Pacific Coast Committee, 1915 The Pacific Coast region

of the United States contains many distinctive natural features and much unique material for scientific research. Many of the problems presented here are peculiar to the West but in their larger aspects they have a significant bearing upon fundamental questions of world wide concern both in the field of natural science and in the relation of these problems to the affairs of men. However interesting western materials may be the traveler wishing to know of them has little time for study and sources of information which might be used are frequently scattered and inaccessible. Recognizing the need for ready information on nature and science in the West the Pacific Coast Committee of the American Association for the Advancement of Science has considered it desirable in this year of the two expositions celebrating the opening of the Panama Canal to bring together in hand book form concise data upon matters of general interest for the use of travelers in this region. A special committee was appointed to assemble the material and to enlist the assistance of men well informed upon the subjects to be discussed. The descriptions contained in this book have been prepared with care by specialists and the volume is addressed to all travelers in the West who wish to know the significant features of the land through which they pass.

taken from Introductory Note page v *What Shall We Do Next?* Anna Mallett, Margaret Mallett, 2012-11-17 If you find yourself looking after a preschool child for the first time or after a gap of some years you will welcome this book. It explains how to encourage children's sense of wonder by adopting a creative approach to a variety of activities both in and out of doors. Some need little or no preparation and there is help with simple preparations for others. *What Shall We Do Next* shows how sharing books can enrich many practical activities. A special feature is the inclusion of early fact books as well as stories. There are suggestions for the following: Music and water play for babies and for making dens, secret drawers and cubs for preschoolers. Organizing exciting visits to beaches, parks and gardens. Preparing for interesting visits to museums, train stations and zoos. Developing the inner world of the imagination. Reading and listening to stories and poems. Engaging in role play. Cooking, drawing, painting and dressing up. Choosing early fact books, stories and rhymes and guidance on audio resources, television programmes and DVDs. The ideal resource for those times when children are bouncing with energy or becoming bored. They'll soon be absorbed in these exciting activities. Hannah Edmunds, former teacher and chair of school governors, now organizer of story times for groups of young children.

International Catalogue of Scientific Literature, 1903 *Working with Nature in Aotearoa New Zealand* Friederike Gesing, 2016-05-15 Working with nature and not against it is a global trend in coastal management. This ethnography of coastal protection follows the increasingly popular approach of soft protection to the Aotearoa New Zealand coast. Friederike Gesing analyses a political controversy over hard and soft protection measures and introduces a growing community of practice involved in projects of working with nature. Dune restoration, volunteers, coastal management experts, surfer scientists and Maori conservationists are engaged in projects ranging from do it yourself erosion control to the reconstruction of native nature and soft engineering in concert with natural processes. With soft protection Gesing argues we can witness a new sociotechnical imaginary in the making. **Chambers's**
