Friedman,Joel Spruck,2012-12-06 This IMA Volume in Mathematics and its Applications VARIATIONAL AND FREE BOUNDARY PROBLEMS is based on the proceedings of a workshop which was an integral part of the 1990 91 IMA program on Phase Transitions and Free Boundaries The aim of the workshop was to highlight new methods directions and problems in variational and free boundary theory with a concentration on novel applications of variational methods to applied problems We thank R Fosdick M E Gurtin W M Ni and L A Peletier for organizing the year long program and especially J Srock for co organizing the meeting and co editing these proceedings We also take this opportunity to thank the National Science Foundation whose financial support made the workshop possible Avner Friedman Willard Miller Jr PREFACE In a free boundary one seeks to find a solution  $u$  to a partial differential equation in a domain a part  $r$  of its boundary of which is unknown Thus both  $u$  and  $r$  must be determined In addition to the standard boundary conditions on the un known domain an additional condition must be prescribed on the free boundary A classical example is the Stefan problem of melting of ice here the temperature sat isfies the heat equation in the water region and yet this region itself or rather the ice water interface is unknown and must be determined together with the tempera ture within the water Some free boundary problems lend themselves to variational formulation
