The Concept of Race in Natural and Social Science E. Nathaniel Gates, 2014-05-01 Explores the concept of race The term race which originally denoted genealogical or class identity has in the comparatively brief span of 300 years taken on an entirely new meaning In the wake of the Enlightenment it came to be applied to social groups This ideological transformation coupled with a dogmatic insistence that the groups so designated were natural and not socially created gave birth to the modern notion of races as genetically distinct entities The results of this view were the encoding of race and racial hierarchies in law literature and culture How racial categories facilitate social control The articles in the series demonstrate that the classification of humans according to selected physical characteristics was an arbitrary decision that was not based on valid scientific method They also examine the impact of colonialism on the propagation of the concept and note that racial categorization is a powerful social force that is often used to promote the interests of dominant social groups Finally the collection surveys how laws based on race have been enacted around the world to deny power to minority groups A multidisciplinary resource This collection of outstanding articles brings multiple perspectives to bear on race theory and draws on a wider range of periodicals than even the largest library usually holds Even if all the articles were available on campus chances are that a student would have to track them down in several libraries and microfilm collections Providing of course that no journals were reserved for graduate students out for binding or simply missing This convenient set saves students substantial time and effort by making available all the key articles in one reliable source Authoritative commentary The series editor has put together a balanced selection of the most significant works accompanied by expert commentary A general introduction gives important background information and outlines fundamental issues current scholarship and scholarly controversies Introductions to individual volumes put the articles in context and draw attention to germinal ideas and major shifts in the field After reading the material even a beginning student will have an excellent grasp of the basics of the subject

*Race and Racism in Theory and Practice* Berel Lang, 2000 This collection of original essays by scholars from a diverse range of fields examines issues of race in a variety of historical and geographical settings ranging from classical Greece to the contemporary Americas Europe and Asia The authors provide an important perspective on race both in its theoretical origins and in its actual appearances while paying close attention to the ways in which the study of race itself has been carried on or ignored by various disciplines

The Primitive Races of Mankind Max Schmidt, 1926

**The Diagrammatics of 'Race'** Marianne Sommer, 2024-07-30 This is the first book that engages with the history of diagrams in physical evolutionary and genetic anthropology Since their establishment as scientific tools for classification in the eighteenth century diagrams have been used to determine but also to deny kinship between human groups In nineteenth century craniometry they were

omnipresent in attempts to standardize measurements on skulls for hierarchical categorization. In particular, the human family tree was central for evolutionary understandings of human diversity, being used on both sides of debates about whether humans constitute different species well into the twentieth century. With recent advances in ancient DNA analyses, the tree diagram has become more contested than ever. Does human relatedness take the shape of a network? Are human individual genomes mosaics made up of different ancestries? Sommer examines the epistemic and political role of these visual representations in the history of race as an anthropological category. How do such diagrams relate to imperial and post-colonial practices and ideologies, but also to liberal and humanist concerns? *The Diagrammatics of Race* concentrates on Western projects from the late 1700s into the present to diagrammatically define humanity, subdividing and ordering it, including the concomitant endeavors to acquire representative samples: bones, blood, or DNA from all over the world. Contributing to the diagrammatic turn in the humanities and social sciences, it reveals connections between diagrams in anthropology and other visual traditions, including in religion, linguistics, biology, genealogy, breeding, and eugenics.

**The Myth of the Jewish Race** Raphael Patai, Jennifer Patai, 1989. In this carefully researched analysis, Raphael and Jennifer Patai begin by defining race. They then develop the idea of the existence of races through history. In rich and fascinating detail, the authors consider the effects of intermarriage, interbreeding, proselytism, slavery, and concubinage on the Jewish population from Biblical times to the present. New material explores the psychological aspects of the Jewish race issue: the Jewish psyche and the consequences of the 1975 United Nations resolution equating Zionism with racism. A revised and updated scientific section on the measurable genetic, morphological, and behavioral differences between Jews and non-Jews supports the conclusion that the idea of a Jewish race is indeed a myth.

**Handbook of Research on Technoethics** Luppigini, Rocci, Adell, Rebecca, 2008-08-31. This book traces the emergence of the new interdisciplinary field of technoethics by exploring its conceptual development, important issues, and key areas of current research. Compiling 50 authoritative articles from leading researchers on the ethical dimensions of new technologies. Provided by publisher.

**Race Life of the Aryan Peoples** Joseph Pomeroy Widney, 1907.

**Idea of Race in Science** Nancy Stepan, 1982-06-18.

**Race and the Crisis of Humanism** Kay Anderson, 2012-12-06. The idea that humankind constituted a unity, albeit at different stages of development, was in the 19th century challenged with a new way of thinking. The savagery of certain races was no longer regarded as a stage in their progress towards civilisation, but as their permanent state. What caused this shift? In Kay Anderson's provocative new account, she argues that British colonial encounters in Australia from the late 1700s, with the apparently unimproved condition of the Australian Aborigine viewed against an understanding of humanity of the time that is characterised by separation from nature, precipitated a crisis in existing ideas of what it meant to be human. This lucid, intelligent, and persuasive argument will be necessary reading for all scholars and upper-level students interested in the history and theories of race, critical human geography, anthropology, and Australian and environmental studies.

*The Evolution of Racism* Pat Shipman, 2002 In an intellectually engaging narrative that mixes science and history theories and personalities Pat Shipman asks the question Can we have legitimate scientific investigations of differences among humans without sounding racist Through the original controversy over evolutionary theory in Darwin's time the corruption of evolutionary theory into eugenics the conflict between laboratory research in genetics and fieldwork in physical anthropology and biology and the continuing controversies over the heritability of intelligence criminal behavior and other traits the book explains both prewar eugenics and postwar taboos on letting the insights of genetics and evolution into the study of humanity
