Essays on Strategy Analysis for Seaports Elvira Haezendonck, 2001 The increasingly competitive market environment in which port clusters operate today imposes new requirements on port strategy analysis Many port authorities and port operators now realize that a static approach to cost leadership a sole focus on inherited factor advantages and a simplistic reliance on new infrastructure to attract or retain clients are no longer sufficient to guarantee a port s competitive success They need to offer greater value added to port users as well as to society Hence this new market environment forces ports to

reconsider their present strategic position and to reflect on the strategic options for the future The book builds upon an in depth survey of economic actors in the Antwerp seaport cluster with a specific focus on the container and conventional cargo clusters It attempts to answer the question why these particular port clusters are more competitive than similar clusters in other ports In order to answer this question the study develops and extends a number of formal tools of strategy analysis that should be useful to both port authorities and port operators Transnational Dynamics in Southeast Asia Nathalie Fau,Sirivanh Khonthapane,Christian Taillard,2014 Since the 1990s regional organizations of the United Nations and international financial institutions have adopted a new dynamic of transnational integration within the framework of the regionalization process of globalization In place of the growth triangles of the 1970s a strategy based on transnational economic corridors has changed the scale of regionalization **Dynamics in Logistics** Herbert Kotzab,Jürgen Pannek,Klaus-Dieter Thoben,2015-12-21 This contributed volume brings together research papers presented at the 4th International Conference on Dynamics in Logistics held in Bremen Germany in February 2014 The conference focused on the identification analysis and description of the dynamics of logistics processes and networks Topics covered range from the modeling and planning of processes to innovative methods like autonomous control and knowledge management to the latest technologies provided by radio frequency identification mobile communication and networking The growing dynamic poses wholly new challenges logistics processes and networks must be able to rapidly and flexibly adapt to constantly changing conditions The book primarily addresses the needs of researchers and practitioners from the field of logistics but will also be beneficial for graduate students *Engineering Analytics* Luis Rabelo,Edgar Gutierrez-Franco,Alfonso Sarmiento,Christopher Mejía-Argueta,2021-09-26 Engineering analytics is becoming a necessary skill for every engineer Areas such as Operations Research Simulation and Machine Learning can be totally transformed through massive volumes of data This book is intended to be an introduction to Engineering Analytics that can be used to improve performance tracking customer segmentation for resource optimization patterns and classification strategies and logistics control towers Basic methods in the areas of visual descriptive predictive and prescriptive analytics and Big Data are introduced Industrial case studies and example problem demonstrations are used throughout the book to reinforce the concepts and applications The book goes on to cover visual analytics and its relationships simulation from the respective dimensions and Machine Learning and Artificial Intelligence from different paradigms viewpoints The book is intended for professionals wanting to work on analytical problems for Engineering students Researchers Chief Technology Officers and Directors that work within the areas and fields of Industrial Engineering Computer Science Statistics Electrical Engineering Operations Research and Big Data The Economic Importance of Seaports United States. McCalla, Brian Slack, 2016-05-23 Seaport gateways and the corridors which connect them to widely dispersed hinterlands are of vital and essential importance to international trade and the world economy Distributing goods to ultimate land destinations or bringing the goods to seaports from inland origins is organizationally complex involving multiple actors This book furthers understanding about how this movement is organized the role of ports acting as gateways and the actions of corridor players A key question that confronts the shipping and port industries as well as public authorities is how to increase the benefits of maritime trade to the companies and institutions directly involved as well as the port city regions where the transfers take place This question is being posed in the midst of a global economic recession and trade downturn and in the context of contemporary policy frameworks whose goals are to generate economic benefits and efficiencies rather than to maximize traffic volumes This book puts into perspective the reality opportunities and challenges facing seaport gateways and corridors now and in the future *ECMT Round Tables Land Access to Sea Ports* European Conference of Ministers of Transport, 2001-01-25 In recent years the substantial expansion in containerisation the advent of megacarriers the race for ever larger container ships and higher volume flows have revolutionised intercontinental transport These changes have entailed considerable **Business and Non-profit Organizations Facing Increased Competition and Growing Customers' Demands** Adam Nalepka, Anna Ujwary-Gil, 2017 From the perspective of commercial and non commercial organizations this monograph with contemporary organizational and management problems focus on four thematic areas Traditionally the first one is concentrating the reader's attention on the internal aspects of the organization's functioning as an object of research In this regard articles related to the concept of corporate social responsibility in two ways organizational research and bibliometric analysis The authors used an analogical bibliometric approach to examine trends in publishing for the concept of learning organizations In this part of the discussion the social aspect has been strongly displayed also thanks to the social capital and enterprise Another topic in this section is the role of the workers' knowledge in creating innovative solutions emphasizing the role of trust and culture rich collaboration between employees employees participation in creating projects and organizational change In addition it discusses the role of information and knowledge networks and sharing knowledge among employees which does remain without influence on the shaping of individual employees' careers Slightly different from the other articles though set in this section there is an article referring to the organizational pathology These considerations are much more valuable usually because of the difficult access to negative information The next section presents articles in the context of the modern tools used in the management of commercial and non commercial organizations This part of the discussion starts an article about forecasting methods and modern models of business management In opposition to these considerations the problem of unused modern management methods in the local government sector remains valid Also it refers to social media as a source of customer knowledge and management control which should be considered as a strong and innovative determinant influencing the development of

contemporary management methods of a modern enterprise Interesting considerations are included in the article on the process management with emphasis on the dynamic management of business processes and IT systems that go with it The other articles present the concepts of the risk management model in a technology project business model used in franchising and the concept of accountability in conjunction with the development of innovation thanks to negotiating the role of intellectual capital The modern market economy forces organizations to develop their ability to adapt to the conditions by improving their organization continually It shows how modern day commercial and non commercial organizations are competing in a competitive market This section opens the article referring to the social competences of students developed during their studies and the competences of the future which were studied and compared in two universities The integral part of the organization s functioning of the organization in the environment is their broadly understood cooperation for the implementation of the objectives and achieving a competitive advantage in the market This trend covers articles referring to the participation of county in networking modeling synergistic interrelations within the business association or the conditions that should be met between enterprises and institutions supporting the technological development of the organization Other considerations concern customer preferences concerning their choice of commercial banks the factors that determine the choice of financial instruments by small and medium enterprises or the demands of sustainable family business development The final part of the articles is related to a broader perspective and so the functioning of the organization from a sectoral perspective and across industries A distinctive feature is a sectoral approach to knowledge based business services the determinants of knowledge based products in the pharmaceutical industry and the behavior of competing companies in the chocolate and confectionery industry A separate topic in this section is the concept of capturing value or the value in a sectoral approach The issues related to the protection of personal data in the healthcare sector patent activity of enterprises in the technology park as well as the management of resources in the cluster The prepared monograph is an interdisciplinary compendium of knowledge on the functioning of both commercial and non commercial organizations in the context of three perspectives micro meso and macro The advantage of this type of studies is modern and up to date look at the problems of management organization behavior or the functioning of the organizations in the sector
