Seafloor Spreading Centers Peter A. Rona, Robert P. Lowell, 1980 *Hydrothermal Processes at Seafloor Spreading Centers* Peter A. Rona, Kurt Boström, Lucien Laubier, Kenneth L. Smith, 2013-11-21 During the past ten years evidence has developed to indicate that seawater convects through oceanic crust driven by heat derived from creation of lithosphere at the Earth encircling oceanic ridge rift system of seafloor spreading centers This has stimulated multiple lines of research with profound implications for the earth and life sciences The lines of research comprise the role of hydrothermal convection at seafloor spreading centers in the Earth's thermal regime by cooling of newly formed lithosphere oceanic crust and upper mantle in global geochemical cycles and mass balances of certain elements by chemical exchange between circulating seawater and basaltic rocks of oceanic crust in the concentration of metallic mineral deposits by ore forming processes and in adaptation of biological communities based on a previously unrecognized form of chemosynthesis The first workshop devoted to interdisciplinary consideration of this field was organized by a committee consisting of the co editors of this volume under the auspices of a NATO Advanced Research Institute ARI held 5-8 April 1982 at the Department of Earth Sciences of Cambridge University in England This volume is a product of that workshop The papers were written by members of a pioneering research community of marine geologists geophysicists geochemists and biologists whose work is at the stage of initial description and interpretation of hydrothermal and associated phenomena at seafloor spreading centers

The Architecture of Geodynamics Carroll L. Hoyt, 2002 Geothermal Energy United States. Dept. of Energy. Division of Geothermal Energy, 1982 **The Sea Floor** Eugen Seibold, Wolfgang H. Berger, 2013-06-29 Man's understanding of how this planet is put together and how it evolved has changed radically during the last 30 years This great revolution in geology now usually subsumed under the concept of Plate Tectonics brought the realization that convection within the Earth is responsible for the origin of today's ocean basins and continents and that the grand features of the Earth's surface are the product of ongoing large scale horizontal motions Some of these notions were put forward earlier in this century by A Wegener in 1912 and by A Holmes in 1929 but most of the new ideas were an outgrowth of the study of the ocean floor after World War II In its impact on the earth sciences the plate tectonics revolution is comparable to the upheaval wrought by the ideas of Charles Darwin 1809-1882 which started the intense discussion on the evolution of the biosphere that has recently heated up again Darwin drew his inspiration from observations on island life made during the voyage of the Beagle 1831-1836 and his work gave strong impetus to the first global oceanographic expedition the voyage of HMS Challenger 1872-1876 Ever since oceanographic research has been intimately associated with fundamental advances in the knowledge of Earth This should come as no surprise After all our planet's surface is mostly ocean Diagenesis in Sediments and Sedimentary Rocks, Volume 2 G.
