Rethinking Cognitive Computation Turing And The Science Of The Mind:

Rethinking Cognitive Computation Andy Wells, 2017-09-16 Rethinking Cognitive Computation explores the hypothesis that the mind is a computer. The exploration is based on the pioneering work of Alan Turing and presents the first detailed exposition of his theory of computation intended specifically for psychologists. Turing's bold and beautiful theory provides an ideal perspective from which to evaluate current computational thinking about the mind. The book examines the strengths and weaknesses of symbol systems and connectionist theorising and proposes a new approach called ecological functionalism. Ecological functionalism is based on Turing's fundamental insights and extends them by drawing on contemporary theories of concurrent and distributed computation to cover a wide range of psychological domains. Ecological functionalism provides the basis for a powerful unified theory of great scope which includes social as well as individual processes. The book is intended for teaching but will also be of interest to researchers in cognitive science, psychology and philosophy of mind. Andrew Wells is a lecturer in psychology at the London School of Economics and Political Science. He has qualifications in philosophy, psychology and computer science and has published papers on a range of psychological topics.

Rethinking Cognitive Computation Andy Wells, 2005-12-17 This book provides a detailed understanding of the computational foundations of cognitive science. The author makes a critical evaluation of the symbol processing and connectionist approaches which constitute the current mainstream and offers a new computational framework for cognitive science.

The Modern Legacy of Gibson's Affordances for the Sciences of Organisms Madhur Mangalam, Alen Hajnal, Damian G. Kelty-Stephen, 2024-02-13 This edited collection provides a comprehensive and empirically informed discussion on affordances and their role in studying goal directed behavior, covering philosophical, experimental, psychological, neuroscientific and applied perspectives. Showcasing the work of expert contributors from different backgrounds, the book inspires new directions for future research in affordances. Chapters address questions relating to the definition and perception of affordances, their advantages over stimuli, the relationship between affordances and behavior, and how systems engage with affordances in different tasks and intentions. This question-based format provides a distinctive perspective that allows for a thorough exploration of the expansive field of affordance research. This book serves as a crucial resource for seasoned scientists, researchers and undergraduate and graduate students in the fields of ecological psychology, sensation and perception, cognition and the philosophy of cognitive science, as well as non-academic individuals interested in mind sciences broadly construed. It provides valuable insights and knowledge in these fields, making it an essential reference for those seeking to deepen their understanding in the areas of perception and cognition. Chapter 5 of this book is freely available as a downloadable Open Access PDF at <http://www.taylorfrancis.com> under a Creative Commons Attribution Non-Commercial No Derivatives CC BY-NC-ND 4.0 license.

Model-Based Reasoning in Science and Technology Ángel Nepomuceno-Fernández, Lorenzo Magnani, Francisco J. Salguero-Lamillar, Cristina Barés-Gómez, Matthieu

Fontaine,2019-10-24 This book discusses how scientific and other types of cognition make use of models abduction and explanatory reasoning in order to produce important and innovative changes in theories and concepts Gathering revised contributions presented at the international conference on Model Based Reasoning MBR18 held on October 24 26 2018 in Seville Spain the book is divided into three main parts The first focuses on models reasoning and representation It highlights key theoretical concepts from an applied perspective and addresses issues concerning information visualization experimental methods and design The second part goes a step further examining abduction problem solving and reasoning The respective papers assess different types of reasoning and discuss various concepts of inference and creativity and their relationship with experimental data In turn the third part reports on a number of epistemological and technological issues By analyzing possible contradictions in modern research and describing representative case studies this part is intended to foster new discussions and stimulate new ideas All in all the book provides researchers and graduate students in the fields of applied philosophy epistemology cognitive science and artificial intelligence alike with an authoritative snapshot of the latest theories and applications of model based reasoning Cognitive Dynamics in Linguistic Interactions Alexander

Kravchenko,2012-03-15 In the era of globalization issues of international and intercultural communication in different professional areas become even more acute There is a growing demand to increase the efficiency of higher learning educational programs called upon to enhance second or foreign language communicative competence of would be specialists Yet the existing methods of teaching a foreign or second language are far from being satisfactory in terms of expected efficiency This is symptomatic of a general methodological problem we lack holistic understanding of how natural language shapes the cognitive domain of human interactions Orthodox linguistic science is based on a premise that language is a tool for expressing and conveying thought thus making communication between humans possible This dualistic assumption ignores the fact that just as there may be no language without interacting human subjects there may be no human thought or largely humanness to speak of without languaging as species specific behavior because we as humans happen in language Maturana The study of language therefore must focus on the dynamics of linguistic interactions and dialogue should be pursued between applied linguists and theoreticians about the conceptual theoretic foundations of linguistic education This volume is just such an attempt *Extended Cognition and the Dynamics of Algorithmic Skills* Simone Pinna,2017-01-21 This

book describes a novel methodology for studying algorithmic skills intended as cognitive activities related to rule based symbolic transformation and argues that some human computational abilities may be interpreted and analyzed as genuine examples of extended cognition It shows that the performance of these abilities relies not only on innate neurocognitive systems or language related skills but also on external tools and general agent environment interactions Further it asserts that a low level analysis based on a set of core neurocognitive systems linking numbers and language is not sufficient to explain some specific forms of high level numerical skills like those involved in algorithm execution To this end it reports on

the design of a cognitive architecture for modeling all the relevant features involved in the execution of algorithmic strategies including external tools such as paper and pencils The first part of the book discusses the philosophical premises for endorsing and justifying a position in philosophy of mind that links a modified form of computationalism with some recent theoretical and scientific developments like those introduced by the so called dynamical approach to cognition The second part is dedicated to the description of a Turing machine inspired cognitive architecture expressly designed to formalize all kinds of algorithmic strategies

Culture and Cognition Bradley Franks, 2011-04-05 Human culture depends on human minds for its creation meaning and exchange But minds also depend on culture for their contents and processes Past resolutions to this circularity problem have tended to give too much weight to one side and too little weight to the other In this groundbreaking and timely work Bradley Franks demonstrates how a more plausible resolution to the circularity problem emerges from reframing mind and culture and their relations in evolutionary terms He proposes an alternative evolutionary approach that draws on views of mind as embodied and situated By grounding social construction in evolution evolution of mind is intrinsically connected to culture resolving the circularity problem In developing his theory Franks provides a balanced critical assessment of modularity based and social constructionist approaches to understanding mind and culture

Machine Dreaming and Consciousness J. F. Pagel, Philip Kirshtein, 2017-04-13 Machine Dreaming and Consciousness is the first book to discuss the questions raised by the advent of machine dreaming Artificial intelligence AI systems meeting criteria of primary and self reflexive consciousness are often utilized to extend the human interface creating waking experiences that resemble the human dream Surprisingly AI systems also easily meet all human based operational criteria for dreaming These dreams are far different from anthropomorphic dreaming including such processes as fuzzy logic liquid illogic and integration instability all processes that may be necessary in both biologic and artificial systems to extend creative capacity Today multi linear AI systems are being built to resemble the structural framework of the human central nervous system The creation of the biologic framework of dreaming emotions associative memories and visual imagery is well within our technical capacity AI dreams potentially portend the further development of consciousness in these systems This focus on AI dreaming raises even larger questions In many ways dreaming defines our humanity What is humanly special about the states of dreaming And what are we losing when we limit our focus to its technical and biologic structure and extend the capacity for dreaming into our artificial creations Machine Dreaming and Consciousness provides thorough discussion of these issues for neuroscientists and other researchers investigating consciousness and cognition Addresses the function and role of dream like processing in AI systems Describes the functions of dreaming in the creative process of both humans and machines Presents an alternative approach to the philosophy of machine consciousness Provides thorough discussion of machine dreaming and consciousness for neuroscientists and other researchers investigating consciousness and cognition
