Racines Des Cathedrales Larchitecture Gothique Exprebion Des Conditions Du Milieu:

Racines des cathédrales; l'architecture gothique, expression des conditions du milieu R. Bechmann, 1981 **Les racines des cathédrales** Roland Bechmann, 1981 Les racines des cathédrales Roland Bechmann, Georges Henri Rivière, 1989 De grandes possibilités des matériaux divers et abondants une main d'œuvre qualifiée et nombreuse un équipement considérable et perfectionnement de telles conditions donneront elles naissance l'architecture la plus caractéristique la plus intéressante un style Je ne le crois pas et notre époque en témoigne C'est lorsque les contraintes sont nombreuses et poussent l'ingénieur lorsqu'il faut surmonter des problèmes de toutes sortes mais aussi qu'un enthousiasme une foi une mystique poussent s'exprimer créer construire qu'une architecture véritable vient au jour expression d'un milieu d'une conjoncture et d'un peuple J'ai cherché non pas ce qui serait probablement faire la part exacte des multiples facteurs qui ont conduit la progressive apparition et au développement de l'architecture dite gothique mais simplement faire apparaître leur multiplicité et leurs interactions Le développement gothique est fondamentalement lié à l'expansion urbaine et particulièrement celle des communes On pourrait y trouver quelque analogie avec le miracle grec Or ce développement de l'esprit collectif qui n'a pas d'équivalent dans le monde romain qui lui a précédé est essentiellement la conséquence des transformations de l'agriculture l'issue de l'époque gothique il y avait une église pour deux cents habitants en France et dans l'ensemble de ces édifices il y avait de quoi abriter plus que la population tout entière On a calculé qu'en trois cents ans la France seule avait extrait charri et mis en œuvre plus de pierre que l'ancienne Égypte dans toute son histoire **Medieval Architecture, Medieval Learning** Charles M. Radding, William W. Clark, 1992-01-01 The 11th and 12th centuries witnessed a transformation of European culture from architecture and the visual arts to history philosophy theology and even law **Plotting Gothic** Stephen Murray, 2015-03-06 A historian of medieval art and architecture with a rich appreciation of literary studies Stephen Murray brings all those fields to bear on a new approach to understanding the great Gothic churches of the twelfth and thirteenth centuries Plotting Gothic positions the rhetoric of the Gothic as a series of three interlocking plots a spatial plot tied to the material construction of the churches a social plot stemming from the collaborative efforts that made Gothic output possible and a rhetorical plot involving narratives that treat the churches as objects of desire Drawing on the testimony of three witnesses involved in church building Abbot Suger of Saint Denis Gervase of Canterbury and the image maker Villard de Honnecourt and a range of secondary sources Murray traces common patterns in the way medieval buildings were represented in words and images Our witnesses provide vital information about the way the great churches of Gothic were built and the complexity of their meanings Taking a fresh approach to Gothic architecture Plotting Gothic offers an invigorating new way to understand some of the most lasting achievements of the medieval era **Internal Colonization in Medieval Europe** Felipe Fernandez-Armesto, James Muldoon, 2017-05-15 Around the year 1000 Rodulfus Glaber described France as being in the throes of a building boom He may have been the first writer to perceive the early medieval period as a Dark Age that was

ending to be replaced by a better world In the articles gathered here distinguished medieval historians discuss the ways in which this transformation took place European society was becoming more stable the climate was improving and the population increasing so that it was necessary to increase food production These circumstances in turn led to the cutting down of forests the draining of wetlands and the creation of pastures on higher elevations from which the glaciers had retreated New towns were established to serve as economic and administrative centers These developments were witness to the processes of internal colonization that helped create medieval Europe

Stereotomy José Calvo-López, 2020-08-08 This book deals with the general concepts in stereotomy and its connection with descriptive geometry the social background of its practitioners and theoreticians the general methods and tools of this technology and the specific procedures for the members built in hewn stone including arches squinches stairs and vaults ending with a chapter discussing the open problems in this field Thus it can be used as a reference book in the subject but it can also read as a compelling narrative on this subject one of the main branches of pre industrial technology Construction in hewn stone requires the use of geometrical methods and tools to assure that individual stones either blocks or voussoirs fit with one another and conform to the general shape of walls arches or vaults During the Late Middle Ages and the Renaissance such techniques and instruments were developed empirically by masons and architects Later on learned mathematicians and engineers introduced refinements in these procedures and this branch of knowledge known as stereotomy furnished much material to descriptive geometry a science born with the French Revolution which provided the foundation for projective geometry

Structural Design in Building Conservation Dimitris Theodossopoulos, 2012 Bringing together theory with current conservation technology this book explores possibilities in architectural expression alongside the technical requirements of structures International case studies are used throughout to provide the reader with examples of how real structural conservation design solutions were arrived at The inclusion of full technical details of these projects and over 150 illustrations make this a valuable resource for architects structural engineers conservation officers as well as students of these disciplines

The Wise Master Builder Nigel Hiscock, 2018-05-08 This title was first published in 2000 Did the plan of medieval churches have any underlying symbolic meaning This work re opens the debate about the importance of geometry and symbolism in medieval architectural design and argues the case for attributing an intellectual meaning to the planning of abbeys and cathedrals In challenging prevailing claims for the use of arithmetical ratios in architectural design notably those based on the square root of two Dr Hiscock advances a perspective consisting of proportions derived from the figures of Platonic geometry the square the equilateral triangle and the pentagon and provides evidence for the symbolic interpretation of these figures The investigation further reveals whole series of geometric relationships between some of England's most celebrated Norman cathedrals such as Norwich or Durham together with a wide sample from the Continent from Old St Peter's in Rome to Chartres Cathedral and sets out a comprehensive design method in each case Hiscock first demonstrates the proposition that the ideas of Christian

Platonism including number and geometry remained current and were employed in the thought of the early Middle Ages In particular he argues that they can be associated with the leading persons in the 10th century revival of monasticism and that they found expression in the white mantle of churches that spread across Western Europe at the end of the first millennium AD The book then provides a detailed analysis of the geometric proportions of church plans between the 9th and 12th centuries in Germany France and in England This research seeks to demonstrate that a coherent sequence of geometric forms can be seen in these plans forms which correspond to the key figures of Platonic geometry as understood in the context of Christian Platonist thought In conclusion the author shows how the system of design proposed could be set out on site using the known working methods of medieval masons

Elegant Design Luca Iandoli, Giuseppe Zollo, 2022-03-10 Visual information is everywhere We are constantly immersed in a flow of visual data that reshapes our social and inner world Companies and individuals are competing to conquer the public's scarce attention by inventing distinctive visual formats to stand out from the crowd How can designers inventors and product managers create designs that are quick to process as well as meaningful unique and memorable in an age characterized by constant information overload The answer is to think aesthetically Research insights at the intersection between cognitive science and art studies demonstrate that our minds can effectively process visual complexity by using aesthetic pleasure and judgement as a guide Analysing the work of great artists and designers from the perspective of how our mind appreciates beauty *Elegant Design* identifies actionable aesthetic strategies that will help you to design products and user experiences that are useful beautiful and meaningful

Bibliographie de l'histoire médiévale en France (1965-1990) Société des historiens médiévistes de l'enseignement supérieur public, 1992

Epures d'architecture Joel Sakarovitch, 1998-06-16 This is an elegant and profound homage to the discipline of descriptive geometry Sterile classroom lectures on the subject have long been the bane of engineering and architecture students and now it is widely thought that CAD computer aided design may be giving the coup de grâce to this special branch of geometry And yet modern graphics techniques are unthinkable today without the foundation that descriptive geometry provides The author traces the discipline's evolution from the 16th through to the 19th century starting with an examination of how it served the early art of stone cutting and moving on to studying its relationship to pure geometry and its curricular importance to the Ecole Polytechnique established by the National Convention Descriptive geometry is the point of juncture between the theoretical and the practical between thought and action A knowing and expansive selection of architectural drawings demonstrates this beautifully throughout the work The drawings are the readable imprints of man's three dimensional imagination the maps which give us the wherewithal to turn the space he invents into physical reality

Construire au Moyen Âge A. Salamagne, 2001

L'industrialisation du XIX^e siècle a oblitéré la mémoire du Nord. Le sud du département fut cependant jusqu'à la Révolution un grand centre européen de production de la pierre des carrières de l'Ostrevent, région située entre Douai et Valenciennes. Des centaines de chariot convoiaient jusqu'aux chantiers douaisiens ou valenciennois la pierre de grès dont les chargements remontaient encore sur de lourdes péniches la Scarpe ou l'Escaut pour alimenter de Gand, Utrecht, les grandes villes flamandes ou brabannes. À travers l'exemple des chantiers de fortification de Douai, l'auteur évoque la politique d'une ville des anciens Pays-Bas en matière de construction. Exploitant un ensemble de sources inédites, il retrace la genèse des fortifications, situe leur place dans l'histoire de l'art et étudie l'organisation et les techniques de construction dans une ville médiévale. La richesse de la documentation rassemblée permet de souligner l'activité exemplaire du bâtiment dans ces régions des anciens Pays-Bas qui explique et annonce avec son avance technologique l'essor industriel du XIX^e siècle.

De Historie herzien Historisch Genootschap te Groningen, 1987

La maison rustique Jean Cuisenier, 1991-01-01

Les travaux consacrés à l'habitation domestique sont trop souvent sans rapports avec l'histoire de l'architecture savante et avec l'anthropologie des sociétés européennes. L'ouvrage de Jean Cuisenier comble cette lacune. Il s'appuie sur les enquêtes ethnographiques les plus récentes comme celles du Corpus de l'architecture rurale française ainsi que sur des textes anciens et des documents graphiques. L'œuvre d'humanistes tels que Charles Estienne et d'architectes tels que Sebastiano Serlio, la Renaissance de théoriciens de l'habitation rurale en Angleterre et d'économistes ruraux en France aux XVIII^e et XIX^e siècles de créateurs et de penseurs comme Le Corbusier au XX^e siècle, la suite d'une collaboration avec Bill Hillier et la Bartlett School of Architecture de Londres, il renouvelle l'analyse des compositions caractéristiques de l'architecture domestique de cette période et montre combien celle-ci procède d'une véritable logique sociale. Pour les sociétés européennes de la Renaissance, l'espace domestique était inscrit dans l'ordre cosmique, placé par rapport à l'orient et à l'occident, le midi et le septentrion. Il était marqué par l'opposition entre un front et un arrière, entre une dextre et une senestre. La réflexion mathématique et la pratique architecturale ont concouru ensuite à neutraliser les différences sensibles entre lieux, effacer les oppositions significatives qui caractérisent l'espace vécu, la relation entre l'extérieur et l'intérieur, la hiérarchie des places selon la dignité des habitants, l'int

gration des pièces ou leur ségrégation selon l'agencement des circulations intérieures. Les villages radieux et les fermes radieuses de Le Corbusier ne portent-ils pas leur comble à cette géométrie et cette algèbre de la composition des lieux. En même temps qu'une analyse fine de modèles et de spécimens d'architectures variés depuis l'habitation noble la campagne jusqu'au plus petit abri de berger, l'ouvrage de Jean Cuisenier offre des moyens renouvelés pour une réflexion sur les finalités de l'architecture domestique. Jean Cuisenier, agrégé de philosophie et docteur ès lettres a été successivement professeur à l'Université de Tunis, chercheur au Centre National de la Recherche Scientifique, directeur du Centre d'ethnologie française et du Musée National des Arts et Traditions Populaires de Paris. Il dirige la revue *Ethnologie française*, le *Corpus de l'Architecture Rurale Française* et mène ses recherches principalement sur le domaine européen.
