

1

In the beginning

The formation of the Solar System began when a gigantic cloud of dust and gas began to collapse. As it collapsed, it started to spin more and more rapidly, forming a dense, flat disk shape.

This swirling disk of dust is called a **protoplanetary disk**.

2

Birth of a star

The enormous cloud collapsed due to gravity and the centre became hotter and hotter until it began to fuse (combine) hydrogen atoms into helium. This released a huge amount of energy, which resulted in a shining star, called the Sun.

3

The Solar System

The remaining material from the cloud began to clump together to form planets around the Sun. The closest material to the Sun formed the rocky (terrestrial) planets, but further away from the Sun, cooler gases formed the enormous gas giant planets.

The birth of our Solar System

Planet Earth is just a small part of the network of planets, moons, asteroids, and comets that orbit around the Sun, called the Solar System. But how did the Solar System begin? The answer lies in an event that happened around 4.6 billion years ago...

Some of the lightest gases were spun right to the cold outer edge of the disk.

Smaller, leftover pieces of material became asteroids, comets, and moons.
