R Is For Radish:

The Radish Genome Takeshi Nishio, Hiroyasu Kitashiba, 2017-10-04 This book summarizes the latest information and the status quo of radish genome studies to stimulate innovations and improvements in breeding techniques and to promote further advances in the field Radish *Raphanus sativus* is a member of the Brassicaceae family and is cultivated worldwide Its varieties have been diversified in terms of size shape and the color of their roots and bio components Thanks to the development of high throughput molecular techniques using next generation sequencers complete genomes of cultivated and wild radish plants have been sequenced and published with annotations of predicted genes and single nucleotide polymorphism SNP information between radish cultivars and accessions These together with the construction of a high density genetic map of radish and profiling of expression sequences in radish organs have accelerated genetic studies such as the identification of genes or loci associated with root development pungent components and plant disease resistance Providing an overview of these advances this book is a valuable resource for scientists involved in plant genetic research and crop breeding

R Is for Radish, *Genetic Improvement of Vegetable Crops* G. Kalloo, B.O. Bergh, 2012-12-02 Genetic improvement has played a vital role in enhancing the yield potential of vegetable crops There are numerous vegetable crops grown worldwide and variable degrees of research on genetics breeding and biotechnology have been conducted on these crops This book brings together the results of such research on crops grouped as alliums crucifers cucurbits leaf crops tropical underground and miscellaneous Written by eminent specialists each chapter concentrates on one crop and covers cytology genetics breeding objectives germplasm resources reproductive biology selection breeding methods heterosis and hybrid seed production quality and processing attributes and technology This unique collection will be of great value to students scientists and vegetable breeders as it provides a reference guide on genetics breeding and biotechnology of a wide range of vegetable crops

Tropical Vegetable Production Raymond A. T. George, 2010-12-02 Sustainable crop production is vital to ensure that supplies of fresh vegetables and their products are readily available However food security still remains a huge problem in areas of the world including the tropics and sub tropics where communities rely solely on subsistence farming to meet their day to day food demands It is evident that food production needs to become more sustainable to ensure economic stability and poverty reduction With this in mind Tropical Vegetable Production addresses the problems surrounding vegetable production in developing countries Divided i

Vegetable Crops Pritam Kalia, 2025-04-24 The volume on Vegetable Crops as a part of series entitled Handbooks of Crop Diversity Conservation and Use of Genetic Resources will be a unique resource first of its kind which will elaborate on origin evolution taxonomy identification chemical characterization and genetic improvement of Vegetable Crop Plants Vegetable crops are an important group of crops comprising solanaceous vegetables Cole crops Cucurbitaceous crops Bulb crops Root crops Tuber crops legume vegetables leafy salad vegetables Okra etc There is tremendous diversity within each group of vegetable crops This genetic diversity is

from the point of view of landraces and varieties of vegetable crops species used for food processing nutraceuticals pharmaceuticals etc Vegetables being an integral part of human diet being rich source of diverse nutrients such as vitamins minerals and antioxidants they play an important role in balancing the diet and tackling malnutrition Besides due to their intensive cultivation they also play an important role in enhancing per unit area production and productivity cropping intensity enhancing thereby the farmers income especially that of small and marginal farmers and providing job opportunities The genetic improvement of vegetable crops facilitate continued breeding of varieties with greater resilience to stresses and productivity is mainly dependent on overall genetic variation found in individuals belonging to the cultivated species and or ancestral species related to cultivated species of vegetable crops Since genes of interest can be tapped from plant sources for their introduction through controlled breeding processes for genetic improvement and incorporating of desirable external and internal quality traits therefore accessibility to the information about these plant genetic resources is key to the success of the breeding efforts Since there is a need of comprehensive information about the genetic resources therefore it is important to facilitate their conservation and long term sustainable use in research and improvement The comprehensive information on the availability of genetic diversity in each vegetable crop species in this volume would facilitate priority conservation in gene banks research and use in vegetable crop improvement Realizing the importance of genetic variability in the improvement of vegetable crops from the point of view of biotic and abiotic stress resistance enhanced micronutrient climate change enhanced shelf life nutraceuticals bioactive compounds especially national and international efforts further need to be stepped up for collection characterization evaluation and conservation of vegetable crops genetic resources to facilitate search for new genes research and their use in vegetable crops improvement During 21st century genomics and marker assisted tools have gained importance for hastening the crop improvement programmes by enhancing breeding efficiency Realizing that population in South Asia and Southeast Asia is facing acute problem of under and malnutrition the emphasis on dietary diversification with vegetables is therefore being stressed Besides to enhance farmers income much emphasis is being laid on development of varieties having diverse maturity growth habit resistance to diseases and insect pest to reduce the use pesticides enhanced nutrients and shelf life For these traits we have to look into landraces and wild relatives for the traits of interest Therefore it has been felt to bring out a vegetable volume with additional accessory and supplemental information analyses and specifically filtered information which can go a long way in promoting research search for new genes alleles revealing the opportunities available for exploitation of PGR in generation of cultivars to meet upcoming challenges of vegetable crop improvement and diversification and requirement of cultivars for processing nutraceutical and pharmaceutical industry which will promote contract farming This will also help identification of geographical and genetic diversity gaps for future search of new genes collections Plant Genetic Resources PGR serve as treasures of genes of interest for developing improved future vegetable varieties hybrids besides being key to scientific

efforts of developing gene pyramided varieties they are important for mitigating various challenges posed by increasing population climate change and health conscious society looking for nutraceuticals The proposed vegetable volume on agro biodiversity conservation and use of plant genetic resources with information on available genetic diversity among various groups of vegetable crops and component cultivated species with in a group of food and agriculture in all possible perspectives would be able to reflect the opportunity available for genetic engineering of vegetable crop species It will also go a long way in facilitating more predictive and productive genetic engineering programme to breed futuristic vegetable crops varieties hybrids
