Ethology and Behavioral Ecology of Sea Otters and Polar Bears Randall W. Davis, Anthony M. Pagano, 2021-07-03 Sea otters and polar bears are carnivorous marine mammals that still resemble their terrestrial ancestors Compared with Cetacea whales and dolphins Sirenia dugongs and manatees and Pinnipedia seals sea lions and walrus they are less adapted for an aquatic life and the most recently evolved among marine mammals Sea otters are amphibious but seldom come ashore and polar bears primarily occur on sea ice or along the shore When at sea both species spend most of their time swimming at the surface or making short shallow dives when foraging or pursuing prey Indeed polar bears rarely pursue seals in water Nevertheless polar bears are powerful swimmers and will stalk seals from the water As with many other large carnivores they are solitary hunters Although sea otters are gregarious and form aggregations at sea called rafts they are primarily asocial Except during mating the principal interaction among sea otters occurs between a female and offspring during the six month dependency period In large carnivores e g wolves and lions that feed on ungulates sociality and cooperation are favored because of the need to capture large prey and defend carcasses Polar bears which are the largest terrestrial carnivore are solitary hunters of seals and are neither gregarious nor social Males and females briefly associate during courtship and mating During this time males aggressively compete for females At other times males generally avoid each other except for aggregations of males that form while summering on land and females with cubs avoid males which are known for infanticide As with sea otters the interaction of polar bears outside of mating occurs between a female and her offspring during the 2 3 year dependency period This interaction is critically important when altricial cubs are born in the winter den This book provides new insight into the ethology and behavioral ecology of sea otters and polar bears Each chapter reviews the discoveries of previous studies and integrates recent research using new techniques and technology The authors also address historic and current anthropogenic challenges for their survival as climate change alters entire marine ecosystems

VanBlaricom,James A. Estes,2012-12-06 The impetus for this volume comes from two sources The first is scientific by virtue of a preference for certain large benthic invertebrates as food sea otters have interesting and significant effects on the structure and dynamics of nearshore communities in the North Pacific The second is political be cause of the precarious status of the sea otter population in coastal California the U S Fish and Wildlife Service USFWS announced in June 1984 a proposal to establish a new population of sea otters at San Nicolas Island off southern California The proposal is based on the premise that risks of catastrophic losses of sea otters due to large oil spills are greatly reduced by distributing the population among two geographically separate locations The federal laws of the U S require that USFWS publish an Environmental Impact Statement EIS regarding the proposed translocation of sea otters to San Nicolas Island The EIS is intended to be an assessment of likely bio logical social and economic effects of the proposal In final form the EIS has an important role in the decision of federal management authority in this case the Secretary of the Interior of the U S to accept or reject the proposal
