Political Modernisation and the Environment J. van Tatenhove, B. Arts, P. Leroy, 2013-03-14 Recent years have witnessed a substantial change in both the organisation and substance of environmental policy both national and international Western societies have seen a change in the relationships between the state the market and civil society leading to new conceptions of governance a process here called political modernisation that gives rise to the institutionalisation of new policy arrangements An environmental policy arrangement refers to the organisation and substance of a policy domain in terms of policy coalitions policy discourses rules of the game and resources The book uses these theoretical notions to analyze changes in organisation substance and governance in several environmental policy domains such as infrastructure policies global policies on climate change and biodiversity green planning and agriculture policy Changing relationships between the state the market and civil society caused by processes of globalization privatisation and individualisation have resulted in a plurality of policy arrangements in different domains Despite the fact that environmental politics has been substantially renewed there is a delicate balance between traditional and new policy arrangements One of the main themes of the book is the explanation of this balance Political Modernisation and the Environment J. Van Tatenhove, B. Arts, P. LeRoy, 2014-09-01

Institutional Dynamics in Environmental Governance Bas Arts, Pieter Leroy, 2006-09-09 Environmental policy in its broadest context has been significantly revitalized and renewed during the last two decades That observation is nothing new attested to by the number of publications conferences and both private and public projects that have been initiated However our understanding of the dynamics of this renewal has generally been informed by studies on single policies and projects leaving us with a limited understanding of what the newness consists of in terms of an integrated perspective This book presents fresh analyses of a number of well known cases but does so from one comprehensive view the so called policy arrangement approach Cases discussed range over organic farming integrated water management nature policy cultural heritage policy integrated region oriented policy corporate environmental management and target group policy always in search of the commonality of experience and conclusions to be drawn in understanding the past and in formulating future perspectives

Branding in Governance and Public Management Jasper Eshuis, E.H.

Klijn,2012-01-30 Politicians and public managers utilize branding to communicate with the public as well as to position themselves within the ever present media now so central to political and administrative life They must further contend with stakeholders holding contradictory opinions about the nature of a problem the desirable solutions and the values at stake Branding is used as a strategy to manage perceptions motivate stakeholders communicate clear messages in the media and position policies and projects Brands have a unique ability to simplify such messages and motivate different actors to invest their energy in governance processes Public administration scholars so far have however paid little attention to branding This book provides a systematic analysis of branding as phenomenon in governance It deals with the nature of public branding its relation to existing theories in public administration the way branding is used as a managerial strategy in governance processes and the risks and limitations of branding Branding in Public Governance and Management highlights the growing importance of public branding as a public management strategy to influence political events decision making processes and outcomes in governance processes

Food, Globalization and Sustainability Peter Oosterveer,David A. Sonnenfeld,2012-06-25 Food is increasingly traded internationally thereby transforming the organization of food production and consumption globally and influencing most food related practices This transition is generating unfamiliar challenges related to sustainability of food provision the social impacts of international trade and global food governance Distance in time and space between food producers and consumers is increasing and new concerns are arising These include the environmental impact of food production and trade animal welfare the health and safety of food and the social and economic impact of international food trade This book provides an overview of the principal conceptual frameworks that have been developed for understanding these changes It shows how conventional regulation of food provision through sovereign national governments is becoming elusive as the distinctions between domestic and international and between public and private spheres disappear At the same time multi national companies and supranational institutions put serious limits to governmental interventions In this context other social actors including food retailers and NGOs are shown to take up innovative roles in governing food provision but their contribution to agro food sustainability is under continuous scrutiny The authors apply these themes in several detailed case studies including organic fair trade local food and fish On the basis of these cases future developments are explored with a focus on the respective roles of agricultural producers retailers and consumers

Cycling Pathways Henk-Jan Dekker,2025-10-01 In an effort to fight climate change many cities try to boost their cycling levels They often look towards the Dutch for guidance However historians have only begun to uncover how and why the Netherlands became the premier cycling country of the world Why were Dutch cyclists so successful in their fight for

a place on the road Cycling Pathways The Politics and Governance of Dutch Cycling Infrastructure 1920 2020 explores the long political struggle that culminated in today's high cycling levels Delving into the archives it uncovers the important role of social movements and shows in detail how these interacted with national provincial and urban engineers and policymakers to govern the distribution of road space and construction of cycling infrastructure It discusses a wide range of topics ranging from activists to engineering committees from urban commuters to recreational cyclists and from the early 1900s to today in order to uncover the long and all but forgotten history of Dutch cycling governance *Greening Society* P.J. Driessen, P. Glasbergen, 2013-04-17 This book can be regarded as a monograph on the debates and developments in Dutch environmental policy It has been written with a specific perspective in mind First and foremost the line of approach we have taken was from a multidisciplinary social science point of view The trend in environmental policy is looked at from the angle of sociology policy studies and political science Secondly all analyses depart from the paradigm shift concept This particular paradigm shift is based on the fact that a radical change has taken shape over the years in the way environmental issues are handled Previously environmental policy had always been characterised by a top down approach in which government determined the actual objectives of policy and assumed that it could win over business non governmental organisations and citizens to act in line with those objectives There was also a great deal of faith in the technical solutions to environmental issues Today's environmental policy is based on a totally different philosophy Environmental objectives are now reached in association with business non governmental organisations and citizens These actors are also involved in bringing environmental policy into practice In other words the implementation of policy has a more interactive nature New relationships emerge between government the market and civil society and policy discourses also become integrated The environmental interest is more often weighed against the economic interests the spatial development and against social justice Just Sustainabilities Julian Agyeman, Robert Bullard, Bob Evans, 2012-04-27 Environmental activists and academics alike are realizing that a sustainable society must be a just one Environmental degradation is almost always linked to questions of human equality and quality of life Throughout the world those segments of the population that have the least political power and are the most marginalized are selectively victimized by environmental crises This book argues that social and environmental justice within and between nations should be an integral part of the policies and agreements that promote sustainable development The book addresses the links between environmental quality and human equality and between sustainability and environmental justice **Environmental Governance and Decentralisation** Albert Breton, 2008-01-01 This book examines how different countries define and address environmental issues specifically in relation to intergovernmental relations the creation of institutions the assignment of powers and the success of alternative solutions It also investigates whether a systemic view of the environment has influenced the policy making process The broad perspective adopted includes a detailed analysis of seventeen countries in six continents by scholars from a range of disciplines economics political science environmental

science and law thus producing novel material that moves away from the conventional treatment of decentralisation and the environment in economic literature Providing a comprehensive and up to date analysis of environmental governance worldwide this book will be of great interest to researchers and students in environmental economics environmental politics governance and decentralisation It will also appeal to practitioners and policymakers with responsibilities over the environment

Transitions to Sustainable Development John Grin, Jan Rotmans, Johan Schot, 2010-05-26 Over the past few decades there has been a growing concern about the social and environmental risks which have come along with the progress achieved through a variety of mutually intertwined modernization processes In recent years these concerns are transformed into a widely shared sense of urgency partly due to events such as the various pandemics threatening livestock and increasing awareness of the risks and realities of climate change and the energy and food crises This sense of urgency includes an awareness that our entire social system is in need of fundamental transformation But like the earlier transition between the 1750 s and 1890 s from a pre modern to a modern industrial society this second transition is also a contested one Sustainable development is only one of many options This book addresses the issue on how to understand the dynamics and governance of the second transition dynamics in order to

ensure sustainable development It will be necessary reading for students and scholars with an interest in sustainable development and long term transformative change *A Primer on Environmental Sciences* Matthew N. O. Sadiku,Uwakwe C. Chukwu,Olaniyi D. Olaleye,2022-02-09 In a modern society it is easy to forget that our society depends largely on the environmental processes that govern our world Environment refers to an aggregate of surroundings in which living beings such as humans animals and plants live and non living things exist It includes air water land living organisms and materials surrounding us The environment is an important part of our daily lives Environmental issues are now part of every career path and employment area Environmental science is an interdisciplinary field that applies principles from all the known technologies and sciences to study the environment and provide solutions to environmental problems It is the study of how the earth works and how we can deal with the environmental issues we face There is an ever demanding need for experts in this field because the environment is responsible for making our world beautiful and habitable For this reason environmental science is now being taught at high schools and higher institutions of learning Education on environmental science will empower the youths to take an active role in the world in which they live Governance for Sustainable Development Jens Newig,Jan-Peter Voß,Jochen Monstadt,2013-09-13 Sustainable development stirs up debate about the capacities of political steering and governance The complexity of the task expounds limits of steering in three dimensions goals knowledge and power Sustainability goals are subject to changing and controversial risk perceptions values and interests Moreover knowledge of the coupled dynamics of society technology and nature is limited Finally the power to shape structural change in society and technology is distributed across a multitude of actors and societal subsystems Steering attempts therefore have to cope with conflict and ambivalence with uncertainty and with a lack of central control and they have to face the necessity of coordinating different actor groups and social networks This volume explores steering strategies and governance arrangements for sustainable development with a view to these problem dimensions The contributions by authors from various disciplines approach these challenges from different conceptual angles ranging from positivist managerial up to post modern constructivist perspectives By combining theoretical reflections with insights from empirical research in European and American contexts the volume maps out conditions and identifies approaches which both reflect the limits of steering and reveal options for constructively taking up the task of sustainable development in science and practice
