Todd, Thomas Trenholm Hills, Trevor W. Robbins, 2012 This book explores how we search for resources in our minds and in the world The authors examine the evolution and adaptive functions of search the neural underpinnings of goal searching mechanisms across species psychological models of search in memory decision making and visual scenes and applications of search behaviour *Searching Behaviour* W.J. Bell, 2012-12-06 This is a book about proximate mechanisms Although some theoretical structure is used to introduce the subject the intent is to offer a comprehensive view of the mechanistic side of searching or foraging so as to balance the current emphasis of books on mathematical and functional models It seems to me that the pendulum needs to swing back to studies of how animals behave and that maybe in so doing models will become valuable again in driving experimentation I have probably included too many examples in this book and some are even presented in great detail Hopefully they provide a complete picture of the kind of animals used the experimental setup the kinds of data yielded and how the data were analysed I have done this in response to frustrating experiences of reading chapters in behavioural ecology books that provide insufficient information with which to evaluate an author's conclusion **Geography** Sue Thomas, 1999 A practical teacher's resource for Key Stage 1 geography relevant to the National Curriculum and the Scottish Guidelines for Environmental Studies 5-14 It covers all the key requirements and provides sections of structured lesson plans on all main geographical themes 80 linked copymasters including both information and pupil activity sheets **Metaheuristics-Based Materials Optimization** Harbinder Singh, Shailendra Rajput, Abhishek Sharma, 2025-02-27 Metaheuristics Based Materials Optimization Enhancing Materials Applications provides a guide to using metaheuristics based computational techniques to improve the design performance and broaden the applications of various materials The book fuses optimization algorithms with materials engineering enabling more accurate simulations and models for analyzing and predicting the behavior of materials under different conditions allowing for design of materials with improved performance durability energy efficiency cost effectiveness and

other desired characteristics Metaheuristic approaches for material synthesis and design structural optimization material characterization property prediction and process optimization are all covered as are comparisons of different algorithms step by step guidelines on how to implement them and case studies of them being applied in real world settings Provides a guide to using metaheuristics based computational techniques to improve the design performance and broaden the applications of various materials Presents real world case studies as well as commonly encountered problems and their solutions Allows for more accurate modeling better material design and development of materials tailored for specific applications Artificial Intelligence Resources in Control and Automation Engineering Evelio J.
