volume in the series will be essential reading for all concerned with both logical abilities in children their development and novel methodological approaches to research bearing on this and related issues
