**Guide to Geometric Regulation for Distributed Parameter Systems** Eugenio Aulisa, David Gilliam, 2015-06-18 A Practical Guide to Geometric Regulation for Distributed Parameter Systems provides an introduction to geometric control design methodologies for asymptotic tracking and disturbance rejection of infinite dimensional systems The book also introduces several new control algorithms inspired by geometric invariance and asymptotic attraction for a wide range of dynamical control systems The first part of the book is devoted to regulation of linear systems beginning with the mathematical setup general theory and solution strategy for regulation problems with bounded input and output operators The book then considers the more interesting case of unbounded control and sensing Mathematically this case is more complicated and general theorems in this area have become available only recently The authors also provide a collection of interesting linear regulation examples from physics and engineering The second part focuses on regulation for nonlinear systems It begins with a discussion of theoretical results characterizing solvability of nonlinear regulator problems with bounded input and output operators The book progresses to problems for which the geometric theory based on center manifolds does not directly apply The authors show how the idea of attractive invariance can be used to solve a series of increasingly complex regulation problems The book concludes with the solutions of challenging nonlinear regulation examples from physics and engineering Radiation Therapy Using MRI-LINAC - the Right Way to Start: a Guide for Physicians and Physicists, volume II Enis Ozyar , Merav Ben-David, 2024-10-30

MRI LINAC based radiation treatments are currently being used for selected patient populations and body regions and knowledge related to the outcomes of this modality is progressing The outcome and long term side effects in comparison with other modern LINAC are now being studied As contouring planning quality assessment and treatment assessment require new techniques for the use of all team members including technicians dosimetrists and physicians research reporting on these factors and each stage of the process is needed for medical professionals Furthermore as physicians report a low incidence of acute side effects with almost none for long term follow up this knowledge should be published in the radiation milieu The goal of this Research Topic is to collect and summarise the growing knowledge from institutions using MRI LINAC in order to share the obstacles solutions
